KH

II.4: BSC – FINANCIAL PERFORMANCE

OVERVIEW

LAWA tracks financial performance indicators to ensure that the business aspects of running LAX are effectively maintained. Many of these metrics merit considerable attention at the executive and BOAC levels, because they are important indicators of the overall financial health of the airport. The performance indicators in this chapter cluster into the following topics:

Focus	Purpose of Metrics	Topics in this Chapter
LAWA's financial risk and financial competitive position	Metrics associated with managing the operation of the business aspects of being an airport are fiscally sound.	▪ Financial Risk ▪ Revenue Sources o Financial Competitive Position o Non-Aeronautical Revenue Generation
Accounting's operational cost management performance	Metrics associated with ensuring that accounting operations (e.g., Accounts Payable and Receivable) are well managed.	▪ Operational Cost Management ▪ Accounting Operations Efficiency
Risk management	Metrics associated with ensuring that risks are being insured and managed cost-effectively.	▪ Insurance Program Management

The financial data are stored and reported through SAP, which has been LAWA's enterprise financial system since 2000. Therefore, most of the metrics have historical trend data. As a result, this BSC is an example of a best practice at LAWA and can serve as a model for other divisions on how to use data.

The Financial BSCs can serve as a model for other divisions on how to use trend data and ratios to report on performance.

FINANCIAL RISK

Financial risk is the risk associated with whether LAWA will be able to continue to pay its current and future operating costs and debt service obligations. Table II.4a displays the metrics that LAWA uses to answer that question and its current performance.

KH

Table II.4a: Financial Risk Measurements and LAWA Performance

Focus	Description and Significance	LAWA Financial Performance
Senior lien bond ratings	The ratings from nationally recognized, independent, third-party rating agencies (Fitch, Moody's, and S&P) indicate LAWA's ability to pay off its outstanding bonds.	Since these ratings have been tracked, LAWA has maintained AA (Fitch), Aa3 (Moody's), and AA (S&P) ratings.

Senior Lien Bond Ratings

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Fitch Ratings	AA	AA	AA	AA	AA	AA	AA	AA	AA	AA
Moody's Investor Service	Aa3	Aa3	Aa3	Aa3	Aa3	Aa3	Aa3	Aa3	Aa3	Aa3
S&P	AA	AA	AA	AA	AA	AA	AA	AA	AA	AA

Total debt service coverage ratio	The number of times LAWA's net operating income (before depreciation/amortization) could cover LAWA's annual debt payment; shows the health of the airport's operating margins.	LAWA's current coverage exceeds 2.5 times the debt payment.

Total Debt Service Coverage Ratio

Note: 1.25x coverage required by indenture; >/= 1.75x preferred

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Total Debt Service Coverage	2.96	4.13	4.97	5.05	3.13	2.54	2.61	3.02	3.28	2.54

$ cash on hand	The number of days of operating expenses payable from available cash held in LAWA's accounts at fiscal year-end indicates how long a revenue interruption the airport can sustain.	LAWA meets or exceeds its 365-day target.

KH

Focus	Description and Significance	LAWA Financial Performance

Days Cash on Hand

Note: 365 days informally targeted at LAWA

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Days cash on Hand	405	299	305	391	401	449	424	407	365	412

$ debt per enplaned passenger (EPAX)	Existing debt per EPAX, an industry-standard metric and a relative measure of leverage comparable to other peer airports, is one measure of capital capacity.	During the past 5 years, LAWA has been between $113 and $119 per EPAX.

Debt Per Enplaned Passenger

Note: Most large hubs are in a range between $125 and $175

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Debt per Enplaned PAX	$ 7.77	$ 7.32	$ 6.81	$ 36.37	$ 88.39	$ 119.56	$ 113.32	$ 116.49	$ 116.00	$ 119.05

REVENUE SOURCES

As discussed in the "Executive Summary," total operating revenue is $1.1 billion; LAX accounts for 93% of it. The majority of LAX's revenue (66%) is from rentals, landing fees, and other aeronautical sources. The balance (34%) is from concessions and parking, as shown in Table II.4b.

KH

Table II.4b: LAX Revenue Sources (2015)

LAX Revenue Sources	Revenue ($000s)	% of Total
Rentals / Other Aeronautical	$460,338	44%
Landing Fees	$227,518	22%
Terminal Concessions	$166,745	16%
Non-Terminal Concessions (except Parking)	$101,534	10%
Parking	$85,803	8%
Other Concession	$3,862	>1%
Total	**$1,045,800**	**100%**

The next two sections discuss LAWA's financial competitive performance, including competitive position to enable LAX in particular to generate aeronautical and non-aeronautical revenues.

FINANCIAL COMPETITIVE PERFORMANCE

The financial competitive position indicates where LAX stands as an international airport. Table II.4c displays the metrics LAWA uses to track its competitive position financially, as well as its performance.

Table II.4c: Financial Competitive Position Measurements and LAWA Performance

Measurements	Significance	LAWA Competitive Position Performance
# LAWA annual enplanements	Growing enplanements is a sign of operational and competitive health.	Since the last IEA Survey in 2008, LAX's enplanements have increased from 31,142 in 2008 to 36,114 in 2015 – a 16% percent increase. In 2014, LAWA moved up in ranking from 3 to 2.

Number of Annual Enplanements (000s)

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Enplanements	30,655	30,803	31,142	28,329	29,003	30,281	31,519	32,524	34,334	36,114

KH

Measurements	Significance	LAWA Competitive Position Performance
Annual U.S. enplanement ranking	Ranking is an indicator of the airport's importance in the national air service market.	Rankings generally do not fluctuate much year-to-year. Within the U.S., LAX ranks: ▪ No. 2 in enplanements, after an 8-year trend of ranking No. 3 ▪ No. 3 in number of take-offs and landings (708,674 in 2014, an increase of 1.4% over 2013) ▪ No. 4 or No. 5 in air cargo tonnage processed Worldwide, LAX ranks: ▪ No. 5 in number of arriving/departing passengers o Atlanta is No. 1. o Beijing is No. 2 and gaining on Atlanta's ranking. o Dubai is gaining on LAX's ranking. ▪ No. 3 in number of take-offs and landings (i.e., aircraft movements) ▪ No. 14 or No. 15 in air cargo tonnage processed

National Enplanement Ranking

Goal: Maintain position in top 3

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Annual National Enplanement Ranking	3	3	3	3	3	3	3	3	2	n/a

$ annual reconciled landing fee	Relative changes show the trend for the cost of bringing an aircraft into the Los Angeles market.	LAX's landing fees have ranged between $4.06 and $4.37 during the last 5 years. Landing fees are important to contain and ensure competitiveness with other airports. Forecasts at some large airport hubs are beginning to trend toward the high $20s. LAX's level will be a function of future projects. Stability is as important as the absolute level for LAX (avoid single year volatility). While an uptrend is less competitive, constraints are largely related to airlines' appetites for further capital improvements and the profitability of routes connecting to the airport.

KH

Measurements	Significance	LAWA Competitive Position Performance

Airport Landing Fee

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Reconciled Landing Fee	$ 2.86	$ 3.01	$ 3.42	$ 3.88	$ 3.74	$ 4.06	$ 4.24	$ 4.37	$ 4.33	$ 4.27
Annual Growth Rate		5.2%	13.6%	13.5%	-3.6%	8.6%	4.4%	3.1%	-0.9%	-1.4%

$ annual cost to the airlines per EPAX	Annual cost per EPAX is one indicator of a passenger air carrier's unit cost for operations at an airport.	EPAX annual cost has moved from $11.36 in 2011 to $14.18 in 2015 at LAX.

Cost Per Enplaned Passenger

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Cost per Enplanement	$ 7.02	$ 6.93	$ 8.91	$ 11.27	$ 10.84	$ 11.36	$ 12.18	$ 12.31	$ 13.50	$ 14.18

KH

LAWA does not appear to put much emphasis on cargo, beyond efforts to lease facility space. LAWA's Law Enforcement & Homeland Security Division works on cargo security, but mostly from a terrorist prevention standpoint and in cooperation with the carriers to prevent theft. Beyond that, cargo is primarily the responsibility of the air carriers.

NON-AERONAUTICAL REVENUE GENERATION PERFORMANCE

Non-aeronautical revenue provides LAWA with diversification from the airline industry, including terminal and non-terminal revenues generated (displayed in Table II.4d). It is also a source of revenue available to increase margins beyond the "break-even" cost recovery formulas used to calculate airline rates and charges.

Table II.4d: Non-Aeronautical Revenue Measurements and LAWA Performance

Measurements Used	Significance and LAWA Risk Performance
▪ **% non-aeronautical revenue of total revenue**	Annual non-aeronautical revenues as a percent of total operating revenues indicate the level of diversified revenues source outside of airline counterparts. LAWA's current non-aeronautical revenue as a percent of total revenue ranges between 34.2% and 34.7% during the last 5 years. LAWA has set a target of >/= 40%, but indicates that it is not likely to achieve that target.

Non-Aeronautical Revenue as a Percentage of Total Revenue

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Non-Aero Revenue as % of Total	39.4%	42.7%	40.4%	38.0%	34.6%	34.7%	34.3%	35.5%	34.6%	34.2%

This non-aeronautical revenue can be further analyzed by revenue generated within the terminals and revenue generated outside of the terminals.

Non-Aeronautical, Terminal-Related Revenue

Table II.4e displays LAWA's measurements and performance regarding non-aeronautical revenue within the terminals.

Table II.4e: Non-Aeronautical, Terminal Revenue Measurements and LAWA Performance

Measurements Used	Significance and LAWA Risk Performance
▪ $ annual terminal-related concession revenue	The annual terminal-related concession revenue shows the relative increase or decrease of revenue produced by passengers via services inside the terminals. Annual terminal-related concession is significant, $166.7 million in 2015. The uptrend is important. LAWA has set a 10-year annualized growth rate target of approximately 4.5%, inclusive of new facilities. LAWA has exceeded that target for the last three years.

KH

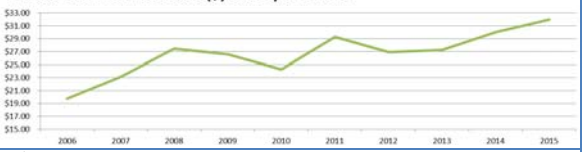
Measurements Used	Significance and LAWA Risk Performance

Annual Terminal-Related Concession Revenue ($000s)

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Terminal Concession Revenue	$ 79,932	$ 94,456	$ 110,573	$ 107,035	$ 101,340	$ 122,522	$ 126,191	$ 141,672	$ 154,374	$ 166,745
Revenue Growth	-1.3%	18.2%	17.1%	-3.2%	-5.3%	20.9%	3.0%	12.3%	9.0%	8.0%

▪ $ annual terminal revenue per square foot	Ratios are useful for understanding terminal revenue generated. Annual terminal related concession revenues per square foot show the relative efficiency of the concession operations in the terminal, particularly to ensure that LAWA is making the highest and best use of its space. An upward trend is positive.

Annual Terminal Revenue ($) Per Square Foot

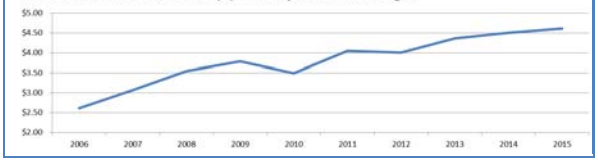


▪ $ annual terminal revenue per EPAX	Ratios are useful, particularly for understanding EPAX spending patterns, particularly because passengers tend to buy more before they board airplanes rather than after they arrive at airports, as discussed in Chapter II.1. Annual terminal-related, concession revenues per EPAX shows the efficiency of concession operations relative to the passengers served. An upward trend is positive.

KH

Measurements Used	Significance and LAWA Risk Performance

Annual Terminal Revenue ($) Per Enplaned Passenger



Non-Aeronautical, Non-Terminal Related Revenue

Non-terminal revenue is generated by concession, parking, and ground transportation services outside of the terminals, but by LAWA, as displayed in Table II.4f.

Table II.4f: Non-Aeronautical, Non-Terminal Revenue Measurements and LAWA Performance

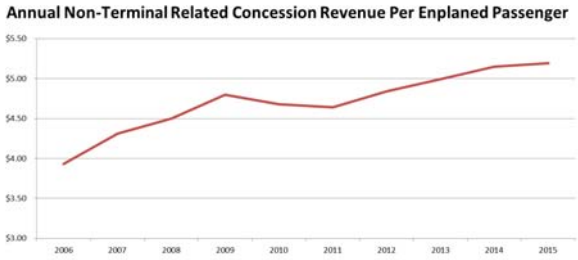
Measurements Used	Significance and LAWA Risk Performance
▪ $ annual non-terminal-related concession revenue	The annual non-terminal related concession revenue shows the relative increase or decrease of revenue produced by guests via services outside of the terminals. Annual non-terminal related concession is significant, $187.3 million in 2015. Parking represents a significant portion of the revenue – $85 million last year. The uptrend is important. LAWA anticipates setting a 10-year annualized growth rate target of +5%, inclusive of opening and closing facilities.

KH

Measurements Used	Significance and LAWA Risk Performance

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Non-Terminal Concession Revenue	$ 120,632	$ 132,721	$ 140,122	$ 136,061	$ 135,571	$ 140,673	$ 152,576	$ 162,467	$ 176,937	$ 187,337
Revenue Growth	6.3%	10.0%	5.6%	-2.9%	-0.4%	3.8%	8.5%	6.5%	8.9%	5.9%

▪ $ annual non-terminal revenue per EPAX	Ratios are useful, particularly for understanding spending patterns. Annual terminal-related concession revenues per EPAX show the efficiency of concession operations relative to the passengers served. An upward trend is positive.



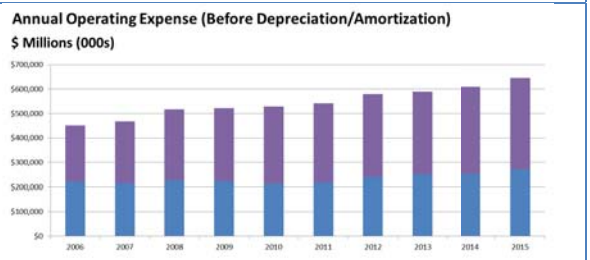
KH

OPERATIONAL COST MANAGEMENT PERFORMANCE

Operational cost management measures LAWA's success in controlling growth in operating expenses. Uncontrolled growth can erode net income available to pay debt service. LAWA tracks metrics addressing operational cost management, focusing primarily on annual operating expenses, EPAX, and employee headcount. LAWA uses these metrics to report both actual performance and as ratios to EPAXs and operating expenses compared to inflation. These metrics are important to ensure that LAWA will continue to remain financially viable. Table II.4g displays the key metrics that are tracked.

Table II.4g: Financial Operations Measurements and LAWA Performance

Measurements Used	Significance and LAWA Financial Operations Performance
Operating Expenses	
Operating expense trends are more important than the absolute level for LAX. An uptrend is less competitive; thus, LAWA should strive to contain annualized expenditure growth during the next 10 years.	
▪ $ annual operating expense before depreciation ▪ $ annual year-over-year operating expense growth rate	Annual operating expenses before depreciation show the annual costs of operating and maintaining the airports. Annual year-over-year operating expense growth rate is useful for comparing operating costs to inflation – an important factor in meeting financial projections. LAWA's annual operating expenses increased 24.7% from $517.7 million in 2008 to $645.4 million in 2015. A LAWA goal for annual operating expense before depreciation is to maintain levels below 5.5%, inclusive of new facilities (4% average + 1.5% for new facilities).



$ Millions (000s)

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Operating Expense	$ 451,324	$ 468,524	$ 517,732	$ 522,911	$ 529,552	$ 541,228	$ 580,160	$ 589,430	$ 610,027	$ 645,398
LAX Operating Expense Growth	10.6%	3.8%	10.5%	1.0%	1.3%	2.2%	7.2%	1.6%	3.5%	5.8%

KH

Measurements Used	Significance and LAWA Financial Operations Performance
▪ $ annual operating expense per EPAX	Annual operating expense per EPAX relates the cost of operating the airport relative to the volume of passenger traffic served. Most airports are in the $11 to $15 range, but SFO is higher at $17.50. At $17.87 in 2015, LAX is currently on the highest end of operating cost per enplanement, and should target maintaining or decreasing its current level.

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Cost per Enplanement	$ 7.02	$ 6.93	$ 8.91	$ 11.27	$ 10.84	$ 11.34	$ 12.18	$ 12.31	$ 13.90	$ 14.18

▪ $ annual employee headcount ▪ $ annual year-over-year employee headcount growth	Annual employee headcount is the number of employees employed by LAWA and may illustrate management's progress in controlling personnel costs – to the extent that they are able, given Civil Service constraints. Annual year-over-year employee headcount growth shows the absolute level of employee growth. LAWA focuses on trends. An uptrend is less competitive. LAWA's goal is to maintain level or marginally decrease overall headcount through attrition.

KH

Measurements Used	Significance and LAWA Financial Operations Performance

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Employee Headcount	2,849	3,004	3,181	3,220	3,105	3,144	3,200	3,168	3,141	3,170
LAX Employee Headcount Growth		5.5%	5.8%	1.2%	-3.6%	1.3%	1.8%	-1.0%	-0.2%	0.3%

▪ $ annual employee headcount per EPAX	Employee headcount per EPAX is useful in understanding the number of employees vis-à-vis the level of passenger traffic served. LAWA regards flat or decreasing levels as an indicator of management discipline. Headcount represents all workers at LAWA; the passenger count is LAX only.

	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
LAX Employees per Million PAX	92.9	97.7	102.1	113.7	107.1	103.8	101.5	97.4	92.1	87.8

KH

ACCOUNTING OPERATIONS EFFICIENCY

Indicators of accounting operations efficiency are related to accounts receivables, debt write-off, accounts payable processing, and ability to take advantage of discounts, as summarized in Table II.4h.

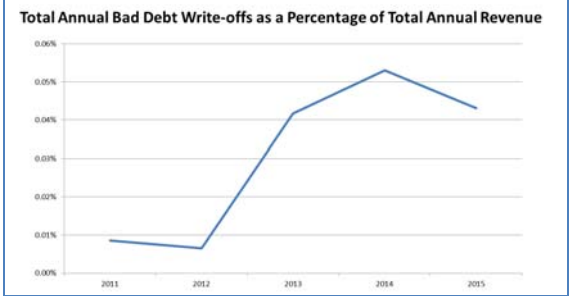
Table II.4h: Accounting Operations Measurements and LAWA Performance

Measurements Used	Significance and LAWA Financial Operations Performance
Accounts Receivable	
▪ # days/length of outstanding customer accounts	The number of days customer accounts are outstanding is an indicator of how quickly LAWA is collecting its receivables. A lower number is better. In 2015, the average number of days that customer accounts were outstanding was 13 days.

▪ $ bad-debt write-off	Total annual bad debt write-offs as a percent of annual revenue indicate how effective LAWA is in collecting its receivables. A lower percentage of bad debt write-off is better. Bad debt write-off is currently less than .05% of annual revenue.

KH

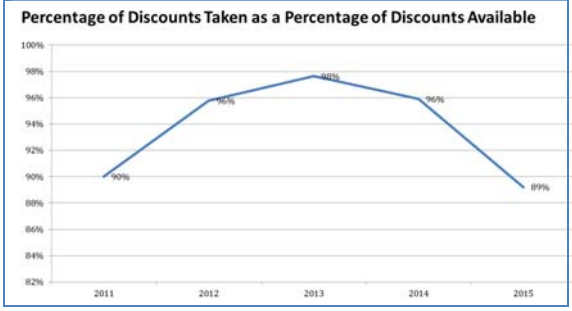
Measurements Used	Significance and LAWA Financial Operations Performance



Accounts Payable	
▪ # days/cycle-time for payment of invoices	The City has set a requirement that all invoices be paid within 30 days. A smaller number indicates faster processing time. Fewer days are better for improving vendor relations, retaining services, and obtaining competitive prices. LAWA counts the number of days for payment of an invoice upon receipt by Accounts Payable of a completed invoice. LAWA currently reports an average of 29 days.

KH

Measurements Used	Significance and LAWA Financial Operations Performance
▪ % discounts received for prompt payment ▪ $ value of discounts received for prompt payment	A higher percent indicates more discounts are taken against invoices. Over the past 5 years, LAWA has received between 89% and 98% of available discounts.



KH

INSURANCE PROGRAM MANAGEMENT

Insurance program management encompasses Workers' Compensation, property/casualty coverage, and general aviation liability.

Workers' Compensation

Table II.4i displays LAWA's measurements and performance vis-à-vis Workers' Compensation.

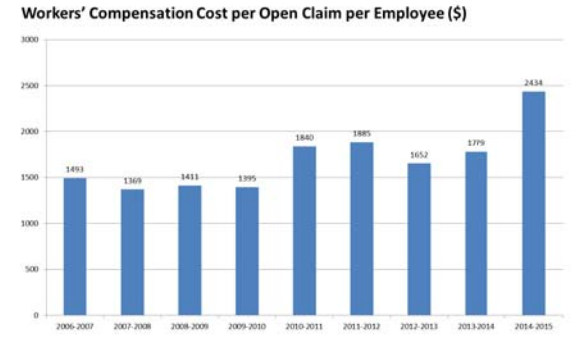
Table II.4i: Workers' Compensation Measurements and LAWA Performance

Measurements Used	Significance and LAWA Risk Performance
▪ $ Workers' Compensation claims per employee	Workers' Compensation claims per employee shows the trend in number of claims to monitor effectiveness of LAWA's program, separate from cost (which may not be within management's control). Decreasing trends in the number of Workers' Compensation claims are positive and indicative of effective program management.

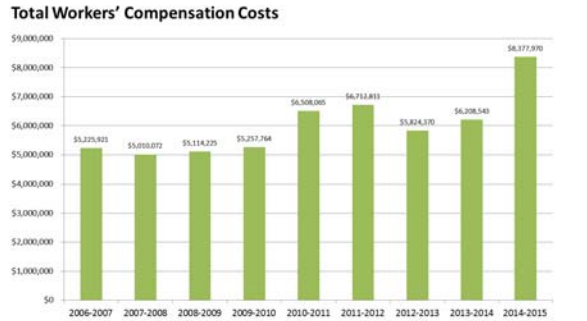
▪ $ Workers' Compensation cost per open claim per employee	Workers' Compensation cost per open claim per employee shows the trend in the average cost per claim over time and highlights external cost changes. Increasing trends are negative in terms of Workers' Compensation costs. Increases are largely due to changes in payment requirements under Workers' Compensation laws.

KH

Measurements Used	Significance and LAWA Risk Performance



▪ $ annual Workers' Compensation costs	Annual Workers' Compensation costs show the trend for overall costs year-to-year. Increasing trends in total Workers' Compensation costs are negative. Changes in total cost are influenced by the number of claims and payment requirements under Workers' Compensation laws.



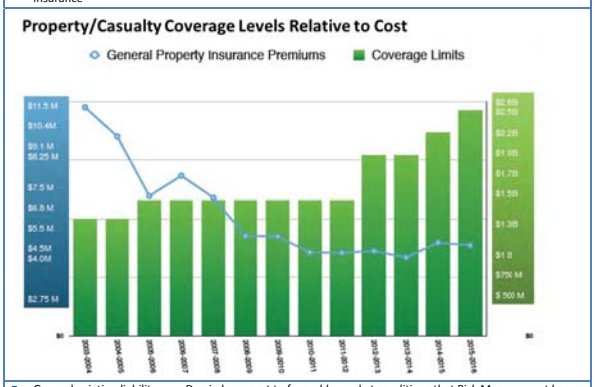
KH

Other Risk Management

The Risk Management Division tracks levels of insurance coverage relative to premiums paid for the coverage over time, as show in Table II.4j.

Table II.4j: Risk Management Measurements and LAWA Performance

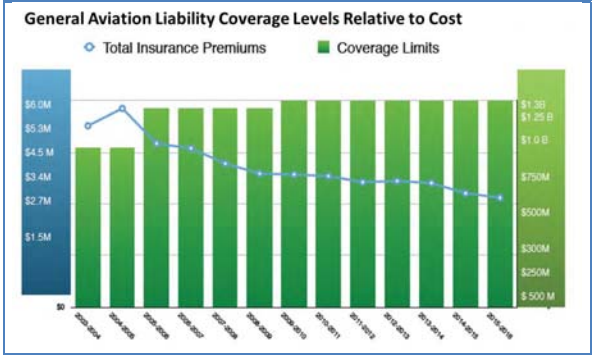
Measurements Used	Significance and LAWA Risk Performance
Insurance Coverage	
▪ $ property/casualty insurance coverage levels relative to cost ▪ $ aviation and terrorism insurance	Due in large part to favorable market conditions that Risk Management has taken advantage of, LAWA is getting greater coverage at a significantly reduced cost.



▪ General aviation liability coverage levels relative to cost	Due in large part to favorable market conditions that Risk Management has taken advantage of, LAWA is getting greater coverage at a significantly reduced cost.

KH

Measurements Used	Significance and LAWA Risk Performance



BALANCED SCORECARDS – FINANCIALS & RISK MANAGEMENT

The next pages display the BSCs that KH developed in collaboration with the Chief Financial Officer and Comptroller to meet LAWA's goal of financial stability and sustainability.

KH

II.5: BSC – ADMINISTRATION

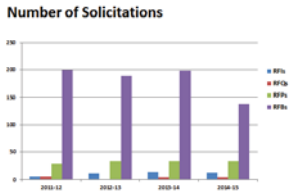
OVERVIEW

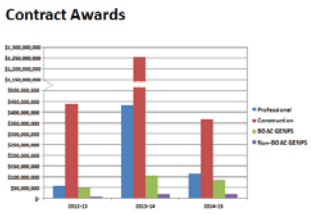
KH worked with several functions currently arrayed under the Deputy Executive Director, Administration, to develop BSCs for Procurement Services, Human Resources (HR) Services, and Internal Audit. Because of the nature of their services, these areas can affect all LAWA divisions. They each had a difficult time compiling the data for the BSCs because most of the indicators to be tracked required designing manual systems. Specifically:

- **Procurement Services** has not compiled performance metrics, and has only current information on cycle times.
- **Human Resources Services** is just now beginning to gather monthly cycle-time data and relies on manual data collection methods.
- **Internal Audit** has gathered 2014-2015 data.

PROCUREMENT SERVICES

The number of solicitations, particularly RFBs, has declined during the last four years, in part because of the Chief Executive Officer's newly approved authority to award multi-year contracts. Professional and Construction contract awards have comprised the bulk of LAWA's contracting due to the Modernization projects of the last few years. This trend will likely continue with the implementation of LAMP.





KH

While gathering data, Procurement defined several performance areas to track and identified potential issues to delve deeper into.

BOAC-approved Contracts take longer (5 months) than non-BOAC approved contracts. As shown in Table II.5a, LAWA has made a significant improvement in the number of days required for BOAC-approved professional services contracts since 2012-2013. Even with these improvements, the cycle times are still long; average cycle time for BOAC-approved contracts is approximately 5 months, from posting of solicitation on LABAVN to BOAC for authorization to award.

There are many potential causes for the extended time period for BOAC-approved contracts, including "delays" that do not apply to other contracts. The delays include City Attorney review, contract development and execution, alignment with the BOAC calendar and agenda review cycle, and City Council approvals, when required.

Table II.5a: Sample Procurement Measurements: Cycle Times for Contract Approval

Potential Measurements	LAWA Performance
▪ # days to complete BOAC-approved contracts ▪ # days to complete contracts that do not require BOAC approval	
LAWA may not be getting optimal pools of bidders; 58% of the solicitations receive only 1 or 2 bids and represent 60% of the awarded dollar value for Goods, Equipment, and Non-Professional Services (GENPs) in 2014-2015, as discussed in Chapter I.5 and shown in Table II.5b. The number of firms attending the "Doing Business with LAWA" has also decreased over the past 5 years.

KH

Table II.5b: Sample Procurement Measurements: Number of Bids and Vendor Training

Potential Measurements	LAWA Performance
▪ % solicitations with 3 or more bids ▪ $ solicitations with 3 or more bids	▪ # firms attending "Doing Business with LAWA" seminars	
Good metrics lead to good questions more than good answers. Without historical trend data on the number of bidders and additional information about how LAWA compares to City-wide success in this indicator, it is only possible to speculate on potential causes to this limited number of bidders. As discussed in Chapter I.5, LAWA has identified a number of potential barriers. LAWA will need to research and analyze the causes to recommend appropriate steps to take to increase the percent of multiple-bid solicitations.

At LAWA, the annual inventory count percent variance has been low in two years, but spiked in 2013-2014, as shown in Table II.5c. LAWA measures its performance against a variance standard of between 3% and 5%. Tracking these types of metrics will lead LAWA managers to raise questions and explore the causes.

KH

Table II.5c: Sample Warehousing Measurements

Potential Measurements	LAWA Performance
▪ % annual inventory count variance	
HUMAN RESOURCES (HR) SERVICES

Human Resources (HR) Services Division's mission is to:

- Onboard new employees
- Create and retain employee personnel records
- Provide guidance to management and LAWA employees
- Ensure EEO compliance with LAWA and City policies and State and Federal laws
- Assist in employee development through training and education
- Investigate misconduct and other disputes where necessary; partner with management and take action to address misconduct as necessary

HR Transactions

Finding. Human Resources (HR) Services maintains primarily transaction and volume data, as key indicators of workload.

Human Resources (HR) Services maintains a wide variety of numerical data. Most of the historical data involve volumes of transactions: volume of employee relations case work, volume of front counter interactions, number of employees on the attendance deviation program, and number of complaints filed monthly.

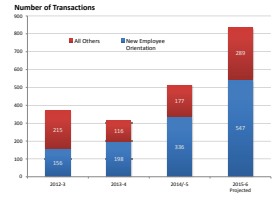
Number of transactions is one indicator of workload. HR has data on:

- # HR transactions, which have increased since 2013 and are anticipated to increase again in 2016
- # front-counter transactions, which have declined between 2014 and 2015
- # discipline cases handled

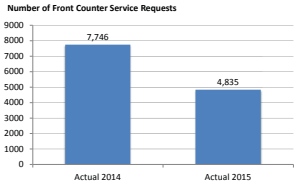
KH

- # EEO cases received
- # LAWA employees trained
- # new LAWA employees attending orientation

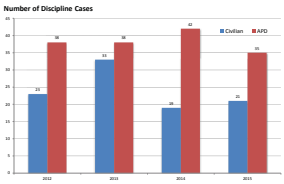
HR Transactions:
Request To Fill (RTF) Forms Processed



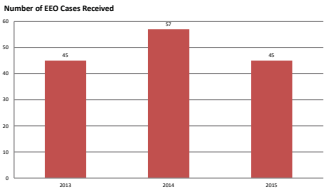
HR Front Counter Customer Experience



Total Discipline Cases

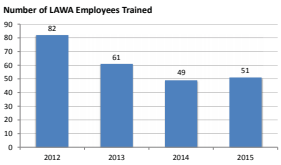


EEO Cases

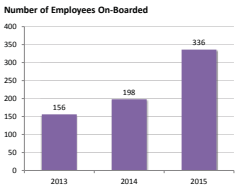


KH

Supervisor's Toolkit



New Employee Orientation



HR Cycle Times

Finding. Human Resources (HR) Services understands the value, but lacks cycle time data that would help it to provide better customer service.

During the course of the IEA Survey, HR conducted a survey of the HR staff members as part of an introspective effort to first evaluate itself. When asked, *"I understand the divisional goals and how I contribute to LAWA's overall purpose,"* 63% responded always, 24% responded usually, and 13% responded sometimes.

HR faced some challenges in compiling cycle-time data and launched an effort to gather such metrics as part of the IEA Survey. Cycle time tracking is only available through manual systems that are being designed as a result of this IEA Survey. Therefore, only one or two months' of data were collected for this IEA Survey Report. Ongoing gathering of the information will provide a baseline to establish improvement targets, and will permit analysis of the factors that affect the ability of HR to reach new targets. HR has plans to compile needed data in going forward.

Cycle times are being gathered in the areas most often cited by HR clients as areas of concern:

- # days to fill budgeted and non-budgeted positions
- # days to allocate a new position
- # days to establish a List of Eligible Candidates
- % discipline cases – civilian – where the HR review met turnaround 90-day goal
- % discipline cases –Law Enforcement & Homeland Security Division – where the HR review met turnaround 30-day goal
- % workplace violence cases getting timely review within 90 days after the initial threat assessment
- % EEO cases meeting case closure goals

KH

As a result of this data-gathering process with KH, HR management acquired a deeper appreciation that performance measurements are most helpful when one understands the logic and reasoning behind them and uses the metrics to answer the 'why' related to HR's performance in various service areas. Through this approach, HR can use its databases and trend data to improve and predict HR's future performance.

Human Factor Data

Finding. Human Resources (HR) Services identified key measurements for monitoring LAWA employee satisfaction and experiences.

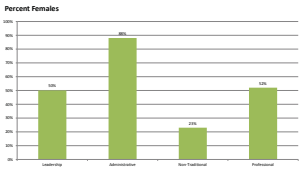
As a result of the IEA Survey, HR has identified a number of priority areas where gathering HR metrics will be useful in terms of understanding LAWA employees' satisfaction.

Orientation and supervisory training. HR recently solicited feedback on its New Employee Orientation course; on a scale of "1 to 5" with "5" being "High," 15% rated it 4, 85% rated it 5. Similarly, the end-of-course survey on the Supervisor's Toolkit training received a 4.7 on a scale of 5 in overall satisfaction. HR plans to track the effectiveness of the course from the point of view of the supervisors of those who took the course to determine whether improvements were noticed.

Employee satisfaction ratings. in the next fiscal year, budget permitting, HR is planning to launch a LAWA-wide questionnaire of employee satisfaction that will include questions from the employee questionnaire conducted by KH Consulting Group (KH) as part of the 2008 IEA Survey. Using the same questions will permit assessment of the change in employees' opinions over the past 8 years.

Gender equity. Gender equity has been a focus of Mayor Garcetti; LA City departments report on performance in non-traditional positions. Table II.5d displays LAWA's performance in terms of gender equity. Overall, 50% of the leadership is female; however, 23% of LAWA's workforce in non-traditional positions is female – an area HR plans to focus on.

Gender Equity In Non-Traditional Roles



KH

Table II.5d: Gender Equity, By EEO Category, at LAWA

Gender Equity Category	EEO Category	# Females	Total # of Employees	% Females
Leadership	Category A: Officials/Administration	54	109	50%
Administrative	Category E: Paraprofessionals	1	1	88%
	Category F: Administrative Support	298	339	
Non-Traditional	Category C: Technicians	22	151	23%
	Category D: Protective Service Workers	160	875	
	Category G: Skilled Craft Workers	7	423	
	Category H: Service-Maintenance	325	813	
Professionals	Category B: Professionals	261	503	52%

INTERNAL AUDIT

Internal Audit has been tracking metrics associated with:

- # hours expended in audits
- # training required for maintenance of certifications

In alignment with the recommendations included in Chapter I.3 for an expanded role of Internal Audit, the scorecard will also track:

- # audits identified as high risk that were completed
- % approved audit plan completed
- # recommendations implemented within the recommended timeframe
- # satisfaction rating with audits performed

BALANCED SCORECARDS – ADMINISTRATION

Given the data constraints, just discussed, the initial BSC developed for Procurement Services, Human Resources Services, and Internal Audit is in the following pages.

KH

II.6: BSC – INFORMED PUBLIC

OVERVIEW

There are many audiences and purposes for metrics gathered by public agencies. KH focused on strategic and executive/managerial aspects, as contrasted with comprehensive operational metrics used day-to-day. While most of these data and metrics are available to the public through the California Public Records Act (CPRA),[10] most residents are not likely to be interested in the level of detail that is reported in this IEA Survey report.

The Public can be divided into three separate groups:

- **Informed guests.** A key piece of the Guest Experience BSC is informed guests, already discussed in Chapter I.4 and Chapter II.3. The interests of guests and "meeters and greeters" largely lie in receiving real-time information about getting to and from flights, and knowing where to access concessions and amenities. LAWA is focusing on ensuring that the desired information is available through different communication channels and media.
- **Informed neighbors.** The surrounding communities will be interested in the environmental metrics and some of the economic development metrics gathered in the CSR BSC, covered in Chapter I.3 and Chapter II.2. The neighbors are most concerned about traffic and noise – both likely to be ongoing issues with all communities surrounding LAX. Moreover, noise will continue to be an important discussion due to the FAA's upgrade to a satellite system that is designed to reduce air traffic congestion with more direct and condensed routing into airports that will change noise contours. Therefore, it will be helpful for neighboring communities to understand the economic benefits of the airport – how many of their neighbors earn their livelihood because of LAX – to counterbalance the potential discomfort and inconvenience of noise and traffic disruptions.
- **LA city residents.** That leaves City residents, who are not traveling to and from the airport and who are not neighbors of the airport. As taxpayers, and as responsible Angelenos, they will want to be certain that:
  - LAWA is being operated safely, effectively, fairly, and efficiently.
  - The economic benefits of the airport are being managed well.
  - The negative environmental impacts are closely watched and managed.

  At the same time, the public does not want to be required to review a large number of indicators. This section suggests a BSC listing a handful of important metrics that might be of interest to those residents.

10 http://www.thefirstamendment.org/publicrecordsact.pdf

KH

The areas of greatest interest to the public regarding LAWA are:

- **LA Image and Reputation** – LAWA as a great asset that promotes a positive image of Los Angeles as an international gateway
- **Economic Impact** – LAWA as an economic engine for LA City
- **Environmental Responsibility** – LAWA as a responsible environmental citizen
- **Effective Management** – LAWA as an effectively managed City department
- **Efficient Management & Operations** – LAWA as an efficiently managed City department
- **Fiscal Responsibility** – LAWA as a well-run business

Table II.6a presents a roadmap of where LAWA would locate the metrics for building an Informed Public scorecard for these areas of greatest interest to the public. LAWA will want to display the data in user-friendly ways – graphs, trend lines, etc.

Table II.6a: Roadmap for Building an Informed Public Balanced Scorecard, Linked to Sample Goals and Potential Measurements

#	Scorecard Source	Measurement Description
LA Image and Reputation		
Goal: LAWA as a great asset that promotes a positive image of Los Angeles as an international gateway		
	Finance	# LAX ranking among world airports
	Guest Experience	# guest satisfaction ratings
	Guest Experience	# non-stop flights in U.S. and internationally
	Guest Experience	# international cities and foreign countries served
	Finance	# LAX ranking among world airports
	Guest Experience	# criminal complaints
Economic Impact		
Goal: LAWA as an economic engine for LA City		
	CSR	# total direct and indirect jobs created by LAWA
	CSR	# total direct and indirect revenues generated by LAX (TOT, POT, sales tax, etc.)
Environmental Responsibility		
Goal: LAWA as a responsible environmental citizen		
	CSR	# year-over-year changes in GHG emissions
	CSR	# year-over-year changes in water usage
	CSR	# GHG emissions per MAP
	CSR	# GHG ranking of LAX as a domestic airport (if available)
Effective Management		
Goal: LAWA as an effectively managed City department		
	NA	# runway incursions or other airplane safety issues

LAMP-AL00008

KH

#	Scorecard Source	Measurement Description
	CSR	# citations by regulatory agencies
Efficient Management & Operations		
Goal: LAWA as an efficiently managed City department		
	Finance	# LAX employees per MAP
	Finance	$ cost per enplaned passenger (EPAX)
	NA	$ construction cost overruns
Fiscal Responsibility		
Goal: LAWA as a well-run business		
	Finance	LAWA debt rating
	Finance	$ LAWA operating expenses per EPAX
	Finance	$ LAWA revenues

NA = Available at LAWA, but not in any of the BSC prototypes that KH developed.

BALANCED SCORECARDS – INFORMED PUBLIC

The next pages display the BSC that KH developed for an "Informed Public," based on available data at the time of this IEA Survey.

Industrial, Economic, & Administrative (IEA) Survey Report of Los Angeles World Airports (LAWA)

Part III: Implementing and Monitoring

KH Consulting Group (KH), 1901 Avenue of the Stars, Suite 200, Los Angeles CA 90067
Telephone: 310/203-5417 FAX: 310/203-5419 Email: gayla@khcg.com Web Site: www.KHConsultingGroup.com

KH

III.1: IMPLEMENTATION PLAN

This chapter outlines the steps to be taken to implement the IEA Survey Report recommendations and monitor progress. Many of the recommendations complement and build on each other. Therefore, they should be implemented systematically.

Step 1: Review and Accept Recommendations in Principle

In most areas, KH has outlined proposed actions in the recommendations without being too prescriptive regarding the details. Most important is LAWA's commitment to continual improvement and evidence-based management in its quest to be competitive and world class. The recommendations set forth a pathway for implementing change and continual improvements.

The Joint-Administrators, BOAC, and LAWA executives should review each recommendation in Part I and Part II. They should accept the recommendations in principle or modify them as suggested by group consensus or as required to meet specific constraints, such as availability of resources. Each recommendation should be accepted, rejected, or modified; none should be ignored.

The City should request that LAWA's CEO provide feedback regarding LAWA's planned actions regarding the IEA Survey recommendations within 90 days of issuance of the IEA Survey Report.

Step 2: Assign an IEA Project Manager to Monitor Implementation

The importance, scope, and interrelationships of the recommended changes require centralized attention and monitoring to ensure a successful outcome. With the support of LAWA's CEO, LAWA's Internal Audit could be appointed as the IEA Project Manager to handle supervision, coordination, and monitoring of implementation efforts across LAWA Divisions.

Step 3: Appoint Implementation Managers and Develop Implementation Plans

At this point, the final priorities, timelines, and accountabilities can be set. For each recommended change, the IEA Project Manager – in consultation with the LAWA's CEO and executives – should assign an Implementation Manager with responsibility for it. The intent is to suggest ultimate responsibility; certain aspects may be delegated to individuals below the level of the Implementation Manager.

LAWA should also establish the relative priority and timing for implementing each recommendation. All recommendations should be started in the next six months to two years. In most cases:

- Implementation of the recommendations with immediate priority should commence as soon as possible.
- Intermediate priority recommendations can be deferred until action of the higher priority recommendations is under way.
- In some cases, lower priority recommendations may be implemented earlier because they are easy to accomplish and may result in some "quick victories."

KH

- Other high priority recommendations may be implemented later once LAWA has established more of a foundation for success.

The Implementation Managers should prepare an Implementation Plan for each recommendation. Cost implications should be refined at this point, depending on the course of action the LAWA executives and management adopt. Exhibit III.1a displays the kind of information that each Implementation Plan should contain at a minimum.

Exhibit III.1a: Implementation Plan Format

Statement of the Recommendation I.X:		
Source: IEA Survey, Chapter X, page X.		
Implementation Manager with Overall Responsibility:		
Performance Objective (Specific, Measured, Achievable, Relevant, and Timing):		
Priority (High, Medium, Low):		
Action Steps	Assigned Responsibility	Scheduled Start-End Dates
1.		
2.		
…		
Etc.		

A defined performance objective is a statement of the expected situation or condition after implementation of the recommendation. This objective should serve as a benchmark to measure accomplishment of the associated recommendation.

The IEA Project Manager and appropriate LAWA executives should review and approve each plan.

Step 4: Begin Implementation and Monitor Progress

Once the Implementation Plans are approved, the action steps should begin. Each Implementation Manager should prepare a quarterly, one-page report concerning the progress of each plan (i.e., recommendation) for the IEA Project Manager. In turn, the IEA Project Manager should summarize these quarterly reports for the LAWA CEO and executives, BOAC, Office of the Controller (Controller), and Joint-Administrators. As Implementation Managers identify adjustments necessary to the plans, they should consult with the IEA Project Manager and note the needed adjustments on their progress reports.

KH designed the "LAWA IEA – Implementation Tracking Summary.xlsx," an Excel spreadsheet template for ongoing reporting purposes within LAWA, to the Controller, and with the Joint Administrators. The fields provide basic background and context for each recommendation and are taken directly from the IEA Survey and the Implementation Plans prepared by the Implementation Managers. These fields should remain unchanged once set and agreed upon:

KH

- ***#/Source*** – Chapter and section number from the IEA Survey Report
- ***Area*** – Chapter name from the IEA Survey Report
- ***Recommendation*** – Shortened label for recommendation
- ***Recommendation Description*** – Full recommendation description from the IEA Survey Report
- ***Priority*** – High, Medium, or Low; based on discussions and the Implementation Plan
- ***Accountability*** – Implementation Manager responsible for the recommendation
- ***Performance Objective*** – Specific, measurable outcome for the recommendation from the Implementation Plan
- ***Planned Start*** – Planned start date for first action from the Implementation Plan
- ***Planned Completion*** – Planned completion date for final action from the Implementation Plan

Table III.1b: Planning Fields in LAWA IEA – Implementation Tracking Summary

#/ Source	Area	Recommendation	Recommendation Description	Priority	Accountability	Performance Objective
I.2.3	Strategy and Accountability	Balanced Scorecards	LAWA should implement a Balanced Scorecard (BSC) approach as a performance management system	High	IEA Project Manager	All divisions have BSCs by December 2016

To provide ongoing summary updates, the IEA Project Manager updates the following fields based on the quarterly reports provided by each Implementation Manager. These fields provide the ongoing status updates for each recommendation over time:

- ***Actual Start*** – Actual start date of first action, based on quarterly reports
- ***Actual/Estimated Completion*** – Adjusted estimate or actual completion of final action, based on quarterly reports
- ***Date Updated*** – Last date that an update was provided and entered into the Implementation Tracking Summary
- ***Notes*** – More detailed and qualitative explanations of challenges, progress, updates, etc.

An example of the table is provided below:

Table III.1c: Progress Monitoring Fields in LAWA IEA – Implementation Tracking Summary

Planned Start	Actual Start	Planned Completion	Actual/Estimated Completion	Date Updated	Notes
7/1/16	7/1/16	4/1/17	4/1/17	10/1/16	All divisions have convened working groups that have been trained on BSCs and have begun drafting measurements for BSCs in the provided formatting

For ease of reading, the "Actual/Estimated Completion" field will automatically format based on the updated status compared to the plan, to highlight the need for managerial action, shown in Table III.1d.

KH

Table III.1d: Actual/Estimated Completion Format

Actual/Estimated Completion Formatting	Managerial Action
Complete, on-time or ahead of schedule	No action needed
Incomplete, on-time or ahead of schedule	Ensure on-time completion
Complete, behind schedule	Follow-up to determine why recommendation was not completed to plan
Incomplete, behind schedule	Determine actions or resources needed to improve completion time or quality

There will be instances that the planned completion date will need to be adjusted, avoiding highlighting items as incomplete, when all have agreed that a later date is desirable. The IEA Project Manager will make the adjustments after discussion with the Implementation Manager and reviewing all changes with the executive team and, if necessary, with the Controller and Joint Administrators. Such changes should be done wisely, and not just to move a date a month or two to generate the appearance of compliance.

The LAWA CEO should give an annual oral report to BOAC regarding progress to date in implementing the IEA Survey recommendations. The Joint-Administrators will need to determine what level of involvement they intend to have during the implementation process. At a minimum, they should meet once a year during the first two years of implementation with the LAWA executives to discuss progress to date, "lessons learned," adjustments made, and overall successes and setbacks.

To ensure that the implementation effort results in recommendations that build on each other and toward a better future, LAWA executives need to monitor, track, and evaluate progress in implementing the IEA Survey recommendations on an ongoing basis. As necessary and each year, LAWA executives should make the necessary refinements to achieve the desired outcomes.

LAMP-AL00008

Los Angeles World Airports (LAWA): Industrial, Economic, & Administrative (IEA) Survey Implementation Monitoring Tracker - 2016

#/ Source	Area	Recommendation	Recommendation Description	Priority	Accountability: Implemen. Mgr.	Performance Objective	Planned Start	Actual Start	Planned Completion	Actual/Estimated Completion	Date Updated	Notes
I.2.1	Strategy and Accountability	Strategic Prioritization	LAWA would benefit from a strategic framework for defining priorities, which it should then measure and improve.	High	CEO							
I.2.2	Strategy and Accountability	Strategic Budgeting	LAWA should use a more strategic approach to developing its budget.	High	CFO							
I.2.3	Strategy and Accountability	Balanced Scorecards	LAWA should implement a Balanced Scorecard (BSC) approach as a performance management system.	High	CEO							
I.2.4	Strategy and Accountability	Organizational Structure	LAWA's organizational structure should be designed to reflect its strategic directions.	High	CEO							
I.3.1	Corporate Social Responsibility	Embrace CSR Principles	To improve public accountability, LAWA should embrace Corporate Social Responsibility (CSR) principles.	High	CEO							
I.3.2	Corporate Social Responsibility	Economic Impact - LA	LAWA can monitor and plan to increase its contributions to the Los Angeles economy.	High	New function							
I.3.3	Corporate Social Responsibility	Economic Development - Local	LAWA should continue to leverage land use planning and investments to maximize economic development around LAX.	High	CDO with Planning & Development							
I.3.4	Corporate Social Responsibility	Environmental Impact Reduction & Communication	LAWA should present the "big picture" of its environmental impact, while communicating its sustainability efforts.	High	CDO with Environmental Programs Group							
I.3.5	Corporate Social Responsibility	Community Relations	LAWA must always work on maintaining good external stakeholder relationships.	High	CEO with others assisting							
I.3.6	Corporate Social Responsibility	Gov't Affairs Effectiveness	LAWA should establish goals and measurements for evaluating the effectiveness of government affairs' activities.	Medium	Chief Executive Affairs Officer							
I.3.7	Corporate Social Responsibility	Internal Audit	LAWA may reduce losses and improve performance with a stronger Internal Audit function with BOAC oversight.	Medium	CEO, BOAC Chair							
I.4.1	Guest Experience	Guest Experience Measurements	LAWA should continue its guest experience efforts, tied to BSC performance measurements.	High	Guest Experience Program							
I.4.2	Guest Experience	Sense of LA & Amenities	LAWA needs to ramp up the sense of LA and its amenities for LAX to be world class.	High	Guest Experience Program							
I.4.3	Guest Experience	Hospitality & Informed Guests	LAX needs to focus on improving its reputation for hospitality and helping to make it easier for guests to navigate LAX.	High	Guest Experience Program							
I.4.4	Guest Experience	Safe & Secure	LAWA's highest priority is to ensure that the airports are safe and secure.	High	Chief of Security & Public Safety							
I.4.5	Guest Experience	CTA Congestion	LAWA needs to proactively manage CTA congestion during and after construction.	High	COO with DED/OMEMG & coordinatied with CDO							
I.4.6	Guest Experience	Operations Technology Investment	LAWA should increase its operations technology investments, given anticipated construction-related challenges.	High	COO							
I.4.7	Guest Experience	Maintenance - Preventive & Unscheduled	LAWA maintenance should continue its efforts to tackle preventive and unscheduled maintenance.	High	FMUG							

LAMP-AL00008

Los Angeles World Airports (LAWA): Industrial, Economic, & Administrative (IEA) Survey Implementation Monitoring Tracker - 2016

#/ Source	Area	Recommendation	Recommendation Description	Priority	Accountability: Implemen. Mgr.	Performance Objective	Planned Start	Actual Start	Planned Completion	Actual/Estimated Completion	Date Updated	Notes
I.4.8	Guest Experience	Partner Collaboration	LAWA will need to develop collaborative relationships with multiple jurisdictions to measure guest experiences in/out of LAX.	High	Guest Experience Program							
I.4.9	Guest Experience	Leverage Technology & Applications	LAWA will need to be nimble and move expeditiously to leverage technology and develop apps.	High	Guest Experience Program, IMTG Assist							
I.5.1	Capital Improvement Process	Capital Planning, Budgeting, & Technology	LAWA should enhance its SAP system to better support capital projects.	High	CFO, IMGT Assist							
I.5.2	Capital Improvement Process	Capital Improvement Plans	LAWA should establish at least 5-year and 10-year Capital Improvement Plans (CIP).	High	CDO with Planning & Development							
I.5.3	Capital Improvement Process	Capital Program Implementation	LAWA can improve capital program implementation through stronger management readiness and coordinated processes.	High	CDO with DED/ADG, LAMP, & CONRAC/ITF, Roads							
I.5.4	Capital Improvement Process	Augmentation Staff Management	Better management of the augmentation staff may lower capital program and project costs.	High	CDO with DED/ADG, LAMP, & CONRAC/ITF, Roads							
I.5.5	Capital Improvement Process	Capital Program Staff Alignment	LAWA will need a full complement of capable staff to implement its aggressive capital program.	High	COO with Admin./Human Resources							
I.5.6	Capital Improvement Process	Procurement RFP Process	Changes in procurement can reinforce LAWA's commitment to a fair and impartial RFP process.	High	COO with Admin./ Procurement							
I.5.7	Capital Improvement Process	Parking Audit	LAWA should conduct a fiscal and operational audit of parking operations.	High	Internal Audit							
I.6.1	PMD and ONT Airports	ONT Transition Planning	Effective planning will be key to a successful transition of ONT to another airport authority (OIAA).	High	CEO							
II.1.1	BSC Implementation	Develop BSCs	LAWA should develop BSCs and a performance measurement system (builds on Recommendation I.2.3)	High	CEO							
II.1.2	BSC Implementation	Financial Metrics	LAWA should designate Finance to manage financial metrics reported in all balanced scorecards (BSC).	Medium	CFO							
II.1.3	BSC Implementation	Refine & Implement BSCs	LAWA should review, refine, adopt, and monitor the Balanced Scorecards (BSC) developed during the IEA Survey.	High	CEO with Executive Team							

LAMP-AL00008

Los Angeles World Airports (LAWA): Industrial, Economic, & Administrative (IEA) Survey Implementation Monitoring Tracker - 2016

#/ Source	Area	Recommendation	Recommendation Description	Priority	Accountability: Implemen. Mgr.	Performance Objective	Planned Start	Actual Start	Planned Completion	Actual/Estimated Completion	Date Updated	Notes

Definitions of Column headings:

- ***#/Source*** – Chapter and section number from IEA Survey Report
- ***Area*** – Chapter name from IEA Survey Report
- ***Recommendation*** – Shortened label for recommendation
- ***Recommendation Description*** – Full recommendation description from IEA Survey Report
- ***Priority*** – High, Medium, or Low; based on discussions and Implementation Plan
- ***Accountability*** – Implementation Manager responsible for recommendation
- ***Performance Objective*** – Specific, measurable outcome for recommendation from the Implementation Plan
- ***Planned Start*** – Planned start date for first action from Implementation Plan
- ***Planned Completion*** – Planned completion date for final action from Implementation Plan

Directions:

To provide ongoing summary updates, the IEA Project Manager updates the following fields based on the quarterly reports provided by each Implementation Manager. These fields provide the ongoing status updates for each recommendation over time:

- ***Actual Start*** – Actual start date of first action, based on quarterly reports
- ***Actual/Estimated Completion*** – Adjusted estimate or actual completion of final action, based on quarterly reports
- ***Date Updated*** – Last date update was provided and entered into Implementation Tracking Summary
- ***Notes*** – More detailed and qualitative explanations of challenges, progress, updates, etc.

KH

APPENDIX A: IEA SURVEY APPROACH

JOINT ADMINISTRATORS

The IEA Survey is administered through a Joint Administration of the Offices of the Mayor, Controller, and Chief Legislative Analyst (CLA) (on behalf of the City Council). The Joint Administrators serve an important role for discussing LAWA's strengths, accomplishments, and opportunities for improvement and ensuring the KH team has identified and investigated the key issues; advising KH about sources within the City to obtain needed data or information; considering the pros and cons of different approaches for addressing identified opportunities for improvement; and furnishing insights regarding constraints, such as the City Charter, Personnel Code, Memoranda of Understanding (MOUs), or other City requirements.

For the 1999, 2008, and 2016 IEA Surveys, the Joint Administrators have invited a LAWA executive to attend these meetings to ensure LAWA was informed of the issues raised and, if needed, have an opportunity to offer more insights regarding the issues. The selected LAWA executive also included LAWA's Internal Auditor. Both had only advisory roles.

OBJECTIVES AND SCOPE

In conducting the 2008 and 1999 IEA Surveys, KH's goal was to expeditiously review LAWA performance and develop strategic recommendations to position LAWA for the future. This IEA Survey differs from these prior IEA Surveys in direction. In Phase I, the Joint Administrators asked the KH team to focus primarily on understanding LAA's performance metrics, considering how they could be applied to:

- Performance-Based Budgeting
- Competitiveness
- Economic Development
- Management of Capital Projects
- Transportation

In Phase II, KH focused on building a framework for a performance management system for improved public accountability. The KH team applied the Balanced Scorecard (BSC) model to performance measurements in four key areas – two strategic and two business oriented:

- **Strategic BSCs that affect external and internal stakeholders:** Corporate Social Responsibility (CSR) and Guest Experiences
- **Internal business operations, affecting all aspects of LAWA:** Administrative Support Areas (Procurement, Human Resources, and Internal Audit) and Finance, Accounting, and Risk Management

KH

KH also developed recommendations in areas that support better performance in these key areas, including capital planning and budgeting, transportation and access, and competitiveness. KH's focus was primarily on LAWA overall and LAX with some performance measurements developed for VNY.

KH also took into consideration Stated Practices, Actual Practices, Prevailing Practices, Good Practices, and Next Practices. Successful, competitive organizations are striving to anticipate "Next Practices" rather than settle for Prevailing or Best Practices.

TASKS PERFORMED

The KH team performed a broad array of fact-finding and analytical tasks:

Work Planning and Fact-Finding

- Developed Phase I and Phase II Work Plans, which KH reviewed with the Joint-Administrators and LAWA executives
- Reviewed documents
- Conducted more than 85 interviews, including primarily LAWA BOAC, executives, managers, and staff; Los Angeles City officials; union representatives (SEIU and airport police); and other stakeholders
- Documented strengths and accomplishments since the 2008 IEA Survey
- Built on the work of Robert Kaplan and David Norton to adapt Strategy Maps and Balanced Scorecard (BSC) concepts to LAWA

Strategy Maps and Balanced Scorecards Foundation

Performance Measurements

- Surveyed LAWA managers regarding the performance measurements they currently use; 47 out of 53 responded (89% response rate)
- Of the 215 measurements initially identified, compiled the information to indicate:
  - Group/division identifying specific measurements
  - Measurement name and description
  - Data for FY2010-2011 though FY2014-15
  - Target and target priority
  - Frequency Used, Frequency Desired, Difference
  - Use (e.g., financial operations, guest experience, our people, public accountability, community impact)

KH

  - Linkages to Strategic Plan, Capital Plan, etc.
  - Use by division, LAWA, BOAC, etc.
  - Availability of data (routinely available, requires effort to obtain, not available)
  - Changes in measurement since FY2010-2011
  - Data source
- Completed a gap analysis of missing performance indicators, resulting in an initial list of 600 potential measurements (16% of the potential measurements had reported data points)
- Conducted a series of performance management workshops at LAWA, including 3 with LAWA executives and 12 workshops with working groups focused on finance/accounting, human resources, administration, and guest experience
- Facilitated a series of meetings to identify the best measurements to use, given available data and priorities, and populated data fields where available
- Identified the approach for LAWA to collect data and establish a baseline in the future for the balance of the data fields
- Supported LAWA working groups in preparing their presentations on BSCs to LAWA executives
- Established targets and timing where feasible

Analysis and Reporting

- Identified findings, opportunities, and associated recommendations, focusing on areas that would help improve current performance levels in the studied areas
- Reviewed opportunities with LAWA executives to verify them for completeness and accuracy
- Prepared a Phase I report and a draft IEA Survey Report, which KH reviewed with the Joint Administrators and LAWA executives to ensure accuracy and completeness
- Prepared the final IEA Survey Report (this document)

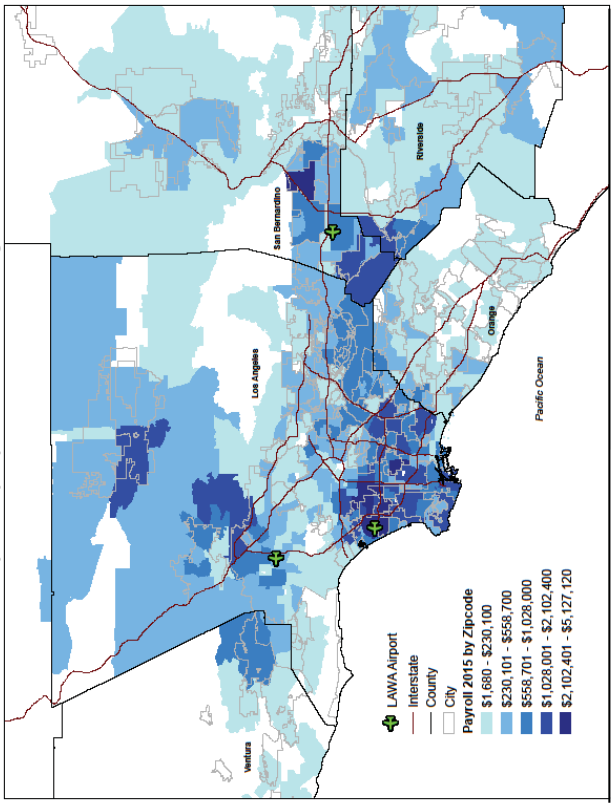
KH

APPENDIX B: GIS MAPS RELATED TO CORPORATE SOCIAL RESPONSIBILITY (CSR)

Chapter I.3 on CSR presented the GIS information for the County of Los Angeles. The following GIS maps focus on the data for the boundaries of the City of Los Angeles and the SCAG region.

Distribution of Labor Income

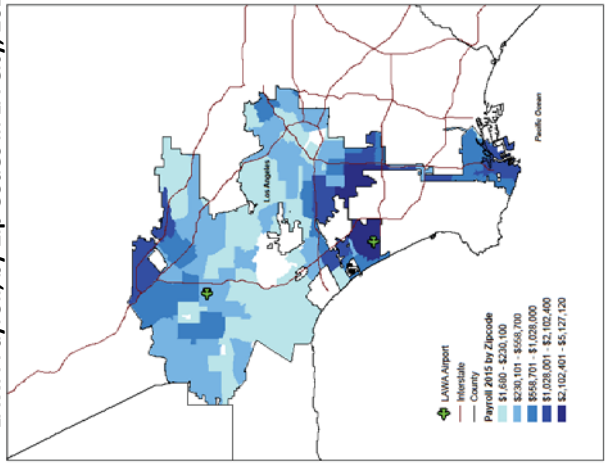
LAWA Payroll, by Zip Codes in SCAG Region, 2015



Source: GIS map compiled by KH Consulting Group (KH) team members, Metropolitan Research and Economics (MR+E), Civic Projects, Inc., GIS West Consulting, using LAWA payroll, by zip code, data, December 2015.

Distribution of Labor Income

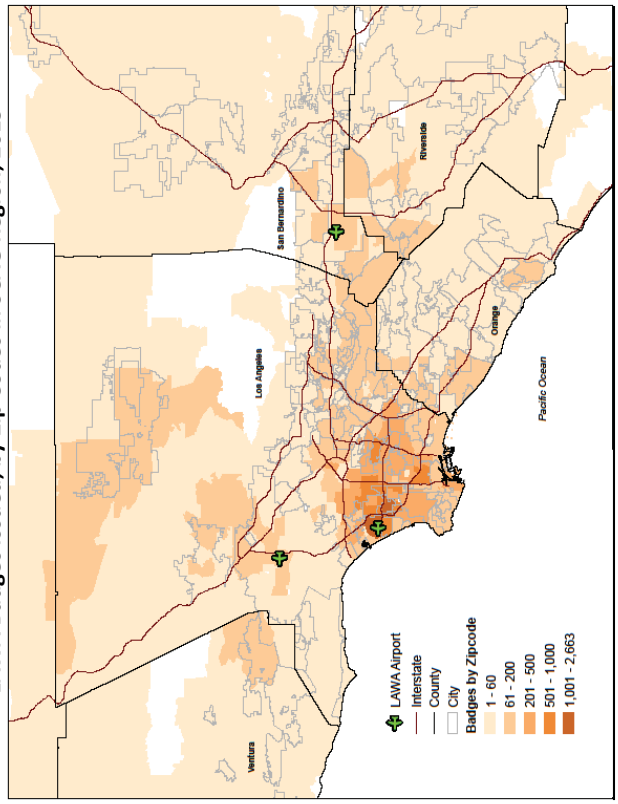
LAWA Payroll, by Zip Codes in LA City, 2015



Source: GIS map compiled by KH Consulting Group (KH) team members, Metropolitan Research and Economics (MR+E), Civic Projects, Inc., GIS West Consulting, using LAWA payroll, by zip code, data, December 2015.

Distribution of Airport Workers

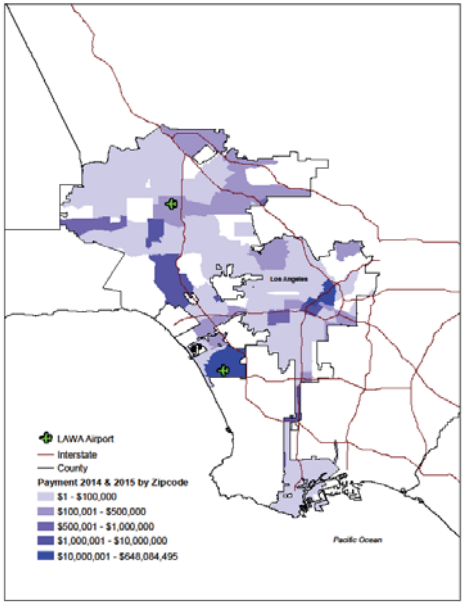
LAWA Badges Issued, by Zip Codes in SCAG Region, 2015



Source: GIS map compiled by KH Consulting Group (KH) team members, Metropolitan Research and Economics (MR+E), Civic Projects, Inc., GIS West Consulting, using LAWA payroll, by zip code, data, December 2015.

LAWA Purchases

LAWA Accounts Payable Paid, by Zip Codes in LA City, 2014 & 2015



Source: GIS map compiled by KH Consulting Group (KH) team members, Metropolitan Research and Economics (MR+E), Civic Projects, Inc., GIS West Consulting, using LAWA payroll, by zip code, data, December 2015.

KH

APPENDIX C: ACRONYMS & TERMINOLOGY

This Appendix defines acronyms, followed by airport codes, used in the IEA Survey report.

ACRONYMS

Acronym	Description or Definition
9/11	September 11, 2001 terrorist attacks
A380	Airbus 380
AA/EEO	Affirmative Action/Equal Employment Opportunity
ACH	Automated Clearing House
ACI	Airport Council International
ADA	Americans with Disabilities Act
AFE	Authority of Expenditures
AIP Grants	Airport Improvement Program Grant fund established by the Airport and Airways Improvement Act (AAIA) of 1982. Airport Improvement Program (AIP) grants are funded by Federal aviation user taxes. Grant monies can be either discretionary or entitlement grants depending on the use and restrictions.
Airside	The airfield, gates, jet ways, and other facilities associated with the movement of aircraft. "Airside" often refers to all facilities beyond the passenger security screen although the distinction differs from airport to airport.
ALPA	Air Line Pilots Association, International
ALUC	Airport Land Use Commission
APM	Automated People Mover, a new light rail system LAWA plans to build
apron	The paved area leading from the terminals to the taxiways and runways. For purposes of our report, the terms "ramp" and "apron" are used interchangeably.
AQMP	Air Quality Management Plan
ARB	State of California Air Resource Board
ARFF	Airport Rescue and Firefighting
ATA	Air Transport Association
ATC	Airport Transit Connector
AVI	Automatic Vehicle Identification
aviation revenue	Revenues generated from landing fees and related aircraft, cargo, or passenger fees.
AVR	Average Vehicle Ridership
BAGS	Baggage Airline Guest Services
BOAC	Board of Airport Commissioners. LAWA operates under the management and control of a five-member (seven under the new City Charter) Board of Airport Commissioners, who are appointed by the Mayor and approved by the City Council.
BOAC Commissioners	Those individuals who serve on the Board of Airport Commissioners.
BOAC President	President of the Board of Airport Commissioners
BSC	Balanced Scorecard
CAC	Citizen Advisory Council

KH

Acronym	Description or Definition
CALM	Construction & Logistics Management team at LAX
Caltrans	State of California, Department of Transportation
CAO	Los Angeles City Administrative Officer. The CAO is the chief financial advisor to the Mayor and the City Council and reports directly to both.
CBA	Community Benefits Agreement
CBP	United States Customs Service – Customs Border Patrol
CCT	Closed-Circuit Television
CDG	Commercial Development Group at LAWA
CEQA	California Environmental Quality Act
CFO	Chief Financial Officer
CFR	Code of Federal Regulations
CFR	Crash-Fire-Rescue operations at ONT
CIO	Chief Information Officer
CIP	Capital Improvement Plan
City (the)	City of Los Angeles
City Attorney	The City Attorney is attorney and legal advisor to the City of Los Angeles, a municipal corporation, and the City Council, all officers, boards, and departments. The City Attorney provides LAWA with Legal Services that are housed at and paid for by LAWA.
City Controller	The City's chief accounting and auditing officer.
City Council	City Council of Los Angeles
City Personnel Department	Centralized human resources services for the City of Los Angeles. LAWA is subject to all Personnel Department policies and programs, including Civil Service rules.
City Treasurer	The custodian of all funds of the City and affiliated entities, including LAWA.
CLA	Los Angeles Chief Legislative Analyst. The Office of the CLA provides staff support to the City Council and its various committees.
CNEL	Community Noise Equivalent Level
CNG	Compressed Natural Gas
commercial air carriers	Private companies licensed by the U.S. Government to operate aircraft between cities to carry passengers and freight for profit.
Compensatory Landing Fees	Rate-making methodology based on recovery of costs allocable to the particular facilities occupied or used.
connecting traffic	The number of airport enplanements or percentage thereof, who pass through the airport to a separate destination, and thus use the airport as a transfer point to change planes. See also: hub airport.
CONRAC	Consolidated Rent-a-Car Center, a new facility that LAWA plans to build
COO	Chief Operating Officer
CTA	Central Terminal Area at LAX
CUP	Central Utility Plant at LAX
CUTE	Common Use Terminal Equipment
CY	Calendar Year
dB	decibels

KH

Acronym	Description or Definition
DBB	Design-Bid-Build
DBFOM	Design-Build-Finance-Operate-Maintain
debt per enplaned passenger	Net funded debt divided by total enplaned passengers. A measure of leverage and relative indebtedness.
Discretionary AIP Grants	AIP grant monies available on a project-specific basis. Generally carry fewer restrictions than entitlement grants.
discretionary funds	Leftover revenues to be used by the airport authority at their discretion. Discretionary funds can be considered the authority's "profit."
DOA	City of Los Angeles Department of Airports, a proprietary department of the City (also known as Los Angeles World Airports (LAWA))
DOC	Department Operations Center, LAWA's emergency operations center
dominant carrier	The air carrier handling the highest percentage of total enplanements at a particular airport.
dotted-line reporting	The secondary (higher-level) supervisor to whom an
EDS	Explosive Detection Systems
EEO/AA	Equal Employment Opportunity/Affirmative Action
EIR	Environmental Impact Report
EIS	Environmental Impact Statement
enplanements	A measure of airport utilization based upon the total number of revenue passengers boarding an aircraft at a given airport.
enterprise agency	A governmental agency, which is predominantly fee supported. Examples include airports, harbors, water utilities, etc.
EOC	Emergency Operations Center
EPA	U.S. Environmental Protection Agency. This Federal agency is charged to protect human health and safeguard the natural environment – air, water, and land.
EPAX	Enplaned Passengers
FAA	The Federal Aviation Administration, an agency of the U.S. Department of Transportation. The FAA was created by the Federal Aviation Act of 1958 and its mandates include aviation safety, navigational aids, and air traffic control. Through its sizable grant programs and regulatory authority, the FAA exercises considerable influence over the planning and development of individual airports.
FAMIS	Finance, Accounting, and Management Information System, LAWA's term for the SAP application installed in 2001
FAR	Federal Aviation Regulation
FBO	Fixed Base Operation. A ground-based operation, such as a hangar, fueling facility, catering kitchen, etc.
FEIR	Final Environmental Impact Report
FTE	Full-Time Equivalent
GA	general aviation
GARB	General Airport Revenue Bond, the most common form of airport authority indebtedness.
GDP	Gross Domestic Product

KH

Acronym	Description or Definition
GENPS	Goods, Equipment, and Non-Professional Services
GHG	Greenhouse Gas
GIS	Geographic Information System
GPI	Genuine Progress Indicators
GTC	Ground Transportation Center
guest	A passenger or an individual who is meeting or dropping off a passenger at LAX (also referred to as "meeters and greeters")
Harbor Department	The port operations in the City of Los Angeles
HAZMAT	Hazardous materials
HR	human resources
hub airport	A hub airport predominantly handles connecting passengers rather than Origination and Destination (O&D) traffic. LAX is not a domestic hub airport, although it serves as a critical connection for trans-Pacific flights.
IATA	International Air Transport Association
ICAO	International Civil Aviation Organization
IEA Survey	Industrial, Economic, and Administrative Survey, a performance review mandated by City Charter (this study)
IP	Internet Protocol
IT	Information technology
ITC	Intermodal Transportation Center
itinerant carrier	A seasonally operated airline or an infrequent user of an airport.
Joint-Administrators	The IEA Survey is joint-administered by representatives from the Offices of the Mayor, Chief Legislative Analyst (CLA), and City Controller.
KH	KH Consulting Group, a Los Angeles-based management consulting firm; the primary contractor for this IEA Survey
KH Team	Includes all the KH and subcontractor consultants who worked on the IEA Survey.
KPI	Key Performance Indicator. KPIs are the critical measurements of success: financial performance, process improvement, or customer satisfaction.
LA	Los Angeles
LA Metro	Los Angeles County Metropolitan Transit Authority. This Authority is the primary provider of transit-related services for the Southern California region.
LA/ONT	The marketing name LAWA uses for Ontario International Airport (ONT).
LA/PMD	The marketing name LAWA uses for Palmdale Regional Airport (PMD).
LA/VNY	The marketing name LAWA uses for Van Nuys Airport (VNY).
LABVN	Los Angeles Business Virtual Network
LADOT	Los Angeles City, Department of Transportation
LADWP	Department of Water and Power in the City of Los Angeles
LAFD	Los Angeles Fire Department. LAFD provides crash, fire, and rescue (CFR) services to LAWA at LAX and VNY.
LAMP	Landside Access Modernization Program

KH

Acronym	Description or Definition
landed ton	A landed ton is one thousand pounds of aircraft landing at an airport. Landing fees are generally calculated based on landed tons as determined by the certified landing weight of each type of aircraft.
landside	That portion of airport facilities devoted to the main terminal complex, ground transportation, and movement of passengers and baggage away from aircraft areas. Although the distinction differs from airport to airport, landside is often considered as all the terminal facilities up to the passenger security screen.
LAPD	Los Angeles Police Department
LAUSD	Los Angeles Unified School District
LAWA	Los Angeles World Airports (also known as the City of Los Angeles Department of Airports (DOA), a proprietary department of the City). DOA owns and manages four airports: Los Angeles International (LAX), Ontario International (ONT), Van Nuys Airport (VNY), and Palmdale Airport (PMD).
LAWA – ADG	LAWA's Airports Development Group
LAWA - COO	Chief Operating Officer
LAWA - CPPEG	LAWA's Capital Programming, Planning & Engineering Group
LAWA - CUP	Central Utility Plant
LAWA – ELUP	Environmental & Land Use Planning
LAWA – FMUG	Facilities Maintenance & Utilities Group
LAWA – IMTG	LAWA's Information Management & Technology Group
LAX	Los Angeles International Airport (IATA airport code)
LAX Modernization Program	The first comprehensive modernization plan for LAX in more than 20 years; it included such projects as the Midfield Satellite Concourse, adapted gates at TBIT for wide-body A380 aircraft, and related projects, such as taxiways, tunnels, aircraft ramp areas, utility improvements, etc.
LAXAAC	Los Angeles International Airport Area Advisory Committee – a citizen advisory group for LAX
LEA	Law Enforcement Agency
LEA Assist	Law Enforcement Agency assistance, i.e., could include almost any action, such backing up a City police unit on a vehicle stop, transporting a prisoner and escort to an aircraft for extradition, etc.
LEED	Leadership in Energy and Environmental Design
LOA	Leave of Absence
load factors	Percentage of passenger seats filled
LOI	Letter of Intent
LRT	Light Rail Transit
LSBE	Local Small Business Enterprise
LUMP	Land-Use Mitigation Program
MAP	Million Annual Passengers (enplaning + deplaning)
Maximo	Maintenance software used at LAWA
MBE	Minority Business Enterprise
meeters and greeters	Individuals who meet or drop off passengers at LAX

KH

Acronym	Description or Definition
MMRP	Mitigation Monitoring and Reporting Program
MOA	Memorandum of Agreement
Moody's	A bond rating agency
MoS	Memorandum of Support
MOU	Memorandum of Understanding
MPC	Mobile Passport Control app
NA	Not applicable
NCP	Noise Compatibility Program
NEPA	National Environmental Policy Act
NIGP	National Institute of Government Purchasing
NLAMP	New Los Angeles Marketing Partnership
non-aviation revenue	Revenue generated from concessions, parking, terminal services, etc.
NOP	Notice of Preparation
O&D	Origination and Destination (O&D) traffic consists of an airport's passengers, which begin or end a journey at that airport (as opposed to connecting passengers). LAX is predominantly an O&D airport.
OCIP	Owner-Controlled Insurance Program
Office of the Mayor	As the executive officer of the City, the Mayor exercises supervision over all City affairs. In addition to appointing the Airport Commissioners, the Mayor has additional responsibilities for overseeing LAWA.
ONT	Ontario International Airport (IATA airport code); also referred to as LA/ONT in LAWA marketing materials
operating agreement	An agreement between an airport and an airline which establishes rates and fees, and the rights and duties of each party. Airlines which sign operating agreements are referred to as "signatory airlines" or "signatories."
PARCS	Parking Access Revenue Control System
PAX	Passenger
PC	Personal Computer
Personnel Department	The Personnel Department provides resources services in accordance with the Civil Service system for the City of Los Angeles
PFC	Passenger Facility Charges (PFCs) are a per passenger assessment levied by individual airports. PFCs are a relatively recent financing innovation approved by the FAA on an airport by airport basis.
Planning Department	The City Planning Department guides the City's land use development and infrastructure financing decisions by a series of planning documents, which address population distribution, traffic circulation, public facilities, location of housing, commercial and industrial facilities, protection of the natural environment, and the health, welfare, and safety of the general public.
PMD	Palmdale Regional Airport (IATA airport code); also referred to as LA/PMD in LAWA marketing materials.
Port of Los Angeles	Harbor Department in the City of Los Angeles
PTS	Procurement Tracking System

KH

Acronym	Description or Definition
RAIC	Regional Airport Improvement Corporation. A consortium of airlines which finance airport infrastructure through issuance of special facility lease revenue bonds. Six of the eight terminals at LAX are financed by RAICs.
ramp	The area where aircraft are serviced immediately adjacent to the terminal. For purposes of our report, the terms "ramp" and "apron" are used interchangeably.
RAMS	Revenue Asset Management System
refunding	A procedure whereby a bond issuer refinances an outstanding bond issued by issuing new bonds.
Residual landing fees	Rates based on recovery of net cost of a cost center or an airport as a whole, after allowing credit for concession and other non-airline revenues.
RFB	Request for Bid
RFI	Request for Information
RFP	Request for Proposal
RFQ	Request for Qualification
ROI	Return on Investment
ROW	Right of Way
RTIP	Regional Transportation Improvement Plan
RTP	Regional Transportation Plan
RTPA	Regional Transportation Planning Agency
S&P	Standard and Poor's, a bond rating agency
SAIP	South Airfield Improvement Project
SANBAG	San Bernardino Associated Governments
SAP	Financial software used at LAWA. SAP is the corporate name for what was formerly Systems Applications and Products. SAP provides LAWA's accounting, financial reporting, materials management, and human resources software.
SBE	Small Business Enterprise
SCAG	Southern California Association of Governments. This organization is a regional planning agency and a Council of Governments comprised of 184 cities in six counties, which promote growth, personal well-being, and livable communities for all Southern Californians.
SCAQMD	South Coast Air Quality Management District. This district is responsible for air pollution control for the four-county region, including Los Angeles and Orange counties and parts of Riverside and San Bernardino counties.
SEIR	Supplemental Environmental Impact Report
signatory airline	An airline which has signed an operating agreement at a particular airport. Most large carriers are "signatories."
SLBE	Small Local Business Enterprise
solid-line reporting relationship	Primary supervisor for day-to-day management
SPARTA	Service Providers and Artisan Tradesman Activities
SPAS	Specific Plan Amendment Study
SPIMS	Sustainability Performance Improvement Management System

KH

Acronym	Description or Definition
T-#	Terminal number (as in Terminal 5 = T-5)
TBIT	Tom Bradley International Terminal
TSA	Transportation Security Administration
UPS	United Parcel Services
USCS	United States Customs Service
USDOT	United States Department of Transportation. The Aviation Consumer Protection Division of the U.S. Department of Transportation processes consumer concerns and complaints pertaining to air carriers.
USGBC	United States Green Building Council
UTAHS	Underground Tanks and Hazardous Substances
VC, HO	Payroll Codes: (Vacation, Holiday)
VMT	Vehicle Miles Driven
VNY	Van Nuys Airport (IATA airport code); also referred to as LA/VNY in LAWA marketing materials.
WBE	Woman Business Enterprise

IATA AIRPORT CODES

IATA Airport Code	Airport
AMS	Amsterdam Airport
ATL	Atlanta Hartsfield-Jackson Airport
BOS	Boston Logan International Airport
BUR	Burbank-Glendale-Pasadena Airport (Bob Hope)
BWI	Baltimore/Washington International Thurgood Marshall Airport
CDG	Paris Charles de Gaulle Airport
DCA	Ronald Reagan Washington International Airport
DEN	Denver International Airport
DFW	Dallas/Fort Worth Airport
DTW	Detroit Airport
EWR	Newark Airport
FRA	Frankfurt Airport
HKG	Hong Kong International Airport
HND	Tokyo Haneda International Airport
IAD	Dulles International Airport
IAH	Houston George Bush Intercontinental Airport
JFK	New York John F. Kennedy International
LAX	Los Angeles International Airport
LGA	La Guardia Airport – New York City, NY
LGB	Long Beach Airport
LHR	London Heathrow Airport
MIA	Miami International Airport
MSP	Minneapolis Saint Paul International Airport

KH

IATA Airport Code	Airport
OAK	Oakland International Airport
ONT	Ontario International Airport
ORD	Chicago O'Hare Airport
PHX	Sky Harbor International Airport – Phoenix, AZ
PIT	Pittsburgh International Airport
PMD	Palmdale Regional Airport
SEA	Seattle/Tacoma International Airport
SFO	San Francisco International Airport
SIN	Changi Airport – Singapore
VNY	Van Nuys Airport

KH

APPENDIX D: ADDITIONAL METRICS

Appendix D contains additional metrics that LAWA might consider in two specific areas – Environmental Responsibility and Guest Experience – as it develops a more complete performance measurement system.

ENVIRONMENTAL RESPONSIBILITY

Table D.1 displays the breadth of measurements considered in developing the Environmental Responsibility BSC in Chapter II.2.

Table D.2: Potential Measurements – Environmental Responsibility

Measurement Label & Description – Environmental Responsibility
Green Buying
$ consumable products purchased that meet IFMA environmental standards or equivalent
% consumable building supplies purchased that meet IFMA environmental standards or equivalent
# suppliers engaged in Extended Producer Responsibility (EPR) and resource recovery
# non-recyclable products
% non-recyclable products
# "Sustainable Lease Agreements" based on Model of Port
# environmental compliance audits completed
Water Conservation
water reused
% water reused
# (amount) potable water used.
# imported water
% imported water
# locally sourced water
# water recycled
% water recycled
% water locally sourced
# storm water capture
% storm water capture
# sewer spills
% on-schedule shutdowns of water utility
# unscheduled water shutdowns of water utility
% landscape acreage with drought resistant plants, artificial turf, and rock in landscape
# average hours to respond to failed automated valves and faucets
% overall reduction in water usage compared to base year, using California water reduction standards

KH

Measurement Label & Description – Environmental Responsibility
repairs and replacements of outmoded plumbing
gallons of water loss in the cooling tower operation through more efficient means of rejecting heat
gallons of water used per PAX in terminals
gallons of water used in irrigation systems
gallons water used LAWA
gallons of water used LAX
% of target - gallons of water used
% compliance with California IGP on storm water pollution prevention
# gallons runoff water exceeding pollution standards
% compliance with California IGP on storm water pollution prevention
# gallons total Potable Water consumed LAX
# gallons total Potable Water consumed VNY
# gallons total Potable Water consumed ONT
$ Potable Water LAX
$ Potable Water VNY
$ Potable Water ONT
# gallons Reclaimed water consumed LAX
# gallons Reclaimed water consumed VNY
# gallons Reclaimed water consumed ONT
# acres Drought tolerant area LAX
# Total landscape area, acres LAX
# Landscaped area using reclaimed water LAX
# acres drought tolerant area VNY
# acres total landscape area VNY
# acres drought tolerant area ONT
# acres total landscape area ONT
% Converted to computer internet based controlled irrigation LAX
# acreage Converted to computer internet based controlled irrigation LAX
$ for each irrigation module LAX
# gallons recycled Fleet maintenance car wash LAX
# gallons recycled for Fleet car wash VNY
# gallons recycled for Fleet car wash VNY
# gallons recycled Tenant Rental Car wash
$ savings using reclaimed water
Noise
sound insulation completed El Segundo

KH

Measurement Label & Description – Environmental Responsibility

KH

Measurement Label & Description – Environmental Responsibility
Awards
LA Green Business Certification awards non-LAWA
LA Green Business Certification awards LAWA
Reports & Clearances
Mitigation Monitoring Reporting Program Reports (MMRP) completed each year for prior year
sustainability reports completed within 1 year
% compliance with CA 23 CCR 16, involving Underground Storage Tank (UST) management
# CEQA and NEPA environmental clearances per project
% compliance with CA 23 CCR 16, involving Underground Storage Tank (UST) management
# CEQA and NEPA environmental clearances per project
# Level 3 Airport Carbon Accreditation Achieved

GUEST EXPERIENCE

Table D.2 displays the breadth of measurements considered in developing the Guest Experience BSC in Chapter II.3. Because LAWA lacks access to data that affect the guest experience, but are maintained and monitored by its partners, such as the airlines, TSA, etc., KH has color-coded those metrics:

- Private companies (airlines, private shuttle services, private parking lots, concessionaires, etc.) in peach
- Other governmental agencies (TSA, CBP, FAA, CBP) in yellow

Table D.2: Potential Measurements – Guest Experience

Measurement Label	Measurement Description – Guest Experience
CORE SERVICES	
Access: Time/Efficiency	
Vehicular	
ADA Vans - PAX	# disabled PAX served by ADA vans
ADA Vans - Response Time	# mins between ADA van request and PAX pickup
ASR - Roadway	# roadway area shutdown requests (ASR) approved by CALM (CY)
ASR - Terminal	# terminal area shutdown requests (ASR) approved by CALM (CY)
CTA - # Vehicles/Day	# vehicles entering the CTA each day
CTA - Curb Availability	# feet of inner and outer curb available (minus construction) - lower
CTA - Curb Availability	# feet of inner and outer curb available (minus construction) - upper
CTA - LL Drive Time	# mins to complete CTA orbit - Lower
CTA - UL Drive Time	# mins to complete CTA orbit - Upper
CTA Congestion	# CTA congestions where CTA orbit takes 30 mins or more
Drive Time - Century	# mins to drive Century Blvd

Carbon Pollution from Transportation

On this page:

- Transportation and climate change
- EPA programs to reduce carbon pollution

Transportation and Climate Change

Burning fossil fuels like gasoline and diesel releases carbon dioxide, a greenhouse gas, into the atmosphere. The buildup of carbon dioxide (CO_2) and other greenhouse gases like methane (CH_4), nitrous oxide (N_2O), and hydrofluorocarbons (HFCs) is causing the Earth's atmosphere to warm, resulting in changes to the climate we are already starting to see today.

Twenty-six percent of U.S. greenhouse gas (GHG) emissions is from transportation. Transportation is the second leading source of GHG emissions in the United States, just behind electricity. Between 1990 and 2014, GHG emissions in the transportation sector increased more in absolute terms than any other sector.

EPA Programs to Reduce Carbon Pollution from Transportation

EPA is addressing climate change by taking the following actions to reduce GHG emissions from the transportation sector. Many of these programs have benefits beyond cutting carbon. For example, decreasing fuel consumption can reduce our dependence on foreign oil and save consumers money at the pump.

Setting GHG Emissions Standards for Cars and Trucks

EPA and DOT issued a joint rule-making that set GHG emissions and fuel economy standards for the largest sources of greenhouse gases from transportation, including cars, light trucks, and heavy-duty trucks.

Light-duty GHG regulations for passenger vehicles and trucks are projected to:

- Cut 6 billion metric tons of GHG emissions over the lifetimes of the vehicles sold in model years 2012-2025 and allowing manufacturers flexibility in meeting the standards;

- Nearly double the fuel efficiency while protecting consumer choice; and
- Reduce America's dependence on oil and provide significant savings for consumers at the pump.

Heavy-duty GHG regulations are projected to:

- Reduce CO_2 emissions by about 270 million metric tons over the life of vehicles built under the program, saving about 530 million barrels of oil; and
- The proposed "Phase 2" program includes standards that would further reduce GHG emissions and improve the fuel efficiency of medium and heavy-duty trucks.

- Analyses and reports for setting GHG emissions standards for cars and trucks

Increasing the Use of Renewable Fuels

Congress created the Renewable Fuel Standard program in an effort to reduce greenhouse gas emissions and expand the nation's renewable fuels sector while reducing reliance on imported oil. Renewable fuels are produced from plants, crops and other biomass, and can reduce greenhouse gas emissions when compared to burning the fossil fuels they replace.

Learn more:

- Renewable Fuel Standard Program

Taking First Steps to Set a Greenhouse Gas Standards for Aircraft

EPA along with the Federal Aviation Agency at the United Nations' International Civil Aviation Organization have developed international carbon dioxide emissions standards for aircraft. EPA is also now working through the process of potentially setting domestic regulations under the Clean Air Act that address GHG emissions from certain classes of engines used in aircraft.

Learn more:

- Regulations for GHG emissions from aircraft

Greening the Federal Fleet

The 2007 Energy Independence and Security Act requires federal agencies to only acquire cars, light trucks, or medium-duty passenger vehicles that are low greenhouse gas emitting. Each year, EPA evaluates the greenhouse gas emissions performance of the fleet to determine which vehicles in each class emit less harmful greenhouse gases. The law requires federal agencies to purchase these high performing vehicles. Over time this will result in a greener federal fleet.

- Federal fleets

Reducing Greenhouse Gas Emissions Associated with Moving Goods

SmartWay helps the freight transportation sector improve supply chain efficiency, reducing greenhouse gases and saving fuel costs for companies who participate. Through SmartWay, EPA and its partners are making significant gains in the efficiency of how our nation moves goods, helping address air quality challenges, improving public health and reducing freight's contribution to climate change.

Informing Consumers Information on Fuel Economy and Advanced Technology Cars

LAMP-AL00008

Since the mid-1970s EPA has required automakers to display a label on new cars and light trucks with information on vehicles' fuel economy and fuel costs. Labels on today's cars also include ratings on greenhouse gas and smog-forming pollutants. EPA provides online resources, such as the Green Vehicle Guide and the joint EPA-DOE website fueleconomy.gov, to help consumers identify vehicles that can save them money at the pump and reduce their transportation-related emissions.

EPA's SmartWay light duty program goes further and identifies the top performing vehicles in terms of fuel economy and emissions to assist consumers in making an environmentally friendly purchase.

The Road Ahead

LAMP-AL00008

While transportation continues to contribute a large percentage of U.S. emissions, there are many opportunities for the sector to deliver greenhouse gas reductions. Low-carbon fuels, new and improved vehicle technologies, strategies to reduce the number of vehicle miles traveled, and operating vehicles more efficiently are all approaches to reducing greenhouse gases from transportation.

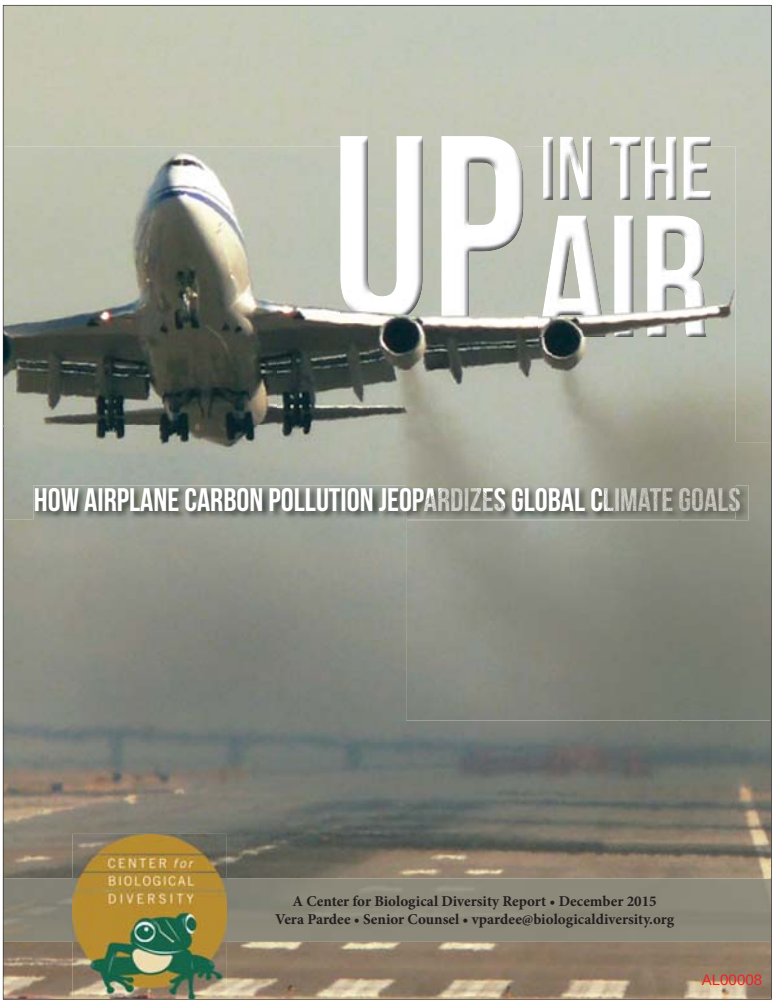
Center for Biological Diversity, "Up In the Air—How Airplane Carbon Pollution Jeopardizes Global Climate Goals," December 2015

LAMP-AL00008



A Center for Biological Diversity Report • December 2015
Vera Pardee • Senior Counsel • vpardee@biologicaldiversity.org

EXECUTIVE SUMMARY

If commercial aviation were considered a country, it would rank seventh after Germany in terms of carbon emissions. Yet as the world prepares for the Paris climate conference, it is uncertain whether or how negotiators will produce an international treaty that reduces airplanes' planet-warming pollution.

For this report, we analyzed projected global airline travel in the coming years to determine the cost to the climate crisis under a business-as-usual scenario.

We found that by 2050, aircraft emissions are projected to more than triple. Unchecked, between 2016 and 2050 global aviation will generate an estimated 43 gigatonnes of carbon dioxide emissions. That amounts to more than 4 percent of the world's entire remaining carbon budget – the amount of pollution that can still be emitted before catastrophic planetary warming becomes virtually certain.

The international response to airplane pollution has been weak. The overall goal of the Conference of the Parties (COP) to the United Nations Framework Convention on Climate Change (UNFCCC) in Paris is to reduce all greenhouse emissions sufficiently to keep temperature increases below 1.5/2 degrees Celsius. But language folding aviation emissions into this goal was recently deleted from the Paris negotiating text and replaced by vague language that makes no mention of a temperature cap. These developments suggest that some parties would like to see this highly polluting industry exempted from the Conference's critical climate goal.

The International Civil Aviation Organization (ICAO), the U.N. agency responsible for addressing international aircraft pollution, so far has failed to tackle aviation carbon emissions. Over the last 18 years, ICAO has rejected, in turn, efficiency standards, fuel taxes, emissions charges and global emissions trading. The carbon emission standards now under consideration at ICAO barely bend the industry's steeply rising emission trend.

Despite the projected tripling of aviation emissions and the lack of any regulations, the aviation industry proclaims that it can attain its professed goal of carbon-neutral growth by 2020 by means of carbon offsets. But offsets are difficult to verify and monitor and should not displace readily available, cost-effective technical measures that can prevent and avoid – rather than merely offset – carbon pollution from new and existing airplanes.

Airplane pollution could be reduced dramatically. A recent International Council on Clean Transportation (ICCT) report evaluating the top 20 transatlantic air carriers found a 51 percent gap in fuel efficiency separating the top performers from the least-efficient airlines. The report highlights not only that technical improvements are an obvious and cost-effective first step before turning to offsets, but also that technological and operational advancements and fuel efficiency are inextricably linked.

Therefore, aviation emissions standards must be built on technology-forcing provisions that will drive fuel-efficiency gains. But ICAO's currently proposed standard is built on technology between 8 to 12 years *behind* the technology curve. Moreover, it would likely apply only to airplane types newly designed after 2023, and thus would cover just 5 percent of the global aircraft fleet in 2030 – barely bending the industry's ever-rising emissions curve.

The U.S. Environmental Protection Agency need not follow ICAO's ineffectual standards proposal. Instead, as the U.S. EPA points out, ICAO's standards must be consistent with U.S. law and appropriate for U.S. domestic needs. The U.S. Clean Air Act is designed to advance technology-forcing standards and protect public health and welfare. If ICAO fails to adopt an adequate aviation standard that also complies with U.S. law, the U.S. EPA will need to set more stringent domestic standards.

The U.S. is by far the largest contributor to aircraft carbon pollution and thus bears a special responsibility to combat the problem. Combined greenhouse gas emissions from U.S. aircraft are 7 times higher than aircraft greenhouse gas emissions from China, which itself ranks second in the world for aircraft emissions. Should the U.S. EPA set U.S. domestic aviation carbon standards, they will likely serve as a catalyst for international action.

Reducing airplane emissions is critical to the overall goal of the Paris climate summit. Unless the international community confronts this rapidly growing source of pollution, the world will find it nearly impossible to combat the climate crisis.

KEY FINDINGS

1. If global aircraft CO_2 emissions were compared to emissions of individual countries, they would rank *seventh* just behind Germany, outranking Belgium, the Czech Republic, Ireland, Sweden and some 150 other countries.[1]

2. Global aviation's contribution to manmade climate change is forecast to *triple* by 2050.[2]

3. According to the Intergovernmental Panel on Climate Change (IPCC), total cumulative future anthropogenic emissions of CO_2 must remain below 2,900 gigatonnes.[3] Of that amount, 1,890 gigatonnes of CO_2 was already emitted by 2011, leaving 1,010 gigatonnes of CO_2 left to emit.[4]

4. The International Energy Agency (IEA) projects that the world's estimated remaining carbon budget, consistent with a 50 percent chance of keeping temperature rises below 2° C, will be consumed by 2040 without aggressive international carbon emission cuts.[5]

5. Even if all emissions reductions pledged by countries this year are implemented, the Earth will still suffer 2.7°-3.5°[7] Celsius of warming by century's end.

6. On its current trajectory, global aviation will generate an estimated 43 gigatonnes of CO_2 emissions under business as usual scenarios between 2016 and 2050 and consume more than 4 percent of the world's entire remaining carbon budget.[8]

7. For the last 18 years, the International Civil Aviation Organization (ICAO) has failed to implement any greenhouse gas regulations or other control measure.[9] Emissions standards currently under discussion would barely bend the climbing emissions curve.[10]

8. The United States is by far the largest aviation carbon polluter. The U.S. EPA estimates that emissions from U.S. aircraft "are *about 7 times higher* than aircraft greenhouse gas emissions from China," which itself is ranked *second* in the world for its aircraft emissions.[11]

9. U.S. aviation alone is estimated to release 9 gigatonnes of CO_2 from 2016 through 2050 under business as usual scenarios.[12]

10. The U.S. EPA has proposed to determine that U.S. aviation greenhouse gas emissions endanger human health and welfare.[13] Once the "endangerment finding" becomes final, U.S. law mandates that standards be set.[14] The standards now under discussion at ICAO do not meet U.S. legal requirements.

11. The Obama administration's *Cost of Delaying Action to Stem Climate Change* report conservatively values the cost of *delay alone* as at least $150 billion for *every year* of delayed action that leads to overshooting the temperature increase by just 1 degree Celsius over pre-industrial levels, and sharply higher annual costs for every degree of warming thereafter.[15]

AIRCRAFT EMISSIONS: UP, UP AND STEEPLY CLIMBING

A. Global aviation's contribution to climate change is forecast to triple by 2050

Global greenhouse gas emissions from aircraft are a surprisingly large and steeply growing contributor to the climate crisis. If global aircraft emissions were compared to those of individual countries, they would rank *seventh*, just behind Germany, and ahead of Belgium, the Czech Republic, Ireland, Sweden and some 150 other countries.[16]

Moreover, aircraft are one of the fastest-growing emission sources. Under business-as-usual scenarios, global aviation emissions are scheduled to *triple* by 2050.[17] ICAO confirms the trend, projecting 4.9 percent annual growth in air-passenger traffic[18] and 5.2 percent annual growth in air-freight traffic from 2010,[19] more than doubling global air traffic by 2030.[20]

If global emissions triple by 2050 as forecast, that year aviation alone could emit over 3 gigatonnes of carbon under a high-growth, business-as-usual scenario.[21] By comparison, Germany, the sixth largest emission source by country, currently emits 0.84 gigatonnes per year.[22] Cumulatively, from 2016 to 2050, some estimates put global aviation emissions as high as 43 gigatonnes.[23] Yet carbon from aviation remains unregulated.

As of the date of this paper, some 146 countries, including the European Union submitting as a bloc, have pledged emissions reductions in anticipation of the Paris negotiations, and many industries are responding to the global climate-change challenge.[24] For example, the U.S. light-duty vehicle sector is projected to reduce its emissions by approximately 30 percent from a 2010 baseline by 2035,[25] and the U.S. Clean Power Plan is projected to decrease emissions from U.S. power plants by 32 percent over 2005 by 2030.[26] In Europe, emissions have fallen 23 percent between 1990 and 2014,[27] and the European Union has pledged emission reductions of 40 percent by 2030 over a 1990 baseline.[28]

The sum of these efforts and pledges remains insufficient, as discussed below; aviation, however, has so far contributed nothing at all. That failure undermines global climate efforts and is neither fair nor justifiable.

"The airline industry just isn't taking carbon pollution seriously."
-Vera Pardee, senior attorney at the Center for Biological Diversity

B. The U.S. aviation industry is by far the largest carbon polluter in the sky

In 2014, the U.S. aviation industry alone emitted about 0.2 gigatonnes of greenhouse gases.[29] Aircraft are the third-largest source of greenhouse gas emissions in the U.S. transportation sector, accounting for some 11 percent of the sector and some 4 percent of U.S. emissions overall.[30] This carbon pollution makes U.S. aviation by far the largest contributor to the industry's global problem. According to U.S. EPA, emissions from U.S. aircraft "are *about 7 times higher* than aircraft greenhouse gas emissions from China," which itself is ranked *second* in the world for its aircraft emissions.[31] As another comparison, in 2014, CO_2 emissions from the entire U.S. electricity generation sector attributed to burning coal released 1.6 gigatonnes of CO_2.[32] That same amount (1.6 gigatonnes) has been released from U.S. airplanes since 2007, when the Center for Biological Diversity and others first petitioned the U.S. EPA to begin regulating aviation emissions.[33]

Cumulatively, U.S. aviation emissions from 2016 through 2050 will be 9 gigatonnes, assuming emissions grow as forecasted by the Federal Aviation Administration.[34]

C. Unchecked, aviation is set to consume some 4 percent of the world's remaining carbon budget.

Six years ago, at the 2009 Conference of the Parties, both industrialized and developing countries made pledges to keep global temperature increases below 2° C.[35] Even if every new emissions reduction pledged by countries this year is implemented, however, the Earth will still suffer 2.7[36]-3.5° C[37] of warming by century's end.

Figure 1 Climate Interactive, *Climate Score Board*, https://www.climateinteractive.org/tools/scoreboard/.

The 2° C target itself, however, is dangerously high. The UNFCCC released a report stating that surpassing even 1.5° C of warming will lead to "unacceptable" impacts.[38]

According to the Intergovernmental Panel on Climate Change (IPCC), total cumulative future anthropogenic emissions of CO_2 must remain below 2,900 gigatonnes.[39] Of that amount, 1,890 gigatonnes of CO_2 was already emitted by 2011, leaving 1,010 gigatonnes of CO_2 left to emit.[40] The International Energy Agency (IEA) projects that the world's estimated remaining carbon budget will be consumed by 2040 without aggressive international carbon emission cuts.[41] On its current trajectory global aviation will consume 43 gigatonnes of the world's remaining carbon budget by 2050.[42] The global climate budget, however, has no room to spare for that amount of carbon pollution.

While the light-duty vehicle sector will reduce its emissions by approximately 30 percent by 2035, global aviation emissions are scheduled to triple by 2050.

D. Cost of Delay

The IPCC and the United Nations Environment Program (UNEP) agree that immediate action is by far more cost-effective than deferred action.[43] UNEP warned that "after 2020, the world will have to rely on more difficult, costlier and riskier means of meeting the [emissions reduction] target."[44]

These conclusions are supported by the Obama administration's *Cost of Delaying Action to Stem Climate Change* ("Cost of Delay Report").[45] The report conservatively values the cost of *delay alone* at 0.9 percent of global output for *every year* of delayed action that leads to overshooting the temperature increase by just one degree Celsius over pre-industrial levels, and the next degree increase would incur additional costs of 1.2 percent.[46] Put into perspective, 0.9 percent of the United States' gross domestic product translates to approximately $150 billion.[47]

As it stands, nations are struggling to make it to 1.5/2° C. Reining in unchecked aviation pollution is a critical task as the world runs out of time for meaningful action.

What is the International Civil Aviation Organization?

ICAO is a specialized agency within the United Nations responsible for establishing international standards for aircraft.

In 1998, the Kyoto Protocol to the United Nations Framework Convention on Climate Change directed developed "Annex I" countries to work through ICAO to reduce emissions of greenhouse gases from international aviation.

In the 18 years since ICAO was assigned that responsibility, the organization has not adopted any measure to tackle greenhouse gas emissions.

A ROLE FOR REGULATORS

In light of the crucial need not just to decrease the upward slope of aviation greenhouse gas emissions but also to reduce that pollution quickly and dramatically, regulators must promptly set stringent regulatory standards. The standards now under consideration at ICAO, however, do next to nothing to curb aviation's carbon pollution. If ICAO does not set sufficiently stringent standards, the U.S. EPA must step in to do so.

A. International Civil Aviation Organization's History of Poor Regulation

Eighteen years — that is how long ICAO has failed to regulate aviation carbon pollution.[48] During that time, ICAO has failed to adopt a single measure to curb aircraft-induced global warming.[49]

ICAO's technical group, the Committee on Aviation Environmental Protection (CAEP), did not begin to work on a CO_2 efficiency standard until 2010, projecting the delivery of a completed standard by 2016.[50] CAEP's work progressed in two phases: first, the development of a certification requirement or

"metric" by which fuel efficiency would be measured; and second, setting the stringency level at which certification would be set.

Examination of both the metric and the stringency proposals reveals that the eventual standard will do little, if anything, to affect the ever-increasing aviation emissions and will in fact allow significant emissions *increases* from the sector.

1. ICAO's Inaccurate CO_2 Metric

In 2013, ICAO finalized a CO_2 certification requirement, or metric, to serve as the basis for a global CO_2 standard for new aircraft.[51] That metric, however, fails to accurately account for aviation CO_2 emissions.

First, as ICCT identified, by failing to take into account the fuel used in "landing and takeoff, taxi, climb and descent"[52] and instead considering only cruise fuel burn, the metric does not accurately capture typical flight operations or their emissions.[53] It omits approximately 8 to 10 percent of fuel used for medium- to long-haul flights and 20 to 25 percent of fuel consumed during short-haul flights.[54] According to ICCT, this omission also means that any regulatory standard will not require the use of cost-effective and available fuel-efficiency technologies aimed at increasing efficiency during those operations, "such as electric taxi or more efficient auxiliary power units that reduce fuel burn on those flight segments."[55]

ICAO's approach fails to account for approximately 8 to 10 percent of aircraft fuel used during medium- to long-haul flights and 20 to 25 percent used during short-haul flights.

Second, because ICAO gives no credit to lightweight materials, the metric does not incentivize the adoption of crucial design mechanisms or technologies such as lightweight composites that reduce aircraft weight and increase fuel efficiency.[56]

Finally, ICAO's approach selects test points for identifying fuel efficiency that ICCT says "are not representative of typical operations,"[57] and "improvements measured on the metric may not necessarily translate to real emissions reductions in-service."[58] In sum, ICAO's metric fails to capture airlines' true fuel burn and is unacceptable.

2. ICAO's Insufficient Proposed CO_2 Stringency Levels

ICAO's proposed CO_2 stringency levels suffer from the following flaws:

(1) *Limited Applicability:* ICAO is considering three potential stringency levels, but appears likely to adopt the least stringent among them. This stringency level would apply only to those future aircraft types that are *newly designed* after the standard's proposed implementation date of 2023.[59] This limitation, if adopted, would mean that only a tiny fraction (as low as 5 percent) of the fleet would be covered by any standard *by 2030.*[60]

(2) *Pass/Fail Basis:* the proposed standard would be applied on a pass/fail basis to individual aircraft only; as such, it would do nothing to achieve fleet-wide reductions despite dramatic industry growth.[61]

(3) *2016 Technology Levels:* ICAO's stringency standard is proposed to be based on technology in effect in 2016, 4 to 7 years *behind* technology in existence on the proposed implementation date of 2023,[62] and some 8 to 12 years *behind* the date that newly designed aircraft covered by the standard are expected to enter into service.[63]

Judged by what is known about purchase orders for aircraft to be delivered over the next 8 to 10 years, the ICAO standard will do next to nothing to reduce emissions below business-as-usual scenarios.

i. Limited Applicability

To determine which aircraft would have to comply with its regulations, ICAO identified three possible options in order of increasingly broad coverage.

- *Weakest*: The weakest option involves applying the standards solely to completely new aircraft type designs.

  Under this option, covered aircraft are defined by U.S. EPA as aircraft that "have never been manufactured prior to the effective date of a standard."[64] According to an ICCT researcher, Anastasia Kharina, considering the 25- to 30-year operational lifetimes of aircraft, most airplane types "already announced" will essentially be "grandfathered into the standard in perpetuity."[65] By 2030, the standard would cover only 5 percent of the global fleet.[66] As the International Coalition for Sustainable Aviation (ICSA) points out, the standard may "in fact increase emissions" by incentivizing delay in the release of new designs to avoid regulation.[67]

- *Intermediate:* The intermediate option also involves limiting applicability to new aircraft types only, but would also include new "in-production aircraft that have a significant change in CO_2 emissions" according to U.S. EPA.[68]

  This option would cover newly produced aircraft undergoing either (a) "changes in type design that may adversely affect . . . CO_2 emissions" – that is, physical changes causing CO_2 emissions increases by a yet to be determined amount[69] – or (b) "extensive" changes to "design, configuration, power or mass" that would trigger "new investigation of compliance with the applicable airworthiness regulations."[70] Yet, as U.S. EPA has pointed out, "adverse" changes of this nature are rare due to "substantial market forces to alleviate any adverse effects on aircraft fuel burn or CO_2 emissions."[71]

- *Most Expansive*: The most expansive applicability option under consideration at ICAO involves standards that apply to both new aircraft types and new in-production aircraft.

> Whereas newly designed aircraft types and adverse changes to in-production designs are and will remain rare, as U.S. EPA has pointed out, "incremental improvements [of in-production aircraft] will likely be frequent and occur in the near term."[72]

Notably, regardless of which of these three alternatives ICAO may adopt, *none requires any efficiency improvements for existing aircraft* already in service, regardless of the cost-effectiveness and availability of technology that could boost the efficiency of the existing fleet.

The standard would be set at technology levels *8 to 12 years behind* the technologies available when covered new aircraft types enter service.

ii. Pass/Fail Basis

Applying a standard only as a pass/fail requirement for individual aircraft types means that industry need only focus on making improvements to its least-efficient planes, rather than develop the kind of fleet-wide technology improvements incentivized by the corporate average standards already in wide use for vehicles.[73]

iii. 2016 Technology Levels

The stringency levels would be based on technologies *in common use as of 2016*[74] for aircraft entering into service in the 2024 to 2028 timeframe. Thus, any standard would be set at technology levels *8 to 12 years behind* the technologies available when covered "new aircraft types" enter service.

As U.S. EPA recognizes, this "would likely result in no additional CO_2 reductions beyond what would have occurred absent a CO_2 standard, either for the near- and mid-term, about 5 to 10 years from 2016, or even in the longer term of 20 years plus."[75]

The limited scope of applicability, distant implementation dates, and outdated technology requirements mean that ICAO's CO_2 proposed standards are wholly inadequate.

B. The Role of U.S. EPA

Spurred by litigation by the Center for Biological Diversity and allies, the U.S. EPA finally moved to begin setting U.S. domestic aircraft carbon pollution standards in July of 2015 with two concurrent actions:[76]

- *Proposed Finding That Greenhouse Gas Emissions From Aircraft Cause or Contribute to Air Pollution That May Reasonably Be Anticipated To Endanger Public Health and Welfare ("Endangerment Finding")*, and
- *Advance Notice of Proposed Rulemaking ("ANPR").*

Clean Air Act, Sec. 231(a)(2)(A):

"The Administrator shall, from time to time, issue proposed emission standards applicable to the emission of any air pollutant from any class or classes of aircraft engines which in his judgment causes, or contributes to, air pollution which may reasonably be anticipated to endanger public health or welfare."

The Endangerment Finding proposes to find that greenhouse gas emissions from aircraft endanger public health and welfare under section 231(a) of the U.S. Clean Air Act.[77] When the Endangerment Finding is finalized next year, U.S. law *compels* the agency to set domestic aircraft CO_2 emission standards.[78]

The ANPR discusses and seeks input related to setting those standards. Specifically, the U.S. EPA has stated that its adoption of any ICAO standard is "contingent on" whether any such "international aircraft CO_2 standard . . . is consistent with [U.S. law] and is appropriate for domestic needs in the United States."[79] U.S. EPA's adoption of a future ICAO standard is by no means automatic: if ICAO's standard does not pass muster under U.S. law, EPA must set more stringent standards.

CASE STUDY: Mobile Sources

The U.S. EPA has previously determined that greenhouse gas emissions endanger the public health and welfare and has taken action to regulate light, medium, and heavy duty vehicles.

In the summer of 2015, the U.S. EPA and the National Highway Traffic Safety Administration proposed fuel efficiency and greenhouse gas standards for medium- and heavy-duty vehicles. While the proposal is less ambitious than it could be, the proposed standards would cut emissions by 1 billion metric tons and provide net social benefits of over $200 billion.

Benefits come from total fuel savings and from significant climate benefits, improvements in public health, and increased U.S. energy security.

C. Why Adopting ICAO's Standard Will Not Satisfy Clean Air Act Requirements

In 2011, CAEP, ICAO's technical group, proclaimed the purpose of an international CO_2 emissions standard to be the achievement of "reductions from the aviation sector beyond expected 'business as usual.'"[80] Under this unambitious goal, saving a single gallon of fuel beyond an undefined and uncontrolled maximum would suffice.

By contrast, the U.S. EPA has an obligation under the Clean Air Act to protect public health and welfare by *reducing* or even *preventing pollution* altogether.[81] An ICAO standard that contemplates no more than *de minimis* reductions in emissions relative to a steeply rising business-as-usual scenario is incompatible with the U.S. EPA's mandate.

Moreover, the U.S. Clean Air Act is intended and designed to be technology-forcing and to stimulate innovation. In a prior rulemaking, the U.S. EPA correctly noted that U.S. law does not require it to "demonstrate that a technology [selected for inclusion in a standard] is currently available universally or over a broad range of aircraft."[82]

In other words, technology still on the drawing board may be selected as part of the emission standard. Basing an emission standard on technology 10 to 12 years behind existing technology standards at the time of implementation, as ICAO contemplates, is directly contrary to the technology-forcing nature of the U.S. Clean Air Act.

If, as appears likely, ICAO's final standard does not meet U.S. legal requirements, the U.S. EPA will be required to set a more stringent U.S. domestic standard. Such a standard, in turn, would likely serve as a catalyst leading to international adoption.

D. Why Focusing On Market-Based Mechanisms Is The Wrong Approach

The airline industry avows a voluntary emissions goal of carbon-neutral growth after 2020 to be achieved through "market-based measures" consisting of emissions-offset purchases. The efficacy of offsets in reducing carbon emissions, however, is questionable. It is difficult, for example, to ascertain whether actions intended to preserve carbon sinks have in fact done so, or whether those sinks would have remained intact in any event; and numerous other problems are inherent in identifying, monitoring and verifying offsets.

Offsets make sense only after stringent energy efficiency standards have been applied first so that emissions are *avoided and prevented* in the first place – rather than "offset" by uncertain methods.

E. Aviation efficiency can be improved significantly

That the airline industry can make enormous fuel-efficiency improvements is unquestionable. For example, according to a recent ICCT report, some airline carriers, British Airways among them, are up to *51 percent less fuel efficient* than their competitors, such as Norwegian Air.[83]

Implementing standards that raise the performance of the least fuel-efficient carriers to what is presently achieved by their competitors makes common sense, as it prevents rather than merely offsets carbon pollution. Offsets may have a role once efficiency has been maximized through cost-effective technological and operational measures, but they should not take their place.

Smarter investment in technology and changes in operations could transform a carrier like British Airways to one like Norwegian. Yet the history of airline investments shows that absent mandatory standards, airlines will significantly underinvest in currently available efficiency improvements. A prior ICCT study of air carrier fuel efficiency noted that improved fuel efficiency could have brought about savings of $2.26 billion or more for the airlines in 2010 alone.[84]

Airlines can sustain the cost of improved technology requirements and would likely benefit significantly from the associated reduction in fuel expenses. Last year, American, Delta, Southwest, and United Continental earned $2.88 billion,[85] $659 million,[86] $1.13 billion,[87] and $1.14 billion[88] in net income, respectively.

Investing earnings in efficiency improvements for new and existing planes and operations generally pays for itself in the form of lowered fuel expenses, sometimes many times over. For example, one viable aircraft technology under development by Boeing as part of the U.S. Federal Aviation Administration's Continuous Lower Energy, Emissions, and Noise (CLEEN) program could save 340 million gallons of fuel a year — an estimated $1.2 billion in savings for the industry if used fleet-wide in the U.S.[89]

F. U.S. EPA is not required to follow ICAO's standards

The U.S. EPA acknowledges its authority to implement regulations that are more stringent than ICAO's international standards. In the EPA's first rulemaking under Clean Air Act section 231 (curtailing NO_x emissions from aircraft), the agency noted its "discretion to adopt more stringent NO_x standards . . . if the international consensus standards ultimately prove[d] insufficient to protect U.S. air quality."[90] Similarly, in the greenhouse gas ANPR, the EPA stated that it would adopt the "international aircraft CO_2 standard [if] consistent with CAA section 231 and . . . appropriate for domestic needs in the United States."[91]

If whatever final standards ICAO adopts will not affect, much less reduce, U.S. domestic emissions for decades, the U.S. EPA must step forward. The U.S.' exceptional and vastly disproportionate position as by far the greatest emitter of global aircraft greenhouse gases underscores its unique responsibility to reduce those emissions through enforceable domestic regulations. Once it does so, meaningful international standards will follow.

NEXT STEPS

Climate science, as well as the United States' international climate commitments, dictate that greenhouse gases, including those from aircraft, must be *reduced*; merely bending the upward curve slightly or even holding it level is insufficient. Every year of unnecessary delay in reducing greenhouse gas emissions from aircraft in the face of steeply rising, persistent and irreversible costs and harms from climate change, including the acknowledged possibility that mitigation will be too late altogether,[92] is unreasonable and unjustifiable.

The ICCT report, which found a 51 percent gap between the best and the worst performing transatlantic flight carriers, has demonstrated that airlines are capable of achieving much greater fuel-efficiency today.[93] Standards can be developed to greatly improve new aircraft based on currently existing technology as well as technology on the drawing board. Before the aviation industry looks to offsets that are difficult to trace, verify, and monitor, ICAO must mandate stringent emission standards for all aircraft. Failing that, the U.S. EPA should establish standards as mandated under U.S. law. The United States acknowledges that it must be a "world leader" in the "global movement to produce and consume energy in a better, more sustainable way."[94]

CONCLUSION

UNFCCC cannot continue to ignore airplane pollution in the international negotiations and must include aviation in the Paris agreement, obligating aviation to contribute its fair share to meeting the target of holding temperatures below 2º C. Oversight by the Conference of the Parties will help ensure that ICAO follows through on its responsibility to reduce aviation's emissions. Barring that, the U.S. EPA will have to do so.

Combined greenhouse gas emissions from U.S. aircraft are *about 7 times higher* than aircraft greenhouse gas emissions from China, which itself is ranked *second* in the world for aircraft emissions.

Exhibit Z

San Diego Association of Governments 2015 RTP/SCS EIR (excerpt)

Table 4.8-11
SB 375 GHG Reduction Targets and GHG Emissions under the Proposed Plan, 2035

	lbs CO_2 per person per day, 2035
Per Capita Emissions under the proposed Plan	20.3~~19.8~~
Percent Reductions under the proposed Plan	-21%~~-24~~%
ARB Target	-13%

Source: Appendix G-3 to the EIR
Note: Average weekday per capita CO2 reductions for passenger cars and light-duty trucks from 2005 level of 26.0 pounds per person per day.
The revised emissions and percentages in this table have been decreased by 2% per ARB requirement that EMFAC2014 model results be revised with 2% percent adjustment factor.

2035 Conclusion

Implementation of the proposed Plan would not conflict with SB 375 emission reduction targets for 2035. Therefore, this impact (GHG-3) in the year 2035 is less than significant.

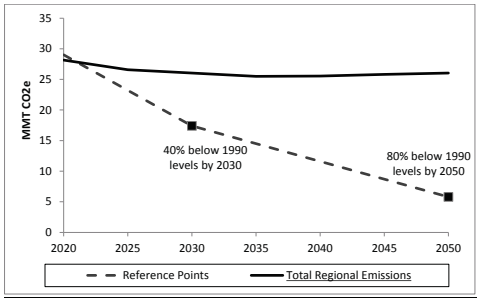
GHG-4 BE INCONSISTENT WITH THE STATE'S ABILITY TO ACHIEVE THE EXECUTIVE ORDER B-30-15 AND S-3-05 GOALS OF REDUCING CALIFORNIA'S GHG EMISSIONS TO 40 PERCENT BELOW 1990 LEVELS BY 2030 AND 80 PERCENT BELOW 1990 LEVELS BY 2050

ANALYSIS METHODOLOGY

The analysis evaluates whether the proposed Plan is inconsistent with the State's ability to achieve the Executive Order S-3-05 goal of reducing California's GHG emissions to 80 percent below 1990 levels by 2050. The analysis also evaluates whether the proposed Plan is inconsistent with the State's ability to achieve the Executive Order B-30-15 goal of reducing California's GHG emissions to 40 percent below 1990 levels by 2030.

The Executive Order S-3-05 goal of reducing California's GHG emissions to 1990 levels by 2020 was adopted in AB 32, and is evaluated in Impact GHG-2. Therefore, this analysis focuses on whether the region would achieve the 2050 goal. 2035 is also addressed in Impact GHG-4 as an interim year using the Executive Order B-30-15 goal of reducing California's GHG emissions to 40 percent below 1990 levels by 2030.

To perform this analysis, SANDAG identified estimated 2035 and 2050 emissions reduction reference points for the region. Note that there is no requirement that the SANDAG region's emissions be reduced by the same percentage ("equal share") as the statewide percentage in order for the State to achieve the Executive Order's goal. The proposed Plan's impacts nevertheless are considered significant if total emissions in the San Diego region exceed the estimated 2035 or 2050 GHG reduction reference points. A graph comparing regional emissions projected in the proposed Plan versus the Executive Order-based reference points is provided as Figure 4.8-1.



Source: Appendix G-1 to the EIR.
Note: the solid black line has been relabeled from "proposed Plan emissions" to "total regional emissions" and reflects the revised GHG emissions based on the minor modifications to the project description and the new version of EMFAC2014 (v1.0.7) released by ARB in May 2015. On-road GHG emissions in the Draft EIR were calculated using EMFAC2014 (v1.0.1).

Figure 4.8-1. Regional GHG Reductions Required to Meet Executive Order Reference Points for 2035 and 2050 vs. ~~Proposed Plan~~Total Regional Emissions

SANDAG identified the 2050 reference point by applying an 80 percent reduction to the San Diego region's 1990 emissions level. The 40 percent reduction was applied to the region's 1990 emissions level to identify a 2030 reference point, which was then used to develop a 2035 reference point by using a straight line trajectory from the 2030 goal to the 2050 goal.

As described in Impact GHG-2, the San Diego region's 1990 GHG emissions totaled 29 MMT CO_2e (see Appendix G-1 to the EIR). By applying the methodology described above, the 2035 reference point was identified as 14.5 MMT CO_2e, and the 2050 reference point was identified as 5.8 MMT CO_2e.

For the purpose of evaluating impacts under Impact GHG-4, because the Executive Order goals include both regional growth and land use change and the transportation network, the analysis has not been separated into the two categories. The impact assessment includes both regional growth and land use change and the transportation network. Emission calculations are provided in Appendix G-1.

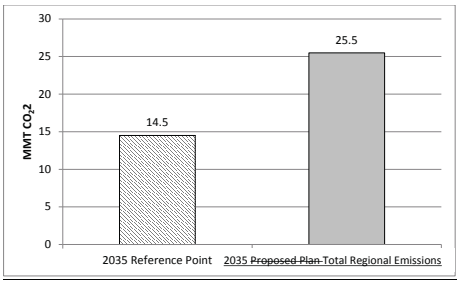
During the timeframe of the proposed Plan, climate change effects that are likely to exacerbate the proposed Plan's greenhouse gas emissions impacts include but are not limited to increases in temperatures and frequency, duration, and intensity of heatwaves (which could lead to increases in GHG emissions from local fossil fuel-fired power plants to meet electricity demands); and wildfires (which release GHG emissions of criteria pollutants. In general, these climate change effects would increase between 2020 and 2050. Climate change effects are discussed in more detail in Appendix F.

2035

Regional Growth and Land Use Change and Transportation Network Improvements and Programs

As discussed under Impact GHG-1, under implementation of the proposed Plan, total GHG emissions for the San Diego region in 2035 are projected to be approximately 25.5 MMT CO_2e, or 28 percent lower than GHG emissions in 2012 (Table 4.8-7). To be in line with its "equal share" of the state emissions reduction goals set forth in Executive Orders S-3-05 and B-30-15, regional GHG emissions would need to decrease to 14.5 MMT CO_2e by 2035.

Figure 4.8-1 shows a projection of "equal share" reductions for the San Diego region, compared to estimated proposed Plan emissions. In addition, Figure 4.8-2 compares the Executive Order-based 2035 reference point for the region with projected GHG emission under the proposed Plan. This is a significant impact.



Source: Appendix G-1 to the EIR

Figure 4.8-2. 2035 GHG Emissions Reference Point vs. ~~Proposed Plan~~Total Regional Emissions

2035 Conclusion

Because the total emissions in the San Diego region of 25.5 MMT CO_2e in 2035 would exceed the regional 2035 GHG reduction reference point of 14.5 MMT CO_2e (which is based on EO-B-30-15 and EO-S-3-05), the proposed Plan's 2035 GHG emissions would be inconsistent with state's ability to achieve the Executive Orders' GHG reduction goals. Therefore, this impact (GHG-4) in the year 2035 is significant.

We Must Prioritize Smarter Transit Options To And From Airports

Posted: 06/27/2016 3:36 pm EDT | Updated: 06/27/2016 3:59 pm EDT

ADVERTISEMENT

AdChoices

I spend a lot of time talking about airports and air travel, so it was a pleasure to attend a recent event at the Toronto Region Board of Trade where the discussion centered on aviation and transit. The need to have simple transit options to, from and around any airport is a growing area of importance all around the world. One solution for many airports has been to develop "multi-modal" transportation hubs: a network that uses everything from regional trains and buses, to local streetcars and light rail to move people and goods beyond the airport boundaries into employment areas and local communities.

Leading cities like New York, London, Paris, Frankfurt, Amsterdam, Hong Kong and Shanghai have all focused on improving "people moving" for some time now, realizing that their airports have become the centre of their region's connectivity. In a world where business is increasingly conducted between mega-regions, getting to and from the airport quickly is an economic advantage. In addition, as engines of economic activity, hub airports are often the anchor employer in a zone that depends on good ground transportation connections for travellers and employees alike.

Let's look at some of the key benefits of multi-modal airport hubs:

- **Global airport hubs mean job creation**

Once upon a time, cities were built around ports, then rail stations. Today, airports are the gateway to the world, which explains why so many corporate head offices, as well as other types of businesses, often locate close to the airport. Here in Toronto, the employment zone around Toronto Pearson is second only to the downtown core in terms of jobs in Canada, with 300,000 people working in its vicinity. Many of these workers are employed at the airport directly or at businesses in the surrounding area.
Across the globe, Zhengzhou, China -- home to one of the country's newest airports -- is a special economic zone that has become a massive industrial, commercial and logistics hub built specifically with air transport at its core. This zone now is five times the size of Manhattan and generates nearly US$6 billion in imports and exports each year. In the Netherlands, the Amsterdam Airport Schiphol area is home to more than 1,000 businesses, while the area around Dallas-Fort Worth International Airport holds the headquarters of nine Fortune 1,000 companies.

- **Growing airports need modern transit**

The growing employment zones around airports translate into movement of more people and goods. Given that air traffic is expected to double in North America over the next 30 years, we're faced with a massive prosperity dilemma: airports need help getting people out of cars and onto transit. Today, Vancouver Airport is the national leader for increased transit use to and from the airport. With the introduction of the Canada Line, passengers have a simpler way of accessing the airport and its surrounding region. However, more than 70 per cent of

people still arrive at Vancouver's airport by car. In Toronto, we have even more work to do -- approximately 92 per cent of travellers and workers arrive in cars every day.
At Paris' Charles De Gaulle airport, passengers have the luxury of many different transit options, which has resulted in only 40 per cent of travellers arriving by car. Back in Toronto, the road network around the airport is home to more car trips than anywhere else in the country, and represents the highest value roads in Ontario with more than $750 million in goods moving through them each day.

- **Well-connected systems improve our quality of life**

Airports are the future of the modern city region. They are small cities that create employment for thousands of people, from air traffic controllers and baggage handlers, to pilots and taxi drivers. Without connectivity, getting to and from flights becomes an issue, but getting to and from work can be an even bigger challenge. It stands to reason that a well-connected airport serves its passengers and its region well.
So, how do we get more people out of their cars and into transit to allow for the road networks around airports to become less congested? It's simple: our transit agencies and city planners need to factor in multi-modal connections to airports.

"Over 190 Countries Adopt Plan to Offset Air Travel Emissions," *The New York Times*

(October 6, 2016)

The New York Times http://nyti.ms/2dBuzJ8

SCIENCE

Over 190 Countries Adopt Plan to Offset Air Travel Emissions

By HENRY FOUNTAIN OCT. 6, 2016

Governments from more than 190 countries on Thursday adopted a measure that for the first time will reduce the climate impact of international jet travel.

The accord adds an exclamation point to a week in which enough countries signed onto the broader Paris climate deal to ensure that it will enter into force later this year.

The aviation plan, the product of years of negotiations, was approved by acclamation at a meeting of the International Civil Aviation Organization, or I.C.A.O., in Montreal.

The measure could force air carriers to take major steps to improve fuel economy in their routes and fleets, very likely accelerating the purchase of newer, more efficient planes.

Carriers may pass the cost of the program on to consumers in higher airfares, though most experts think any increases would be relatively small.

Leaders hailed the accord, which will take effect in 2021, as a major step in reducing the environmental impact of international aviation, which is currently responsible for about 2 percent of worldwide emissions of greenhouse gases.

Secretary of State John Kerry called the measure "unprecedented" and said it built on the Paris agreement and other international efforts to reduce emissions.

"This measure addresses a growing source of global emissions, demonstrates the international community's strong and growing support for climate action in all areas and helps avoid a patchwork of potentially costly and overlapping regional and national measures," Mr. Kerry said in a statement.

Along with international shipping, international aviation was not covered by the Paris accord reached in December. On Tuesday, with the ratification of that pact by the European Union, it reached a threshold — acceptance by countries responsible for more than 55 percent of the world's emissions — that causes it to go into effect. It is expected to enter into force before the next large United Nations climate meeting, in Morocco early next month.

The aviation measure will be voluntary for the first six years, and even countries that commit to it voluntarily will be allowed to opt out on relatively short notice.

Under the program, airlines will buy credits to offset emissions from individual flights. The credits will come from alternative energy installations, forest conservation programs and other projects that prevent some amount of greenhouse gas emissions.

But critics point to several possible problems.

Some environmental groups said the plan did not go far enough, forecasting that it would fall short of the goal originally set by the aviation organization to offset all of the growth in emissions from air travel after 2020.

At least 65 nations, including the United States, China and the European Union countries, have signaled that they will participate during the voluntary phase of the measure.

The measure exempts many smaller countries that do not have large international air carriers, and because of rules on competition, that could mean that some popular routes from participating countries could be exempt as well.

Several countries that are significant sources of international air travel, including Russia and India, on Thursday expressed formal reservations about the agreement, indicating they would not participate, at least for now.

Critics and supporters of the measure alike noted that much work remains to be done before the agreement is put into effect. Mechanisms must be developed to monitor and report current emissions, and criteria established to select conservation programs and other projects that will count toward offset credits.

The aviation industry has supported the idea of mitigating the climate impact of its jet engines. Manufacturers have taken steps to improve the efficiency of current engines, and some carriers have begun replacing some of their conventional jet fuel with cleaner-burning biofuels.

Some airlines have also encouraged environmentally conscious passengers to buy offsets voluntarily for their flights. Under the new measure, the airlines would buy the offsets, and they could pass the cost on to all passengers. But one estimate by the aviation organization forecasts that by 2025 the annual cost to airlines would be less than 1 percent of revenue.

On Thursday, industry representatives welcomed adoption of the measure.

Michael Gill, executive director of the Air Transport Action Group, a coalition of manufacturers, carriers and other companies, said he was heartened by how many countries, including small developing countries with a lot at stake as climate change takes hold, had agreed to participate voluntarily.

"Despite some reservations over the scheme being voluntary in its initial years, the support of all these states — large, small, developed and developing — shows the commitment of the international community, working through I.C.A.O., to deliver a robust measure," Mr. Gill said in a statement.

But an analysis by the International Council on Clean Transportation, a research group, shows that the agreement as approved will offset only about three-quarters of the growth in emissions from international aviation above 2020 levels. That means the proposal falls short of the goal originally set by the International Civil Aviation Organization of "carbon-neutral" growth after 2020.

Governor's Office of Planning and Research, Technical Advisory, "CEQA and Climate Change: Addressing Climate Change through California Environmental Quality Act (CEQA) Review," 2008.

Technical Advisory

CEQA AND CLIMATE CHANGE: Addressing Climate Change Through California Environmental Quality Act (CEQA) Review

This technical advisory is one in a series of advisories provided by the Governor's Office of Planning and Research (OPR) as a service to professional planners, land use officials and CEQA practitioners. OPR issues technical guidance from time to time on issues that broadly affect the practice of CEQA and land use planning. The emerging role of CEQA in addressing climate change and greenhouse gas emissions has been the topic of much discussion and debate in recent months. This document provides OPR's perspective on the issue.

JUNE 19, 2008

STATE OF CALIFORNIA
Arnold Schwarzenegger, Governor

GOVERNOR'S OFFICE OF PLANNING AND RESEARCH

I. PURPOSE

General scientific consensus and increasing public awareness regarding global warming and climate change have placed new focus on the California Environmental Quality Act (CEQA) review process as a means to address the effects of greenhouse gas (GHG) emissions from proposed projects on climate change. Many public agencies—along with academic, business, and community organizations—are striving to determine the appropriate means by which to evaluate and mitigate the impacts of proposed projects on climate change. Approaches and methodologies for calculating GHG emissions and addressing the environmental impacts through CEQA review are rapidly evolving and are increasingly available to assist public agencies to prepare their CEQA documents and make informed decisions.

The Governor's Office of Planning and Research (OPR) will develop, and the California Resources Agency (Resources Agency) will certify and adopt amendments to the Guidelines implementing the California Environmental Quality Act ("CEQA Guidelines"), on or before January 1, 2010, pursuant to Senate Bill 97 (Dutton, 2007). These new CEQA Guidelines will provide regulatory guidance on the analysis and mitigation of GHG emissions in CEQA documents. In the interim, OPR offers the following informal guidance regarding the steps lead agencies should take to address climate change in their CEQA documents. This guidance was developed in cooperation with the Resources Agency, the California Environmental Protection Agency (Cal/EPA), and the California Air Resources Board (ARB).

II. BACKGROUND

Climate change refers to any significant change in measures of climate, such as average temperature, precipitation, or wind patterns over a period of time. Climate change may result from natural factors, natural processes, and human activities that change the composition of the atmosphere and alter the surface and features of the land. Significant changes in global climate patterns have recently been associated with global warming, an average increase in the temperature of the atmosphere near the Earth's surface, attributed to accumulation of GHG emissions in the atmosphere. Greenhouse gases trap heat in the atmosphere, which in turn heats the surface of the Earth. Some GHGs occur naturally and are emitted to the atmosphere through natural processes, while others are created and emitted solely through human activities. The emission of GHGs through the combustion of fossil fuels (i.e., fuels containing carbon) in conjunction with other human activities, appears to be closely associated with global warming.

State law defines GHG to include the following: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride (Health and Safety Code, section 38505(g).) The most common GHG that results from human activity is carbon dioxide, followed by methane and nitrous oxide.

Requirements of AB 32 and SB 97

Assembly Bill 32 (AB 32), the California Global Warming Solutions Act of 2006 (Nunez, 2006), recognizes that California is the source of substantial amounts of GHG emissions. The statute begins with several legislative findings and declarations of intent, including the following:

> Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snow pack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems. (Health and Safety Code, section 38501.)

In order to avert these consequences, AB 32 establishes a state goal of reducing GHG emissions to 1990 levels by the year 2020 (a reduction of approximately 25 percent from forecast emission levels) with further reductions to follow. The law requires the ARB to establish a program to track and report GHG emissions; approve a scoping plan for achieving the maximum technologically feasible and cost effective reductions from sources of GHG emissions; adopt early reduction measures to begin moving forward; and adopt, implement and enforce regulations – including market mechanisms such as "cap-and-trade" programs – to ensure the required reductions occur. The ARB recently adopted a statewide GHG emissions limit and an emissions inventory, along with requirements to measure, track, and report GHG emissions by the industries it determined to be significant sources of GHG emissions.

CEQA requires public agencies to identify the potentially significant effects on the environment of projects they intend to carry out or approve, and to mitigate significant effects whenever it is feasible to do so. While AB 32 did not amend CEQA to require new analytic processes to account for the environmental impacts of GHG emissions from projects subject to CEQA, it does acknowledge that such emissions cause significant adverse impacts to human health and the environment.

Senate Bill 97, enacted in 2007, amends the CEQA statute to clearly establish that GHG emissions and the effects of GHG emissions are appropriate subjects for CEQA analysis. It directs OPR to develop draft CEQA Guidelines "for the mitigation of greenhouse gas emissions or the effects of greenhouse gas emissions" by July 1, 2009 and directs the Resources Agency to certify and adopt the CEQA Guidelines by January 1, 2010.

Requirements of CEQA

CEQA is a public disclosure law that requires public agencies to make a

good-faith, reasoned effort, based upon available information, to identify the potentially significant direct and indirect environmental impacts—including cumulative impacts— of a proposed project or activity. The CEQA process is intended to inform the public of the potential environmental effects of proposed government decisions and to encourage informed decision-making by public agencies. In addition, CEQA obligates public agencies to consider less environmentally-damaging alternatives and adopt feasible mitigation measures to reduce or avoid a project's significant impacts.

The lead agency is required to prepare an Environmental Impact Report (EIR), a Mitigated Negative Declaration, or equivalent document, when it determines that the project's impacts on the environment are potentially significant. This determination of significance must be based upon substantial evidence in light of all the information before the agency.

Although the CEQA Guidelines, at Appendix G, provide a checklist of suggested issues that should be addressed in an EIR, neither the CEQA statute nor the CEQA Guidelines prescribe thresholds of significance or particular methodologies for performing an impact analysis. This is left to lead agency judgment and discretion, based upon factual data and guidance from regulatory agencies and other sources where available and applicable. A threshold of significance is essentially a regulatory standard or set of criteria that represent the level at which a lead agency finds a particular environmental effect of a project to be significant. Compliance with a given threshold means the effect normally will be considered less than significant. Public agencies are encouraged but not required to adopt thresholds of significance for environmental impacts. Even in the absence of clearly defined thresholds for GHG emissions, the law requires that such emissions from CEQA projects must be disclosed and mitigated to the extent feasible whenever the lead agency determines that the project contributes to a significant, cumulative climate change impact.

We realize that perhaps the most difficult part of the climate change analysis will be the determination of significance. Although lead agencies typically rely on local or regional definitions of significance for most environmental issues, the global nature of climate change warrants investigation of a statewide threshold of significance for GHG emissions. To this end, OPR has asked ARB technical staff to recommend a method for setting thresholds which will encourage consistency and uniformity in the CEQA analysis of GHG emissions throughout the state. Until such time as state guidance is available on thresholds of significance for GHG emissions, we recommend the following approach to your CEQA analysis.

III. RECOMMENDED APPROACH

Each public agency that is a lead agency for complying with CEQA needs to develop its own approach to performing a climate change analysis for projects that generate GHG emissions. A consistent approach should be applied for the analysis of all such projects, and the analysis must be based on best available information. For these projects, compliance with CEQA entails three basic steps: identify and quantify the GHG emissions; assess the significance of the impact on climate change; and if the impact is found to be significant, identify alternatives and/or mitigation measures that will reduce the impact below significance.

Lead agencies should determine whether greenhouse gases may be generated by a proposed project, and if so, quantify or estimate the GHG emissions by type and source. Second, the lead agency must assess whether those emissions are individually or cumulatively significant. When assessing whether a project's effects on climate change are "cumulatively considerable" even though its GHG contribution may be individually limited, the lead agency must consider the impact of the project when viewed in connection with the effects of past, current, and probable future projects. Finally, if the lead agency determines that the GHG emissions from the project as proposed are potentially significant, it must investigate and implement ways to avoid, reduce, or otherwise mitigate the impacts of those emissions. Although the scientific knowledge and understanding of how best to perform this analysis is rudimentary and still evolving, many useful resources are available (see Attachment 1).

Until such time as further state guidance is available on thresholds of significance, public agencies should consider the following general factors when analyzing whether a proposed project has the potential to cause a significant climate change impact on the environment.

Identify GHG Emissions

- Lead agencies should make a good-faith effort, based on available information, to calculate, model, or estimate the amount of CO_2 and other GHG emissions from a project, including the emissions associated with vehicular traffic, energy consumption, water usage and construction activities.
- Technical resources, including a variety of modeling tools, are available to assist public agencies to quantify GHG emissions. OPR recognizes that more sophisticated emissions models for particular types of projects are continually being developed and that the state-of-the-art quantification

models are rapidly changing. OPR will periodically update the examples of modeling tools identified in Attachment 2.

- There is no standard format for including the analysis in a CEQA document. A GHG/climate change analysis can be included in one or more of the typical sections of an EIR (e.g., air quality, transportation, energy) or may be provided in a separate section on cumulative impacts or climate change.

Determine Significance

- When assessing a project's GHG emissions, lead agencies must describe the existing environmental conditions or setting, without the project, which normally constitutes the baseline physical conditions for determining whether a project's impacts are significant.
- As with any environmental impact, lead agencies must determine what constitutes a significant impact. In the absence of regulatory standards for GHG emissions or other scientific data to clearly define what constitutes a "significant impact", individual lead agencies may undertake a project-by-project analysis, consistent with available guidance and current CEQA practice.
- The potential effects of a project may be individually limited but cumulatively considerable. Lead agencies should not dismiss a proposed project's direct and/or indirect climate change impacts without careful consideration, supported by substantial evidence. Documentation of available information and analysis should be provided for any project that may significantly contribute new GHG emissions, either individually or cumulatively, directly or indirectly (e.g., transportation impacts).
- Although climate change is ultimately a cumulative impact, not every individual project that emits GHGs must necessarily be found to contribute to a significant cumulative impact on the environment. CEQA authorizes reliance on previously approved plans and mitigation programs that have adequately analyzed and mitigated GHG emissions to a less than significant level as a means to avoid or substantially reduce the cumulative impact of a project.

Mitigate Impacts

- Mitigation measures will vary with the type of project being contemplated, but may include alternative project designs or locations that conserve energy and water, measures that reduce vehicle miles traveled

(VMT) by fossil-fueled vehicles, measures that contribute to established regional or programmatic mitigation strategies, and measures that sequester carbon to offset the emissions from the project.

- The lead agency must impose all mitigation measures that are necessary to reduce GHG emissions to a less than significant level. CEQA does not require mitigation measures that are infeasible for specific legal, economic, technological, or other reasons. A lead agency is not responsible for wholly eliminating all GHG emissions from a project; the CEQA standard is to mitigate to a level that is "less than significant".
- If there are not sufficient mitigation measures that the lead agency determines are feasible to achieve the less than significant level, the lead agency should adopt those measures that are feasible, and adopt a Statement of Overriding Considerations that explains why further mitigation is not feasible. A Statement of Overriding Considerations must be prepared when the lead agency has determined to approve a project for which certain impacts are unavoidable. These statements should explain the reasons why the impacts cannot be adequately mitigated in sufficient detail, and must be based on specific facts, so as not to be conclusory.
- Agencies are encouraged to develop standard GHG emission reduction or mitigation measures that can be applied on a project-by-project basis. Attachment 3 contains a preliminary menu of measures that lead agencies may wish to consider. This list is by no means exhaustive or prescriptive. Lead agencies are encouraged to develop their own measures and/or propose project alternatives to reduce GHG emissions, either at a programmatic level or on a case-by-case review.
- In some cases GHG emission reduction measures will not be feasible or may not be effective at a project level. Rather, it may be more appropriate and more effective to develop and adopt program-level plans, policies and measures that will result in a reduction of GHG emissions on a regional level.

IV. ADDITIONAL LAND USE CONSIDERATIONS

CEQA can be a more effective tool for GHG emissions analysis and mitigation if it is supported and supplemented by sound development policies and practices that will reduce GHG emissions on a broad planning scale and that can provide the basis for a programmatic approach to project-specific CEQA analysis and mitigation.

Local governments with land use authority are beginning to establish policies that result in land use patterns and practices that will result in less energy use and reduce GHG emissions. For example, some cities and counties have adopted general plans and policies that encourage the development of compact, mixed-use, transit-oriented development that reduces VMT; encourage alternative fuel vehicle use; conserve energy and water usage; and promote carbon sequestration. Models of such developments exist throughout the state (see OPR climate change website for examples of city and county plans and policies, referenced in Attachment 1).

For local government lead agencies, adoption of general plan policies and certification of general plan EIRs that analyze broad jurisdiction-wide impacts of GHG emissions can be part of an effective strategy for addressing cumulative impacts and for streamlining later project-specific CEQA reviews.

International, national, and statewide organizations such as ICLEI (Local Governments for Sustainability), the Cities for Climate Protection, and the Clean Cities Coalition —to name just a few — have published guidebooks to help local governments reduce GHG emissions through land use planning techniques and improved municipal operations. Links to these resources are provided at the end of this advisory.

Regional agencies can also employ a variety of strategies to reduce GHG emissions through their planning processes. For example, regional transportation planning agencies adopt plans and programs that address congestion relief, jobs-to-housing balance, reduction of vehicle miles traveled (VMT), and other issues that have implications for GHG emission reductions.

State agencies are also tackling the issue of climate change. Some have adopted or support policies and programs that take climate change into account, including the Department of Water Resources' State Water Plan; the Department of Transportation's State Transportation Plan; and the Business, Housing and Transportation Agency's Regional Blueprint Planning Program. These efforts not only raise public awareness of climate change and how the State can reduce GHG emissions, but also offer specific information and resources for lead agencies to consider.

V. NEXT STEPS

OPR has asked ARB technical staff to recommend a method for setting a threshold of significance for GHG emissions. OPR has requested that the ARB identify a range of feasible options, including qualitative and quantitative options.

OPR is actively seeking input from the public and stakeholder groups, as it develops draft CEQA Guidelines for GHG emissions. OPR is engaged with the Resources Agency and other expert state agencies, local governments, builders and developers, environmental organizations, and others with expertise or an interest in the development of the Guidelines.

OPR will conduct public workshops later this year to receive input on the scope and content of the CEQA Guidelines amendments. It is OPR's intent to release a preliminary draft of the CEQA Guidelines amendments for public review and comment in the fall. This will enable OPR to deliver a proposed package of CEQA Guidelines amendments to the Resources Agency as early as January 2009, well before the statutory due date of July 1, 2009.

We encourage public agencies and the public to refer to the OPR website at www.opr.ca.gov for information about the CEQA Guidelines development process and to subscribe to OPR's notification system for announcements and updates.

Technical Resources/Modeling Tools to Estimate GHG Emissions

TOOL	AVAILABILITY	SCOPE LOCAL/ REGIONAL	SCOPE TRANSPORTATION/ BUILDINGS	DATA INPUT REQUIREMENTS	DATA OUTPUT
URBEMIS	• Download • Public domain (free)	• Local project level	• Transportation • Some building (area source) outputs • Construction	• Land use information • Construction, area source, and transportation assumptions	• CO2 (pounds per day) • Mitigation impacts
Clean Air and Climate Protection (CACP) Software	• Download • Available to public agencies (free)	• Local project level	• Buildings • Communities • Governments	• Energy usage • Waste generation and disposal • Transportation fuel usage or VMT	• CO2e (tons per year)
Sustainable Communities Model (SCM)	• Custom model	• Regional • Scalable to site level	• Transportation • Buildings • Neighborhoods • Master planned communities	• Location and site specific information • Transportation assumptions • On-site energy usage	• CO2e (tons per year)
Internet-accessed Planning for Community Energy, Economic and Environmental Sustainability I-PLACE^{3}S	• Web-based • Small access fee • Full model now available in eight CA counties	• Regional • Scalable to site level	• Transportation • Housing • Land Use • Buildings • Energy • Economics	• Parcel level land use data (ability to work with less data) • Project-level data for alternative comparisons	• CO2 (any quantity over any time)
Climate Action Registry Reporting On-Line Tool (CARROT)	• Web-based • Available to Registry members • General public can view entity reports	• Regional, scalable to entity and facility level	• General Reporting and Certification Protocols o Transportation o Buildings/facilities • Specific protocols for some sectors	• Mobile source combustion (VMT or fuel usage) • Stationary combustion (fuel usage) • Indirect emissions (electricity usage)	• Each GHG and CO2e (tons per year)
EMFAC	• Download • Public domain (free)	• Statewide • Regional (air basin level)	• Transportation emission factors	• Travel activity data to calculate CO2 from projects.	• CO2 and methane (grams per mile) emission factors

VMT = Vehicle miles traveled
eCO2 = Carbon dioxide equivalent emissions
Note: This is not meant to be a definitive list of modeling tools to estimate climate change emissions impacts. Other tools may be available.

Description of Modeling Tools

URBEMIS

The Urban Emissions Model is used extensively during the CEQA process by local air districts and consultants to determine the impacts of projects on criteria pollutants. It was recently updated to calculate CO2 emissions as well. Future updates will include additional greenhouse gases. URBEMIS uses the ITE Trip Generation Rate Manual and the Air Resources Board's (ARB) motor vehicle emissions model (EMFAC) to calculate transportation-related CO2 emissions and ARB's OFFROAD2007 model for CO2 emissions from off-road equipment. Area source outputs include natural gas use, landscaping equipment, consumer products, architectural coatings, and fireplaces. It also estimates construction impacts and impacts of mitigation options. Web site: http://www.urbemis.com.

Clean Air and Climate Protection (CACP) Software

This tool is available to state and local governments and members of ICLEI, NACAA, NASEO and NARUC to determine greenhouse gas and criteria pollutant emissions from government operations and communities as a whole. The user must input aggregate information about energy (usage), waste (quantity and type generated, disposal method, and methane recovery rate) and transportation (VMT) for community analyses. CACP uses emission factors from EPA, DOE, and DOT to translate the energy, waste and transportation inputs into greenhouse gas (in carbon dioxide equivalents) and criteria air pollutant emissions. If associated energy, waste and transportation reduction are provided, the model can also calculate emission reductions and money saved from policy alternatives. Web site: http://cacpsoftware.org.

Sustainable Communities Model (SCM)

This model quantifies total CO2e emissions allowing communities the ability to optimize planning decisions that result in the greatest environmental benefit for the least cost. Total CO2e emissions are based on emissions from energy usage, water consumption and transportation. The model provides an interactive comparison of various scenarios to provide environmental performance, economic performance, and cost benefit analysis.

Web site: www.ctg-net.com/energetics/documents/doc_SCM_070731.pdf

I-PLACE^{3}S

This model is an internet-accessed land use and transportation model designed specifically for regional and local governments to help understand how their growth and development decisions can contribute to improved sustainability. It estimates CO2, criteria pollutant and energy impacts on a neighborhood or

regional level for existing, long-term baseline and alternative land use plans. The data input requirements are extensive and require a fiscal commitment from the Metropolitan Planning Organization and its member local governments. Once the data is available, the IPLACES tool can be developed for that region relatively quickly, in approximately one week. The benefits include a multifunctional tool that provides immediate outputs to compare alternatives during public meetings, multilevel password protected on-line access, as well as providing access for local development project CEQA analyses. This tool also supports regional travel models and integrated land use and transportation assessments. Web site: http://www.sacregionblueprint.org/sacregionblueprint/the_project/technology.cfm and http://www.places.energy.ca.gov/places

CARROT

The California Climate Action Registry offers the Climate Action Registry Reporting On-Line Tool (CARROT) for Registry members to calculate and report annual greenhouse gas (GHG) emissions. CARROT calculates direct and indirect GHG emissions for the following emission categories by source: stationary combustion, process emissions, mobile source combustion, fugitive emissions and electricity use by source. It calculates emissions using entity collected data such as fuel purchase records, VMT and utility bills. While reporting and certification through CARROT is only available to members, the public may access entity reports online. Reporting protocols are also available to the public, including the General Reporting Protocol (www.climateregistry.org/docs/PROTOCOLS/GRP%20V2-March2007_web.pdf) and cement, forestry and power/utility sector protocols. Additional sector protocols are under development. Website: www.climateregistry.org/CARROT/

EMFAC

The Air Resources Board's EMission FACtors (EMFAC) model is used to calculate emission rates from all motor vehicles in California. The emission factors are combined with data on vehicle activity (miles traveled and average speeds) to assess emission impacts. The URBEMIS model described above uses EMFAC to calculate the transportation emission impacts of local projects. Web site: http://www.arb.ca.gov/msei/onroad/onroad.htm

Attachment 3

Examples of GHG Reduction Measures

The following are examples of measures that have been employed by some public agencies to reduce greenhouse gas emissions, either as general development policies or on a project-by-project basis. These are provided for illustrative purposes only.

LAND USE AND TRANSPORTATION

- Implement land use strategies to encourage jobs/housing proximity, promote transit-oriented development, and encourage high density development along transit corridors. Encourage compact, mixed-use projects, forming urban villages designed to maximize affordable housing and encourage walking, bicycling and the use of public transit systems.
- Encourage infill, redevelopment, and higher density development, whether in incorporated or unincorporated settings
- Encourage new developments to integrate housing, civic and retail amenities (jobs, schools, parks, shopping opportunities) to help reduce VMT resulting from discretionary automobile trips.
- Apply advanced technology systems and management strategies to improve operational efficiency of transportation systems and movement of people, goods and services.
- Incorporate features into project design that would accommodate the supply of frequent, reliable and convenient public transit.
- Implement street improvements that are designed to relieve pressure on a region's most congested roadways and intersections.
- Limit idling time for commercial vehicles, including delivery and construction vehicles.

URBAN FORESTRY

- Plant trees and vegetation near structures to shade buildings and reduce energy requirements for heating/cooling.
- Preserve or replace onsite trees (that are removed due to development) as a means of providing carbon storage.

GREEN BUILDINGS

- Encourage public and private construction of LEED (Leadership in Energy and Environmental Design) certified (or equivalent) buildings.

ENERGY CONSERVATION POLICIES AND ACTIONS

- Recognize and promote energy saving measures beyond Title 24 requirements for residential and commercial projects
- Where feasible, include in new buildings facilities to support the use of low/zero carbon fueled vehicles, such as the charging of electric vehicles from green electricity sources.
- Educate the public, schools, other jurisdictions, professional associations, business and industry about reducing GHG emissions.
- Replace traffic lights, street lights, and other electrical uses to energy efficient bulbs and appliances.
- Purchase Energy Star equipment and appliances for public agency use.
- Incorporate on-site renewable energy production, including installation of photovoltaic cells or other solar options.
- Execute an Energy Savings Performance Contract with a private entity to retrofit public buildings. This type of contract allows the private entity to fund all energy improvements in exchange for a share of the energy savings over a period of time.
- Design, build, and operate schools that meet the Collaborative for High Performance Schools (CHPS) best practices.
- Retrofit municipal water and wastewater systems with energy efficient motors, pumps and other equipment, and recover wastewater treatment methane for energy production.
- Convert landfill gas into energy sources for use in fueling vehicles, operating equipment, and heating buildings.
- Purchase government vehicles and buses that use alternatives fuels or technology, such as electric hybrids, biodiesel, and ethanol. Where feasible, require fleet vehicles to be low emission vehicles. Promote the use of these vehicles in the general community.
- Offer government incentives to private businesses for developing buildings with energy and water efficient features and recycled materials. The incentives can include expedited plan checks and reduced permit fees.
- Offer rebates and low-interest loans to residents that make energy-saving improvements on their homes.

Governor's Office of Planning and Research
CEQA AND CLIMATE CHANGE:
Attachments

- Create bicycle lanes and walking paths directed to the location of schools, parks and other destination points.

PROGRAMS TO REDUCE VEHICLE MILES TRAVELED

- Offer government employees financial incentives to carpool, use public transportation, or use other modes of travel for daily commutes.
- Encourage large businesses to develop commute trip reduction plans that encourage employees who commute alone to consider alternative transportation modes.
- Develop shuttle systems around business district parking garages to reduce congestion and create shorter commutes.
- Create an online ridesharing program that matches potential carpoolers immediately through email.
- Develop a Safe Routes to School program that allows and promotes bicycling and walking to school.

PROGRAMS TO REDUCE SOLID WASTE

- Create incentives to increase recycling and reduce generation of solid waste by residential users.
- Implement a Construction and Demolition Waste Recycling Ordinance to reduce the solid waste created by new development.
- Add residential/commercial food waste collection to existing greenwaste collection programs.

Mr. Christopher Koontz
Los Angeles World Airports
1 World Way, Room 218
Los Angeles, CA 90045

Dear Mr. Koontz,

Subject: Comments from the Los Angeles Department of Water and Power on the Los Angeles International Airport Landslide Access Modernization Program Draft Environmental Impact Report

The Los Angeles Department of Water and Power (LADWP) appreciates the opportunity to review and provide comments on the Draft Environmental Impact Report (DEIR) for the Los Angeles International Airport (LAX) Landside Access Modernization Program (LAMP). LADWP maintains a number of critical water facilities within the limits of the proposed LAMP Project. As acknowledged in the DEIR, the LAMP Project will have impacts to existing water distribution lines and will require continued coordination between Los Angeles World Airports (LAWA) and LADWP regarding the relocation and installation of these water facilities in order to provide adequate water supply to the LAMP Project and comply with the City of Los Angeles' water sustainability goals. However, in reviewing the LAWA LAMP proposed project description, LADWP notes the omission of the planned replacement of the existing 36-inch trunk line on Century Boulevard. This trunk line is a critical part of the LADWP Water System that provides reliable water supply to LAX.

Due to its age and history, the Century Boulevard Trunk Line Project has been added to LADWP's 10-year Capital Improvement Program. The Century Blvd Trunk Line Project consists of replacing approximately three miles of the existing 36-inch diameter welded steel trunk line on Century Boulevard between Sepulveda Boulevard and Prairie Avenue. The most critical portion is approximately 5,600 feet located between Sepulveda Boulevard and Aviation Boulevard, which has a history of leaks and repairs. The new water line will be 48 inches in diameter and will increase operational flexibility to serve the LAX area. Depending on the final route, the total project length could be up to 3.5 miles, of which approximately 1.5 miles would be in the City of Inglewood.

Putting Our Customers First

111 N. Hope Street, Los Angeles, California 90012-2607 *Mailing Address:* Box 51111, Los Angeles, CA 90051-5700
Telephone (213) 367-4211 www.LADWP.com

LAMP-AL00009

Mr. Christopher Koontz
Page 2
November 15, 2016

Coordination between LADWP and the LAX LAMP Project Teams is critical to determine the most appropriate alignment that minimizes impacts to the area. LADWP requests that a separate monthly coordination meeting be established between both parties to ensure the success of both projects.

LADWP respectfully requests that the Century Boulevard Trunk Line Project be included in the environmental review of the LAX LAMP Project. For questions or concerns specific to the Century Boulevard Trunk Line Project and proposed coordination meetings, please contact Ms. Annette Flores from our Water Engineering & Technical Services Division at (213) 367-0827 or at Annette.Flores@ladwp.com. For matters regarding the CEQA approach, please contact Mr. Christopher Lopez of my staff at (213) 367-3509 or at Christopher.Lopez@ladwp.com.

Thank you again, for this opportunity to review and comment on the Draft Environmental Impact Report for the LAX Landside Access Modernization Program.

Sincerely,

Nadia A Parkin for

Charles C. Holloway
Manager of Environmental Planning and Assessment

LAMP-AL00009

From: latwell@cityofinglewood.org
To: LAX Stakeholder Liaison
Subject: Stakeholder Comment Submitted - Ref. No. 161115180217
Date: Tuesday, November 15, 2016 6:02:29 PM

This is to inform you that a comment form was submitted.

Reference No.:	161115180217
Date Submitted:	11/15/2016
From:	Louis A Atwell
Email:	latwell@cityofinglewood.org
Company Name:	City of Inglewood,
Address:	One West Manchester Boulevard
City:	Inglewood
State:	CA
Zip Code:	90301
Project Name:	LAMP DEIR
Other Comments:	The City of Inglewood appreciates working with LAWA during the EIR process. However, the Project has significant traffic impacts in the City of Inglewood. The Project significantly increases traffic on Century Boulevard, Manchester Boulevard, Arbor Vitae Street, Imperial Highway, Crenshaw Boulevard, Prairie Avenue and La Brea Avenue. The City is concerned that the proposed Transportation Demand Management program is unclear on how it will be measured and implemented and how will it address traffic impacts directly affecting the City of Inglewood. The City of Inglewood also has concerns about the phasing of roadway construction. It is anticipated that because of the Projects very tight schedule, most arterial roadways slated to be improved will occur almost simultaneously. The City would like clearer detail on the Construction Management Plan and associated mitigation measures. The City believes that the identified traffic mitigation measures in the City of Inglewood should be implemented prior to commencement of construction of the Project. The City looks forward to working with LAWA in addressing these concerns.

City of Los Angeles
Councilmember, Eleventh District

NOV 15 4:58PM

November 15, 2016

Ms. Evelyn Quintanilla
Chief of Airport Planning
Los Angeles World Airports
P.O. Box 92216, Los Angeles, CA 90009

Dear Ms. Quintanilla,

Thank you for the opportunity to comment on the Draft Environmental Impact Report (Draft EIR) for Los Angeles World Airport's (LAWA's) Landside Access Modernization Program (LAMP) at Los Angeles International Airport (LAX).

As a member of the Board of Directors for the Los Angeles County Metropolitan Transportation Authority (Metro) and the Councilmember representing the Eleventh District in the City of Los Angeles, I am very proud of the work that LAWA has completed to date to release the Draft EIR for the LAMP project. This is a major milestone for the City of Los Angeles as it gets us one step closer to delivering a nearly $5.5 billion modernization program focused on improving access to and from the airport, connecting the regional Metro Rail system to LAX, reducing traffic congestion, and enhancing the overall passenger experience.

This is a transformational project for the City of Los Angeles and the region as a whole. Therefore, a detailed analysis of how LAMP may affect the region and the surrounding community along with a robust plan for mitigation of any potential impacts are important components of the Draft EIR. I understand that several key stakeholders and community groups have provided comments on the Draft EIR, and I am confident LAWA will address those comments thoroughly in the Final EIR for the project. As LAWA moves forward with the Final EIR, I would like to bring to your attention a few additional items that are critical to the project's success including the following:

1. Transportation Demand Management
   LAWA's proposed mitigation measure MM-ST (LAMP)-6, Transportation Demand Management (TDM) Program, for LAX employees and the hotel / office employees working in the adjacent Gateway to Los Angeles Business Improvement District (BID), is a critical element for the success of LAMP. Together, these employees represent a large share of the daily traffic traveling into and around the airport. By implementing the TDM Program and providing these employees alternative modes of transportation to access their workplace, LAWA can significantly reduce daily automobile trips into the airport area and improve traffic flow. As a member of the Metro Board of Directors, it is my goal to encourage alternative modes of transportation to LAX. Therefore, I encourage LAWA to begin taking the steps necessary to implement this mitigation measure *now*, rather than waiting to begin implementation of such a critical measure until the start of construction for the LAMP program.

(213) 473-7011
(213) 473-6926 Fax

West Los Angeles Office
1645 Corinth Avenue, Room 201
Los Angeles, CA 90025
(310) 575-8461
(310) 575-8305 Fax

2. Construction Traffic Project Task Force
   LAWA's proposed mitigation measure MM-ST (LAMP)-1, Construction Traffic Project Task Force, is similarly critical. The establishment of a task force to focus on construction traffic related impacts is necessary to ensure that we maintain a world class passenger experience during construction and that we effectively coordinate all construction traffic impacts / mitigations directly with our key local stakeholders including, but not limited to, the Westchester Town Center BID and the Gateway to Los Angeles BID. A large amount of construction will occur on public roadways outside of the airport and we therefore must ensure traffic managements plans, including street closures and detour routes, are coordinated with the commercial districts adjacent to LAX. I applaud LAWA's commitment to establish this Task Force and strongly support this work effort moving forward.

3. Integrated Urban Environment with Functional and Attractive Design
   Another key element to the overall success of the project is ensuring that LAMP is compatible with and enhances the character of the surrounding community. In order to achieve compatibility, it is important to ensure that the design and construction of the various off-airport LAMP project components provide an integrated urban environment with functional and attractive architecture, as well as safe and convenient pedestrian and bicycle connections that create a sense of place along Century Boulevard and the surrounding street network. A majority of the LAMP project components are located off-airport throughout the adjacent hotel and office business district. This area is considered by many to be the Gateway to Los Angeles, as it is the first or last impression of the City for millions of visitors traveling through LAX. For this reason, we must ensure the various LAMP facilities adhere to the project's design guidelines and meet a world class level of architecture and design. In addition, various LAMP project components will be located within walking and biking distance to transit and many hotel, office and commercial amenities. We must ensure there are safe and convenient pedestrian and bicycle connections to each of these facilities, including the Metro Crenshaw / LAX Line's Aviation / Century transit station.

4. Sustainable Design, Construction, and Operations
   The LAMP project must set the bar for sustainable development. Therefore, the project must require implementation of the highest standards for sustainability in design, construction, and operations for each of the LAMP project components including, but not limited to, energy and water conservation measures such as solar energy capture, electric vehicle chargers, and LEED certification.

Lastly, as LAWA continues to move forward with the detailed design of the Automated People Mover system and its integration with the Airport Metro Connector 96th Street Transit Station, we must ensure there is a seamless connection between the two facilities that reduces walking distances and improves the travel experience for all passengers. I commend both LAWA's and Metro's collaborative efforts to date to achieve this and look forward to further collaboration as both agencies proceed with detailed designs.

Thank you again for the opportunity to comment on the Draft EIR. This project is vital to building not only a world-class airport with unmatched passenger conveniences, but also a first-class neighbor to the surrounding communities. Should you have any questions regarding this letter, please contact my LAX Community Liaison, Omar Pulido, at (323) 740-0494 or at omar.pulido@lacity.org.

Re: MRO Engineers' Report re Landside Access Modernization Program Draft Environmental Impact Report

Dear Ms. Quintanilla:

On behalf of the City of El Segundo, we submit the following report prepared by Neal Liddicoat with MRO Engineers. Mr. Liddicoat, a traffic engineer, has reviewed the Draft Environmental Impact Report's ("DEIR") transportation/traffic analysis for the Landside Access Modernization Program. The MRO Engineers' report identifies potentially significant deficiencies in the DEIR's transportation/traffic analysis that LAWA should carefully evaluate as part of an informative and comprehensive EIR.

Very truly yours,

SHUTE, MIHALY & WEINBERGER LLP

Subject: ***Review of Transportation/Traffic Analysis***
Draft Environmental Impact Report
Los Angeles International Airport (LAX) Landside Access Modernization Program
Los Angeles, California

Dear Ms. Impett:

As requested, MRO Engineers, Inc., (MRO) has reviewed the "Transportation/Traffic" section of the Draft Environmental Impact Report (DEIR) for the Los Angeles International Airport (LAX) Landside Access Modernization Program (Los Angeles World Airports, September 2016). The "Transportation/Traffic" section of the DEIR is based on a traffic impact analysis prepared by Raju Associates (Raju). (Reference: Raju Associates, Inc., *Draft Transportation Study for the Landside Access Modernization Program DEIR*, September, 2016.) The Raju traffic study is presented as Appendix O to the DEIR.

Our review focused on the technical adequacy of the Transportation/Traffic analysis, including the detailed procedures and conclusions documented in the Raju study.

Transportation/Traffic Analysis Review

Our review of the DEIR Transportation/Traffic analysis revealed potentially significant deficiencies that should be addressed prior to approval of the project and its related environmental documentation by the City of Los Angeles. These issues are summarized below.

1. ***Traffic Volume Data Does Not Accurately Represent LAX Activity*** – Traffic volume data for the 183 study intersections was collected at various times between 2013 and 2015. The traffic count summary sheets for 179 of the study intersections are presented in DEIR Appendix O. The years in which those traffic counts were conducted are summarized below:
   - 2016 – 3 locations,
   - 2015 – 130 locations,
   - 2014 – 40 locations, and
   - 2013 – 6 locations.

   DEIR p. 4.12-59 presents slightly different information regarding when the counts used in the study were performed:
   - 2016 – 0 locations,
   - 2015 – 133 locations,

- 2014 – 44 locations, and
- 2013 – 6 locations.

Of greater interest are the months in which the data were collected, according to the data sheets in Appendix O:

- January – 3 locations,
- February – 3 locations,
- March – 76 locations,
- April – 38 locations,
- May – 4 locations,
- June – 0 locations,
- July – 23 locations,
- August – 0 locations,
- September – 13 locations,
- October – 13 locations,
- November – 0 locations,
- December – 6 locations,

DEIR p. 4.12-11 provides information regarding monthly traffic activity in the LAX Central Terminal Area (CTA) for the years 2006 through 2014. As described there:

> *. . . CTA traffic reached peak activity during the summer months of June, July and August. August is typically the peak month for Airport roadway traffic followed closely by July. For the purposes of this analysis, August 2014 was used as the peak month for traffic data, because the field data was collected in August. Although July had slightly more passengers in 2014, the analysis was based on a peak month average day in August.*

This quote specifically applies to the analysis of on-airport traffic conditions, but it also relates to the off-airport traffic analysis, since the two systems are inextricably linked; all vehicles traveling to or from the on-airport road system must also use the off-airport road system. For that reason, it is instructive to compare the intersection data collection schedule to the level of traffic activity at LAX. Table 1 presents that comparison, with the CTA average daily traffic volumes ranked from highest month to lowest month.

Table 1
CTA Traffic Volume Data vs. Data Collection Schedule

CTA Traffic Volume Data[1]			Intersection Counts[2]		
Month	Average Daily Traffic[3]	Monthly Ranking	Monthly Ranking	No.	%
August	77,311	1	10	0	0.0%
July	76,476	2	3	23	12.8%
June	75,635	3	10	0	0.0%
December	72,647	4	6	6	3.4%
May	71,404	5	7	4	2.2%
April	69,091	6	2	38	21.2%
November	69,064	7	10	0	0.0%
March	67,996	8	1	76	42.5%
September	67,838	9	4	13	7.3%
October	67,418	10	4	13	7.3%
January	65,673	11	8	3	1.7%
February	63,553	12	8	3	1.7%

Notes:
[1] Source: DEIR Table 4.12.1-2: CTA Average Daily Traffic Volumes, p. 4.12-11.
[2] Source: DEIR Appendix O.
[3] Overall average of all data points in DEIR Table 4.12.1-2 is 70,358 vehicles per day.

While August has historically had the highest average daily traffic volumes in the CTA, none of the intersection traffic counts used in the DEIR Transportation/Traffic analysis were performed in that month. This is also true for June, which is the third busiest month in the CTA. In July, the second busiest month, 23 (12.8 percent) of the 179 counts were performed.

The largest number of intersection traffic counts (76 counts, representing 42.5 percent of the counts) were conducted in March, which is the eighth busiest month in the CTA. Thirty-eight counts (21.2 percent) were performed in April, which is the sixth busiest month in the CTA. The average daily traffic volumes in those two months are 88 – 90 percent of the August volumes. In addition, they are somewhat below the overall average value of 70,358 vehicles per day, based on all of the data points (from 2006 through 2014) in DEIR Table 4.12.1-2.

Clearly, the "existing conditions" intersection traffic volumes employed in the DEIR analysis are not representative of the level of activity at LAX. Over 60 percent of the counts were performed in the bottom half of the ranking of monthly traffic volumes in the CTA. Only about 13 percent of the counts were conducted in the busiest three months.

In short, the existing traffic volumes are too low to accurately reflect traffic operations in the study area. As a result, the existing conditions level of service findings provide an overly optimistic view of the average vehicular delay and the current level of congestion in the study area. This deficiency will carry through to all subsequent analysis scenarios, so that intersection delays and project-related impacts will be understated.

2. ***Inadequate Midday Study Area*** – As noted above, the study area includes 183 intersections, all of which were included in the AM and PM peak hour analyses. According to DEIR p. 4.12-48:

> *. . . 36 of these intersections (immediately adjacent to or in the vicinity of the Project site) have been selected for a midday off-peak hour traffic impact evaluation.*

However, describing this as an "off-peak hour" analysis might be a misnomer. DEIR Figure 4.12.1-4 illustrates the pattern of arriving and departing passenger volumes over the course of an entire day. The arrival and departure patterns of airline passengers are closely linked to the traffic patterns of LAX as a whole.

According to DEIR p. 4.12-60, the midday traffic counts were generally conducted between 11:00 AM and 2:00 PM. Referring to DEIR Figure 4.12.1-4, a distinct peak in passenger arrival and departure activity is shown at about 11:00 AM. In fact, that peak is clearly higher than the total passenger activity shown in the AM (7:00 - 9:00 AM) and PM (4:00 - 6:00 PM) peak periods, for which all 183 intersections were analyzed.

In short, the midday traffic analysis is not inconsequential, given the LAX activity patterns demonstrated in the DEIR Transportation/Traffic section. This is clearly illustrated in DEIR Table 4.12.2-4, which summarizes the existing trip generation at LAX, as follows:

- AM Peak hour: 12,338 vehicle-trips,
- Midday peak hour: 16,097 vehicle-trips, and
- PM peak hour: 12,840 vehicle-trips.

As shown, the volume of traffic generated at LAX in the midday peak hour is 25 – 30 percent higher than either the AM or PM peak hours.

Therefore, it is inappropriate to limit the midday traffic analysis to the 36 arbitrarily selected locations addressed in the DEIR. In fact, given the factors presented above (i.e., non-representative existing conditions data and the fact that LAX traffic generation is highest in the midday period), we believe that a truly conservative analysis would include all 183 intersections in the midday analysis.

At a minimum, review of DEIR Figure 4.12.2-1 – Traffic Study Intersections (DEIR p. 4.12-55) and the existing conditions level of service (LOS) results presented in DEIR Table 4.12.2-6 (DEIR pp. 4.12-63 – 4.12-71) reveals a number of additional midday analysis candidate locations, each of which is also "adjacent to or in the vicinity of the Project site." Furthermore, each operates at LOS D or worse in either or both of the AM and PM peak hours, which is a reasonable indicator that it might operate poorly in the midday peak hour, as well. The additional midday study intersections are as follows:

- Intersection 21: Lincoln Boulevard/83rd Street (LOS F – AM)
- Intersection 69: Sepulveda Boulevard/Grand Avenue (LOS D – AM & PM)
- Intersection 70: Sepulveda Boulevard/El Segundo Boulevard (LOS D – AM & LOS E – PM)
- Intersection 71: Sepulveda Boulevard/Rosecrans Avenue (LOS E – AM & LOS F – PM)
- Intersection 88: Douglas Street/El Segundo Boulevard (LOS D – PM)

- Intersection 98: Aviation Boulevard/West 120th Street (LOS D – AM)
- Intersection 99: Aviation Boulevard/El Segundo Boulevard (LOS D – AM & LOS E – PM)
- Intersection 100: Aviation Boulevard/Rosecrans Boulevard (LOS E – AM & PM)
- Intersection 126: La Cienega Boulevard/West 120th Street (LOS D – PM)
- Intersection 127: La Cienega Boulevard/El Segundo Boulevard (LOS D – PM)
- Intersection 131: I-405 Northbound Ramps/Imperial Highway (LOS D – PM)
- Intersection 136: Inglewood Avenue/Century Boulevard (LOS D – PM)
- Intersection 137: Inglewood Avenue/Lennox Boulevard (LOS D – AM & LOS E – PM)
- Intersection 138: Inglewood Avenue/Imperial Highway (LOS E – AM & LOS F – PM)

To fully reflect the traffic patterns at LAX and to provide a comprehensive evaluation of the potential impacts of the proposed project, the midday traffic impact analysis must be revised to include these additional study intersections. The revised analysis should then be incorporated into a revised DEIR, which must be circulated for additional public review.

3. ***Obsolete Level of Service Calculation Procedures*** – DEIR p. 4.12-57 states:

> *For the City of Los Angeles study locations, including those shared with other jurisdictions, the* Critical Movement Analysis-Planning[1] *(CMA) method of intersection capacity analysis was used to determine the intersection volume-to-capacity (V/C) ratio and corresponding level of service at the signalized study intersections.*

The footnote in the quote presented above clarifies that the intersection level of service calculations were performed using the Transportation Research Board "Circular 212" method. This methodology was published in a document entitled, *Interim Materials on Highway Capacity* (Transportation Research Board, Transportation Research Circular Number 212, January 1980). As referenced, the document was published in 1980, almost 27 years ago.

The purpose of "Circular 212" was to provide a set of procedures to supplement the 1965 version of the *Highway Capacity Manual* until such time as a fully-updated manual could be published. Such an updated manual was distributed to the traffic engineering profession in 1985. Since that time, additional updated manuals have been published in 1994, 1997, 2000, and the year 2010. Each of these revised versions of the *Highway Capacity Manual* has advanced the technical procedures associated with the analysis of transportation facilities, including intersections, roadway segments, and freeway facilities.

The introduction to the 1980 Circular 212 document addresses the anticipated life span of the procedures documented there, including the following statements:

- "The choice of a Transportation Research Circular as the publication medium has been quite deliberate. By definition, Circulars contain information of immediate interest but not necessarily of long-lasting value."
- ". . . the methods presented here can be put to use until such time as a revised Manual becomes available." [As noted above, that occurred in 1985, followed by subsequent revisions in 1994, 1997, 2000, and 2010.]

- "This report comprises the first set of interim materials which will be distributed prior to the publication of a new "Highway Capacity Manual" in the mid-1980s. These interim materials are intended for application by HCM users in the 1980-1982 period."

It is clear from these statements that the "interim" procedures documented in Circular 212 have long ago outlived their usefulness and have been superseded. Thus, their use in this analysis is inappropriate. To ensure the accuracy of the traffic analysis, the intersection level of service calculations must be performed using the current, year 2010 version of the *Highway Capacity Manual*. (Reference: Transportation Research Board, *Highway Capacity Manual*, Fifth Edition, December 2010.)

In that regard, we note that the analyses of stop-sign-controlled intersections were performed using the 2010 *Highway Capacity Manual* procedures, as were the analyses of facilities under the jurisdiction of Caltrans.

4. ***Inconsistent On-Airport and Off-Airport Traffic Analyses*** – The DEIR presents separate analyses of the on-airport and off-airport transportation systems. It is not clear, however, that those two analyses are consistent with each other, which leads to questions regarding the validity of the results of those analyses. Particular areas of concern are delineated below.

<u>*Analysis Day*</u>

For the on-airport analysis:

> *Friday was selected as the design day as it is typically the busiest overall day of the week for the Airport roadway system.* (DEIR p. 4.12-3)

Although the off-airport analysis text does not explicitly say so, that analysis was based on conditions during the mid-week period (Tuesday through Thursday), which represents the usual method for conducting traffic impact analyses. Evaluation of traffic operations outside the Tuesday through Thursday period is generally not undertaken, because those circumstances might be atypical. The classic example used to illustrate this point relates to the fact that "Black Friday" conditions are not considered in analyzing the traffic impacts of a regional shopping center.

This case is different, though, as Friday happens every week, not just once a year. Also, because LAX is the dominant generator of traffic in the study area, it deserves special consideration. As noted in DEIR Table 4.12.1-2 (DEIR p. 4.12-11), LAX generated average daily traffic of 75,690 vehicles per day in the year 2014. Further, DEIR Table 4.12.2-4 (DEIR p. 4.12-61) shows that it generated over 12,300 AM peak hour trips, almost 16,100 midday peak hour trips, and 12,840 PM peak hour trips. It is unlikely that any other nearby land use generates such substantial traffic volumes.

Limiting the traffic impact analysis to the Tuesday through Thursday period is a guideline and not a requirement. Flexibility is accorded the lead agency in choosing the analysis periods. For consistency between the on-airport and off-airport traffic analyses, as well as to ensure a thorough analysis of potential traffic impacts, the analysis must address Friday "design day" conditions, as defined in the on-airport analysis.

<u>*Analysis Hours*</u>

The on-airport traffic analysis addressed the following peak hours (DEIR p. 4.12-18):

- Peak arrivals: 8:18 – 9:18 PM, and
- Peak departures: 6:16 – 7:16 AM.

The "peak arrivals" hour also represents the peak overall hour (i.e., arrivals and departures combined).

The off-airport analysis addressed the following time periods:

- AM peak hour: Highest hour between 7:00 and 10:00 AM,
- Midday peak hour (reduced study area): Highest hour between 11:00 AM and 2:00 PM, and
- PM peak hour: Highest hour between 3:00 and 6:00 PM.

The fact that the off-airport analysis addresses off-peak hours at LAX raises the distinct possibility that not all of the potentially significant impacts will be identified.

<u>*Travel Demand Forecasting Models*</u>

The on-airport traffic analysis for future year conditions was based, in part, on:

> *A vehicle trip generation and distribution model [that] was developed to estimate future traffic volumes on the Airport's roadway system based on future passenger activities.* (DEIR p. 4.12-3)

The off-airport traffic analysis apparently based its future year projections on a different travel demand forecasting model, as described below:

> *Utilizing TransCAD Version 7.0 modeling software, a detailed and updated travel demand forecasting model (updated City of Los Angeles Travel Demand Model) was developed for the Study Area using the Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP) 2012 Transportation Model (the most current regional model available at the time this Draft EIR was being prepared) and the calibrated and validated City of Los Angeles' Travel Demand Model as the base.* (DEIR p. 4.12-59)

No evidence is provided to indicate that any coordination occurred between the developers of the two models. Of particular interest is the question of what happens where the on-airport and off-airport study areas meet. Do the peak-hour traffic projections for the years 2024 and 2035 match? If not, why not? This information is needed to ensure that the traffic forecasts employed in both analyses are credible.

<u>*Summary*</u>

The lack of consistency between the on-airport and off-airport traffic analyses raises questions regarding the validity and credibility of the analyses, particularly with regard to the off-airport evaluation. The on-airport study is generally focused on historical design hours and days at LAX, based on extensive data collection at that facility. On the other hand, the off-airport analysis focuses on analysis procedures that, while considered "standard" in the traffic

engineering profession, do not necessarily fully address traffic operations at LAX. As demonstrated above, the approach employed in the off-airport analysis reflects levels of activity that fall far short of "peak" conditions (despite being labeled "peak hours") and, as a result, significant traffic impacts might be missed.

5. ***Inadequate Transit Analysis*** – The difficulties faced by individuals who desire to use public transit to access LAX are described at DEIR p. 1-2:

> *Moreover, LAX also lacks a direct connection to the Los Angeles County Metropolitan Transportation Authority (Metro) transit system. Currently, passengers and employees who want to take public transportation to LAX must either take a bus (often requiring a transfer from the LAX City Bus Center on W. 96th Street to the LAWA operated Lot C shuttle to reach the CTA), or take the Metro Green Line light rail to the station at Imperial Highway and Aviation Boulevard. They must then transfer to the LAWA-operated G shuttle to the Airport, which is a trip of approximately 2 miles.*

These constraints might lead one to believe that consideration of transit impacts and potential improvements to the transit system serving LAX would be important. The extremely limited, one-paragraph "analysis" of the proposed project's impacts on the regional transit system suggests otherwise. (DEIR p. 4.12-153) The analysis presented there states, in part:

> *Given that the Project consists of roadway and transportation improvements and construction of facilities that would facilitate movement of passengers at LAX . . ., the Project would not generate any additional new trips. . . . The proposed Project would improve connections to the regional transit system, which may encourage passengers and employees to utilize transit rather than other modes of traffic. Therefore, impacts to transit would be less than significant.*

First, we note the absolute lack of any analysis that might serve as a credible basis for a finding of a "less than significant" impact. We also find it ironic that the claim that the proposed Project "may encourage passengers and employees to utilize transit" is apparently used as the basis for determining that the transit impact will be less than significant.

The threshold of significance for transit is presented at DEIR p. 4.12-95:

> *. . . a significant impact is considered to occur if implementation of the proposed Project would result in a substantial increase in transit demand compared to the capacity of transit lines serving the project area.*

No information is provided with respect to current or project-related transit demand. Further, no data are presented to demonstrate whether adequate capacity exists (or will exist in the future) on the various transit lines that serve LAX. (Of course, this relieves the burden of having to determine what constitutes a "substantial" increase in transit demand.)

Finally, we note that Mitigation Measure "MM-ST (LAMP)-6. Transportation Demand Management (TDM) Program" (DEIR p. 4.12-179) specifically includes provision of transit passes to LAX employees. This feature of the TDM program can be expected to increase transit ridership, potentially impacting the transit lines serving LAX.

Under the circumstances, the absence of a meaningful analysis of existing and future transit capacity and the effect of the proposed project on that available capacity (if any) is a substantial deficiency in the DEIR. Further detail must be provided and incorporated into a revised DEIR.

6. ***Deficient Construction Traffic Analysis*** – The construction traffic analysis study area is substantially reduced from that addressed in the other traffic analyses. According to DEIR p. 4.12-194:

> *The construction traffic study area for this analysis includes those roads and intersections that would most likely be used by employee and truck traffic associated with construction of the proposed Project.*

In reality, though, the study area, as illustrated at DEIR Figure 4.12.3-1 (DEIR p. 4.12-195), barely extends beyond the boundaries of LAX. The apparent suggestion is that none of the construction traffic will travel east of La Cienega Boulevard, south of Imperial Highway or Interstate 105, or north of Westchester Parkway.

The analysis time periods are presented at DEIR p. 4.12-209. The AM peak hour is defined as 7:00 - 8:00 AM, while the PM peak hour is described as 4:00 - 5:00 PM. For both peak-hour periods:

> *The construction traffic analysis assumed that no employee trips would be on the roadways at this time. . . . This approach provides a conservative impact analysis by addressing situations when complete avoidance of the morning [or evening] commuter peak period is not possible.*

It is not at all clear how ignoring the traffic associated with 966 construction employees constitutes a "conservative" analysis. (DEIR, p. 4.12-213) In fact, referring to DEIR Table 4.12.3-4 (DEIR p. 4.12-215), we see that the assumed analysis hours just miss having to assess the impacts of over 520 employee-generated trips. For clarity, we have replicated a portion of that table below, as Table 2.

In the morning, the DEIR indicates that 523 employee vehicles will arrive between 6:00 and 7:00 AM, along with a total of 162 truck trips, for a total traffic volume of 685 trips. But the analysis addresses the following hour (7:00 – 8:00 AM), when no employees are assumed to arrive and the total traffic volume is only 162 trips, about one-quarter as many as between 6:00 and 7:00 AM. It is also interesting to note that, although they are specifically listed on the table, no "employee shuttle" trips are assumed.

In the evening, the analysis addressed the hour between 4:00 and 5:00 PM (i.e., 16:00 – 17:00) when only truck traffic is assumed to occur (162 trips). If the previous hour had been considered, the traffic total would be 685 trips, including 523 departing employees and 162 truck trips (81 in and 81 out). Again, no employee shuttle trips are shown in any hour.

The employee trip values in Table 2 are based largely on a number of assumptions regarding how construction workers will be scheduled. Given the uncertainties inherent in developing such assumptions, we believe that a truly conservative analysis would only result from evaluation of the adjacent hours, which have higher estimated construction employee traffic volumes.

Further, we note that the same deficiencies described here also afflict the construction traffic analysis for cumulative conditions, which is documented at DEIR pp. 4.12-219 – 4.12-229.

Table 2
Proposed Project-Related Construction Traffic PCEs[1,2]

Hour	Employee Trips In	Employee Trips Out	Truck Trips In	Truck Trips Out	Employee Shuttle Trips In	Employee Shuttle Trips Out	Total Construction PCEs
6:00 – 7:00	523	--	81	81	--	--	685
7:00 – 8:00[3]	**--**	**--**	**81**	**81**	**--**	**--**	**162**
8:00 – 9:00	57	--	81	81	--	--	219
14:00 – 15:00	154	--	81	81	--	--	316
15:00 – 16:00	--	523	81	81	--	--	685
16:00 – 17:00[3]	**--**	**--**	**81**	**81**	**--**	**--**	**162**

Notes:
1 Source: DEIR, Table 4.12.3-4 – Project Peak (January 2020) – Proposed Project-Related Construction Traffic PCEs, p. 4.12-215.
2 PCE = Passenger Car Equivalent (Reflects conversion of truck numbers to indicate an equivalent number of passenger cars, based on operational considerations.)
3 Analysis hours assumed for DEIR construction traffic analysis are shown in **bold** font and highlighted in yellow.

The non-conservative nature of the construction traffic analysis is further revealed through examination of the tables providing the intersection level of service results. DEIR Table 4.12.3-7 summarizes these results for the peak construction period (January 2020). According to that table, of the 58 calculations presented (i.e., 29 intersections analyzed for the AM and PM peak hours), 44 (76 percent) indicated no change in volume/capacity (V/C) ratio due to construction traffic, with the calculations carried out to three decimal places. In other words, no construction-related traffic was added to those intersections. A significant impact was found at only one intersection – Aviation Boulevard/Century Boulevard.

The cumulative conditions analysis (November 2019), as documented in DEIR Table 4.12.3-8 (DEIR p. 4.12-235) had one additional calculation for which the V/C ratio increased by 0.000. In other words, 45 of the 78 calculations listed on that table showed no increase in V/C, which indicates that no construction traffic was added to the intersection. (The traffic volumes for the construction traffic analysis are not presented in the DEIR, so it is impossible to confirm this.) In this case, three intersections were found to have significant impacts – Aviation Boulevard/ Century Boulevard, Imperial Highway/Aviation Boulevard, and Imperial Highway/I-105 Ramp.

Analyses were conducted for the significantly impacted intersections to determine the effects of implementing recommended mitigation measures. Not surprisingly, perhaps, those analyses concluded that the proposed measures would fully mitigate the construction impacts. That is, the change in V/C ratio after mitigation would be 0.000. It is not clear exactly how that is to be accomplished, given the list of mitigation measures (e.g., formation of a Project Task Force, development of Worksite Traffic Control Plans, etc.), which would generally have little or no effect on construction traffic volumes.

Since the only construction traffic that was considered in the analysis is truck traffic, it would seem reasonable to expect that the mitigation measure outlining designated truck routes might be

effective, but the roads listed there include those having significant impacts – Aviation Boulevard, Century Boulevard, Imperial Highway, and I-105. Another proposed measure calls for establishing designated truck delivery hours, but the description of that measure is so full of loopholes (in particular, repeated use of the phrase "to the extent possible") that it might have no effect whatsoever.

These results are simply not credible. The construction traffic analysis must be revised to reflect more conservative, more realistic consideration of the potential effects associated with almost 1,000 construction workers and the trucks necessary to carry out the proposed project. As illustrated in Table 2 above, it is difficult to avoid the conclusion that the construction traffic analysis hours were arbitrarily selected to avoid impacts. Additional detail is also needed with respect to the specific beneficial effects of the proposed mitigation measures.

Further consideration is also required with respect to the lane closures and other forms of traffic blockage that will occur for extended periods over the course of the construction process. The construction-related thresholds of significance include the following (DEIR pp. 4.12-230 – 4.12-231):

- *Result in temporary lane, alley, or street closures within a major or secondary highway right-of-way for more than one day.*
- *Result in the loss of regular vehicular or pedestrian access to Airport, commercial, or industrial facilities for more than one day.*
- *Result in the temporary loss for more than one day of an existing bus stop or rerouting of a bus route.*

DEIR p. 4.12-237 acknowledges that:

> *Construction of the proposed Project could result in the closure of one or more lanes of a major off-Airport traffic carrying street for an extended length of time. . . . The proposed Project would also require the re-routing of buses, the relocation of the LAX City Bus Center, and the relocation of bus stops.*

Although this is identified as a significant impact, no quantitative analysis is provided to indicate the true magnitude of the issue. In particular, where is this expected to occur? At locations where extended lane closures are anticipated, what will be the resulting vehicular delay and level of service in the AM and PM peak hours? Will there be additional safety impacts and crashes associated with the lane closures? What will be the effect on transit travel times? When bus stops are relocated, what will be the extent of the increase in walk access distance and time for transit passengers? Will it be sufficient to discourage transit usage?

In summary, the analysis of construction traffic impacts is deficient. The analysis appears to have been skewed to ensure that no impacts would occur, despite the arrival and departure of almost 1,000 construction workers in 523 vehicles/hour every day. In addition, more detail is necessary regarding the effects of lane closures that will occur over an extended period.

7. ***Deficient Transportation Demand Management Program*** – A key element of the proposed package of mitigation measures is the implementation of a Transportation Demand Management (TDM) Program (MM-ST (LAMP)-6, DEIR p. 4.12-179 – 4.12-180). This measure calls for the conduct of travel surveys and the formation of a Transportation Management Organization

(TMO), which will then offer various vaguely-defined "amenities/opportunities" to LAX-area employees.

The goal of this mitigation measure is to "[a]chieve a 5 percent trip reduction performance objective," which is further defined as:

- *Elimination of 200 peak hour trips (am or pm) identified as "drive alone" employee trips.*
- *Elimination of 800 average daily one-way trips identified as "drive alone" employee trips.*

It is unclear how the effectiveness of the TDM program will be measured, although perhaps the surveys referred to above might be helpful. More importantly, what happens if the performance objective is not met and the necessary trip reduction does not occur? By the time this failure becomes apparent, surrounding jurisdictions that will be inundated with LAX-generated traffic will have no recourse.

The proposed TDM program must be described in greater detail, and credible evidence of the specific beneficial effects of the various components of the program must be presented. As currently delineated, the value of the TDM program in effectively mitigating the impacts of the proposed project is questionable.

8. ***Failure to Address Freeway Access Deficiencies*** – As currently configured, the freeway access system serving LAX imposes an undue burden on the City of El Segundo. In particular, travelers approaching LAX on northbound I-405 tend to exit the freeway at westbound I-105, rather than continuing to Century Boulevard, where chronic traffic congestion causes delays, inconvenience, and frayed nerves. Unfortunately, the exit ramp from northbound I-405 to westbound I-105 overshoots Aviation Boulevard, so that these travelers are forced to use Nash Street, Maple Avenue, and Sepulveda Boulevard within El Segundo to reach the CTA.

   As passenger traffic at LAX increases, this situation will be exacerbated. The DEIR needs to address the potential for improved access from northbound I-405, particularly with respect to modifications to the northbound-to-westbound ramp between I-405 and I-105 that would allow drivers to exit from that ramp to Aviation Boulevard.

9. ***Nonexistent Project Access Analysis*** – The project proposes three major facilities that will each incorporate substantial parking structures, including a total of 24,300 parking spaces:

   - Intermodal Transportation Facility (West) – 8,000 parking spaces,
   - Intermodal Transportation Facility (East) – 8,300 parking spaces, and
   - Consolidated Rental Car Facility – 8,000 parking spaces.

   The DEIR presents no analysis to evaluate the access systems at these facilities, however. Such an analysis would address whether vehicles will be able to enter the facilities without queuing back onto the public street, thereby creating congestion and potential safety hazards. If left turns are required to enter the garages, can they be made safely? Also, will exiting drivers be able to do so safely, without creating hazards for themselves or passing motorists? Will either entering or exiting vehicles be subject to excessive idling, which would affect air quality and greenhouse gas emissions?

10. ***Mitigation Measures*** – In addition to the questions presented above regarding the TDM mitigation measure, we have identified a number of additional questions concerning the mitigation measures presented in the DEIR Transportation/Traffic section, as follows:

    - *MM-ST (LAMP)-7. Signal System Corridor Improvements – Intelligent Transportation System (ITS), City of Inglewood*: This measure includes a "monetary contribution" toward certain improvements, but does not specify the magnitude of the contribution. Will the proposed project fully fund the needed system upgrades or only pay a "fair share"?

      Also, three of the intersections listed in this measure are also addressed in other mitigation measures, specifically:

      - MM-ST (LAMP)-13. La Cienega Boulevard and Florence Avenue
      - MM-ST (LAMP)-14. Inglewood Avenue and Century Boulevard
      - MM-ST (LAMP)-16. La Cienega Boulevard and Manchester Boulevard

      What is the difference between MM-ST (LAMP)-7 and these other three measures?

    - *MM-ST (LAMP)-8. Signal System Corridor Improvements – Closed Circuit TV (CCTV) Camera and Changeable Message Signs (CMS) Installation*: This measure states that the proposed project, ". . . will provide funding towards implementation of Changeable Message Signs (CMS) along key access corridors to LAX such as Sepulveda Boulevard, La Cienega Boulevard and Century Boulevard."

      The measure does not state how much funding will be provided and is unclear as to whether the specific corridors listed are the only ones where CMS will be installed or if these are only examples of where this might occur. In short, additional specificity is required to allow a meaningful assessment of the beneficial effect of the measure.

    - *DEIR Section 4.12.2.9.3 Roadway Corridor Improvements* lists three significant roadway system improvements. However, these improvements are not designated as mitigation measures (i.e., they have no "MM-ST (LAMP)" number; those numbers skip over these three improvements). Consequently, it is not clear whether the proposed project will actually be required to implement these improvements.

    - *MM-ST (LAMP)-11. Modify the Intersection of La Cienega Boulevard and Arbor Vitae Street*: This measure says that the proposed project will add a second eastbound left turn lane and "contribute to design and implementation of signal system improvement," which will "increase intersection capacity by 10 percent."

      The amount of the contribution toward the signal improvements is unclear. Will the proposed project pay the entire cost or some lesser "fair share"? Further, the specific nature of the signal system improvement is not stated and the conclusion regarding its impact on intersection capacity is unsubstantiated.

    - The indirect impacts of implementing the proposed mitigation measures are not adequately addressed. This is briefly addressed at DEIR pp. 4.12-185 – 4.12-186, but that limited discussion revolves around the following statement:

      > *The environmental impacts associated with the proposed improvements to the off-Airport transportation system would depend on the specific nature, location, and extent of such improvements.*

The "specific nature, location, and extent" of the mitigation measures have presumably been set forth in the paragraphs preceding this statement and are, therefore, known. As such, a meaningful evaluation of the indirect impacts of implementing the measures should be possible. None is provided, however.

11. ***Potential Future Development*** – The DEIR addresses, at a program level, an analysis scenario referred to as "2035 Future With Project and Potential Future Related Development." (DEIR pp. 4.12-153 - 4.12-165) This scenario includes the traffic associated with 900,000 square feet of commercial development in addition to the 2035 Future With Project scenario. No information is presented to describe the specific land use assumptions or the volume of traffic associated with the potential future related development. Clearly, assumptions of this type have been made, as the DEIR presents detailed intersection V/C and LOS results for this analysis scenario. Absent this basic information about the potential future related development, it is impossible to judge the validity of the analysis results for this scenario.

CONCLUSION

Our review of the "Transportation/Traffic" section of the Draft Environmental Impact Report for the LAX Landside Access Modernization Program in Los Angeles, California revealed several substantial issues the affecting validity of the conclusions presented in that document. A modified traffic impact analysis must be prepared, and that updated analysis should be incorporated into a revised environmental document.

We hope this information is useful. If you have questions concerning anything presented here, please feel free to contact me at (916) 783-3838.

Sincerely,

MRO ENGINEERS, INC.

Neal K. Liddicoat, P.E.

Other Comments:	Hello thanks for working on the people mover idea. I support a people mover, and think it is generally a better idea than a train. I do wish the process of building it could be sped up. Maybe it could be built in sections somehow so it could start to transport people to the airport area, and the second phase could take people all the way. I think this is an important project we should hurry up on. I also think the people mover itself should be built first and everything else around it can be added later as its most important to get it up and running as quickly and safely as possible. Much thanks Eric Sievering

Subject: Updating LAX

I urge these for LAX:

Backup power for People Mover system

Have mini HyperLoop for Mover & connect to MTA??

System must counter hacking of trains.

need backup shuttle buses should People Mover breakdown???

Need backup cars for People Mover IF warranted.

EZ ramps On OFF to People Mover.

Larger moving walkways to PeopleMover & to rental Car center.

Need Food Court at People Mover depot away from Terminals.

Need Fuel cells for aux power for whole LAX area.

Food Court near Rental Car Center.

expand US Customs for guests from Tom Bradley Term to People Mover.

Display Project at all Terminals.

Have LAX model in Mayors Office visible for media etc.

Update LAX CCTV alone & Security systems.

Re organize TSA Area for screening.

Link People Movers to Airline Lounges IE British Airways & American Airlines etc.

More can be done.

Past LAX Guest.

Other Comments:	I wish to comment on the LAX Landside Access Modernization Program. Regarding the indicated route of the Automated People Mover, I would reroute the track within the airport from an out-and-back-down-the-center plan to a loop around the perimeter of the roadway with a station at each terminal. This would greatly minimize the walking distance from APM station to eventual airline gate. This would also allow the APM to act as an inter-terminal transportation option.

LAX Landside Access Modernization Program

Los Angeles World Airports

LAX

RELEASE OF DRAFT ENVIRONMENTAL IMPACT REPORT & PUBLIC WORKSHOP ANNOUNCEMENT

PROJECT DESCRIPTION

LAWA is proposing to implement the LAX Landside Access Modernization Program ("Project") to improve the LAX passenger experience, relieve congestion, and enhance LAX's status as world-class airport.

The LAMP Project will provide new and convenient transportation options outside the Central Terminal Area (CTA), including dedicated areas for passenger pick-up/drop-off and parking facilities with direct access to the CTA, car rental opportunities located in one centralized location near freeway, and convenient access to the Metro regional rail and bus transit system. At the centerpiece of the Project is the Automated People Mover (APM) system, which would connect passengers to the airline terminals and the LAMP Project's new facilities.

COMPONENTS OF LAX LAMP PROJECT

- Automated People Mover (APM)
  The APM System would be an above-ground airport transport system connecting terminal facilities, a new centralized rental car facility, pick-up and drop off facilities with airport parking, and a convenient connection to Metro's regional transit system. The APM would allow for a direct and seamless connection to Metro's proposed Airport Metro Connector (AMC) 96th Street Station.
- Consolidated Rental Car Facility (CONRAC)
  CONRAC is designed to accommodate rental car agencies in one centralized location near the 405 freeway.
- Intermodal Transportation Facilities (ITFs)
  Intermodal Transportation Facilities would offer new pick-up and drop-off, connections to shuttles and transit, parking, and direct access to the CTA via the APM system.
- Roadway Improvements, Including Improved Freeway Access to LAX
  Proposed roadway improvements are designed to facilitate efficient access to new airport facilities outside the CTA and to reduce congestion and vehicle emissions.

GOALS OF THE LAMP PROJECT

- Enhance the passenger experience by providing new access options, including a direct connection to Metro regional rail and bus transit
- Provide easier and more efficient access to rental cars
- Relieve congestion in the CTA and on the surrounding street system
- Promote the sustainability of LAX by improving the efficiency and operation of the surface transportation system in which LAX operates
- Enhance and integrate the overall design of LAX facilities both inside and outside the CTA
- Maintain airport operations during the construction

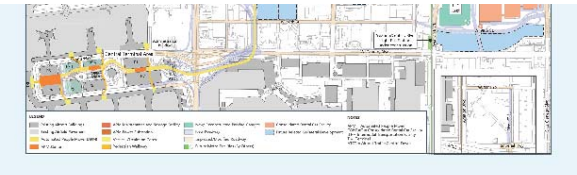
SEEKING YOUR INPUT

LAWA released the EIR on Thursday, September 15, 2016 and will seek your input at two public workshops in October. LAWA invites you to make your voice heard by submitting comments at our workshops or via any of our contact tools by Monday, October 31, 2016.

Saturday, October 15, 2016; 9:30AM to 12:30PM
Presentations at 10:30 AM and 11:30 AM
Senior Center at Westchester Recreation Center
7000 W. Manchester Ave., Los Angeles, CA 90045

Wednesday, October 19, 2016; 6:00PM to 8:30PM
Presentations at 6:45 PM and 7:30 PM
Flight Path Learning Center Museum
5661 W. Imperial Hwy., Los Angeles, CA 90045

Throughout the environmental review process, there will be multiple opportunities to attend meetings and provide public comment on the Project.



CONTACT US

If you are unable to attend the upcoming public workshops for the DEIR, you can provide your feedback, contact LAWA or access project information via any of the following information sources:

Other Comments:	While I realize this is still in the conceptual stage, my comments center around Section 2.3 and 2.6. Specifically in Section 2.3, I believe that not enough emphasis is given to the historic nature of the Theme Building. While it is not a NPS Registered Landmark, it very much defines the airport and would be subject to DOT Part 4f and Section 106 considerations. As such, any obstruction of the structure would constitute an adverse effect to its sense of place should elevated APM structures be placed in close proximity to the building. I would strongly urge that alternative locations be sought for the APM as to not infringe upon sitelines which may impact the Theme Building and its eventual place on the NPS Registry. Second, as a frequent user of the airport, I strongly urge reconsideration of the proposed image on page 1-3 and design considerations Section 2.6 the APM. The single track with three stations to serve all the terminals is non-condusive to travelers attempting to reach the CONRAC or ITF due to the lengthy transition between terminal and station. The loss of time and unrealistic proximity of the station to T3-T4-TB, and especially the location of proposed pedestrian walkway located between T4-T5 is ill advised. This location is inconvenient and excessive to passengers at both terminals. In addition, the transition from Arrivals to the pedestrian bridge are

	not addressed or articulated in Section 2.6.3. These deficiencies should be addressed and considered. A entire loop APM with third floor access to trains would be preferable for low-impact construction and ability to have smaller stations at each terminal or shared between terminals, ie T1-T2, T3-TB, TB-T4, T6-T6. I am very impressed with all architectural design elements as well as the integration of streetscapes. On a final note, I believe it would be good governance to disclose the use of Ricondo and Associates as consultants since the package clearly has their identity on it, yet does not disclose their involvement.

GATEWAY Los Angeles AIRPORT BUSINESS DISTRICT

September 23, 2016

Los Angeles World Airports (LAWA)
Attention: Ms. Evelyn Quintanilla
Chief of Airport Planning
P.O. Box 92216
Los Angeles CA 90009-2216

Dear Ms. Quintanilla:

On behalf of Gateway to L.A., a property-based business improvement district, serving area property owners and stakeholders since 1998, we are requesting that LAWA **extend** its 45-day comment period related to the Draft EIR for the LAX Landside Access Modernization Program ("LAMP").

The Draft EIR and its Appendices are 16,504 pages in length. If we were to read every day for 45 days, it would mean reviewing 366 pages or more a day, just to complete the review within this minimal time frame.

A 45-day public review period is an inadequate length of time for a document of this importance which will define the physical and aerial landscape of the landside area, where our members own properties and operate businesses, for our lifetimes and beyond.

Please extend the public review period for an **additional 45 days, to December 16, 2016**.

Very truly yours,

Laurie Hughes
Executive Director
Gateway to L.A. PBID

c: Deborah Flint, CEO – LAWA
Grant Coonley, President – Gateway to L.A. PBID

Other Comments:	Please be sure to consider trash receptacles in all planning. Currently there are NO trash cans in the parking lot at the Aviation Imperial rail station and the lot is filthy. Anywhere where there will be an increase of people means an increase of trash. The surrounding areas, streets, all suffer with no trash receptacles and no pick up. Thank you for keeping our cities clean and attractive for everyone as you go forward to bring more accessibility to this area.

Project Name:	LAMP DEIR
Other Comments:	Thank you for your mailer I plan to look into this DEIR. If it does not include a walkway through the Sepulveda tunnel it is not human friendly and therefore not a modernization program at all. I envision a glass tube that is environmentally safe to allow humans to walk through from 1 side to the other. It is bad enough that people are heavily restricted in where they may go in or around the airport. Please consider these seriously. We are not waiting for another 50 years to claim another modernization program that is not human friendly. Even if you restrict them, as you have all this time, I still see them walk through. I have heard of some deaths occuring right there and if you continue to ignore it your jobs are all in vain. I dont even want to imagine how gruesome they are.

Other Comments:	I urge you to consider environment in the broadest sense including socio-economic-environment. While I empathize with the homeless, the solution is not a pop up informal, tent-mobile home sub neighborhood. Please speed up acquisition of the scattered apartments where citizens must live in the midst on construction and people apparently in transit and some that seem to be on drugs and decreasing neighborhood security. In addition, other methods should be considered to enforce some kind of registration -- even if it is a low cost parking permit so we know who is occupying the space. I live at 5325 W. 93rd street and I am very concerned about the human environment as well as possible disturbances of asbestos.

Other Comments:	Aviation, between Century and Imperial is an utter disgrace and reflects the inattention to the neighboring community. The roadway is in disrepair. There is no sidewalk for the pedestrians and workers whom traverse it on foot. And there is no lighting. This is a safety and security issue that reflects poorly on the executive management of LAX. Further, visitors from near and far obtain a seriously negative view of what should be a proud gateway to Southern California. The executive management of LAX needs to implement and execute an immediate plan to upgrade the entire community infrastructure around LAX, an area of which it owns many structures and is the most powerful entity in the area. If I lived around LAX, I would have utter contempt for the lack of professionalism exhibited from top, middle and bottom management.

Los Angeles World Airports (LAWA)
Attention: Ms. Evelyn Quintanilla
Chief of Airport Planning
P.O. Box 92216
Los Angeles CA 90009-2216

Dear Ms. Quintanilla:

As you may know, TPS Parking Management, LLC d/b/a The Parking Spot operates two established facilities located near LAX providing off-airport parking and complimentary shuttle services to and from the airport.

As you know, the Draft EIR and its Appendices for the LAX Landside Access Modernization Program ("LAMP") are over 16,000 pages in length. LAMP not only has a significant impact on LAX but all surrounding local businesses, like The Parking Spot, that provide a valuable service to the traveling public. We want to be sure that we have enough time to adequately review the Draft EIR and understand what implications the conclusions set forth therein will have on our daily operations today and for the foreseeable future.

A 45-day public review period is simply not enough time to provide the in-depth review that a document of this magnitude and importance should be afforded.

As such, we respectfully request that LAWA please extend the public review period for the Draft EIR at least an **additional 45 days, to December 16, 2016**.

Very truly yours,

Kevin Shrier
Chief Executive Officer
TPS Parking Management, LLC

Evelyn Quintanilla
Chief of Airport Planning
Los Angeles World Airports
P.O Box 92216, Los Angeles, CA 90009-2216

Ms. Quintanilla,

The Neighborhood Council of Westchester Playa (NCWP) represents the Los Angeles communities of Westchester, Playa del Rey and Playa Vista. We write to register our comments regarding the Draft Environmental Impact Report (DEIR) for the Landside Access Modernization Projects (LAMP) at Los Angeles International Airport (LAX). Thank you for the opportunity to comment on the DEIR.

The NCWP recognizes that LAX is a vital economic engine in Los Angeles and Southern California. We also recognize that it is in great need of improvement and modernization to enhance how passengers experience LAX and perceive our city and region. We have several concerns regarding the DEIR for the LAMP.

- The NCWP requests that the public be granted more time than the required minimum comment period of forty-five (45) days. The LAMP is a very significant basket of projects with enormous impacts for the future of LAX and our community as a whole. Forty-five days is insufficient time for the public to review and comment on these projects that have been years in planning. NCWP requests that the comment period be extended an additional 45 days for a total of 90 days.
- The traffic analysis is flawed and underestimates both traffic volume and the negative impacts on the community. The analysis optimistically relies on "pricing strategies" to divert congestion and offers programs such as the LAX TDM/TMA that have no measure of success. These programs must have performance metrics included in order to determine the traffic reduction forecasts.
- The traffic study assumptions/forecasts for 2024 need to be verified after Phase 1 has been in operation for one year. Any inconsistencies with this current EIR Transportation Model forecast must be rectified prior to any Phase 2 approvals.
- The study includes "Fair Share" mitigation solutions to impacts created on the area freeways however funding for construction of these projects is not identified. This project assumes and enables significant passenger growth that will consequently have significant traffic impacts that are effectively not mitigated.

- A regional, all-inclusive transportation plan, including freeway improvements, intersection improvements and mass transit additions, is needed to insure transportation success of this project. If one area is not addressed/implemented the entire proposed solution to decrease congestion is jeopardized. Funding mandates from LAWA, various cities and state agencies, including Cal Trans, must be required.
- It is unclear if the traffic study has included the anticipated impacts that may result from the Los Angeles Mobility Plan for Playa del Rey - Culver Blvd Street Standards. This recently adopted plan must be considered and traffic study reevaluated.
- Imperial Highway and Aviation Blvd will serve as a primary construction haul routes for this, as well as other projects that are taking place at LAX. Funding needs to be identified to properly improve and maintain these important roadways during and after construction is complete.
- The six years of neighborhood impacts by the reduction of CTA passenger parking during construction will increase parking and ride-sharing pick-ups have not been addressed.
- The assumptions related to the numbers of projected passenger counts and total operations in 2035 are inconsistent with historical trends. The forecast for 2035 has Million Annual Passengers (MAP) at 96 to total operations (in 000's) at 850, which is a ratio of .113. The ratio in 2015 was .127 and you have to go back to 2010/2011 to find a ratio of .113. This may indicate that the MAP is understated by more than 12%.
- LAWA must develop a robust communications plan for the next 10 years that incorporates social media, email, outreach and print, to keep the area stakeholders apprised of construction impacts (noise, late night work, road closures, haul route activity).
- While construction haul routes have been identified, no mention is made of the commuter routes for all other construction related traffic. All construction related traffic routes must be specified.
- This DEIR is silent on this matter but it deserves to be noted. This project must at no time result in new streets or driveways that facilitate access to LAX from the north. This project must in no way result in added traffic or encourage "cut-through" traffic in the surrounding residential neighborhoods.
- The anticipated growth that is facilitated by this project will impact the community of Westchester in the business district on Sepulveda. Many LAX passengers can be seen walking to and from LAX and Westchester on Sepulveda Blvd. The anticipated increase warrants a "Pedestrian Plan" for Sepulveda Blvd. Improvements to the street landscaping, lighting, sidewalks and crosswalks are needed to make this area safer for the visiting LAX passengers.

- The Consolidated Rental Car Facility (ConRac) will be built in the areas known as Belford and Manchester Square. The DEIR indicates that there are 80 homeless individuals who live in the area as per the 2015 LAHSA homeless count. This number may have been correct at that time but grossly understates the current condition of the area. A current unofficial count indicates that the homeless population is more than twice that at roughly, at least 200. Other than underestimating the number of people directly impacted, the DEIR is silent on this enormous social impact on the area. The DEIR concludes that there is not a "substantial number of people" being displaced and that the impacts will be "less than significant". The NCWP strongly disagrees with these conclusions. There are a "substantial" number of people who are being impacted by this project and this should require that LAWA participate financially in the construction of transitional and replacement housing.

We reiterate the need for additional time for a thorough review of the enormous document that is this DEIR. Thank you for the opportunity to comment on this important and much needed project.

Sincerely,

/s/Cyndi Hench

Other Comments:	I think it is "Back to the Drawing Board" for your LAMP APM project. I assume you are well aware of all of the other mayor projects being planned for LAX. However, your CTA APM stations and pedestrian walkways do not seem to take other projects into consideration. In particular, your CTA APM stations and pedestrian walkway locations, at least for Terminals 1, 2, and 3, bear little resemblance to what is required to feed these three terminals. Specifically: The West CTA APM station and pedestrian walkways do not serve the proposed Midfield Concourse which whose DEIR shows an underground APM station nor do they connect with the proposed Terminal 3.5 ticketing area near the TBIT. Your LAMP DIER does not even address access for the proposed Midfield Concourse. The Center CTA APM station and pedestrian walkways do not directly connect with the proposed Terminal 2.5 ticketing area between Terminals 1 and 2. The LAMP DEIR shows a pedestrian passage between the Center CTA APM station and the south-east corner of Terminal 2 and no direct connection to Terminal 3. For the East CTA APM station, your LAMP DEIR shows a pedestrian passage connected to the south-east corner of Terminal 1 and no connection to proposed Terminal 1.5. In fact, this APM station appears to serve only Terminals 7 and 8. Overall. I truly

	wonder if somehow the right hand does not know what the left hand is doing. There really needs to be a meeting among the "powers that be" to resolve these inconsistencies before anything is locked in concrete.

Re: Comment Letter - Landside Access Modernization Program ("LAMP") EIR

Dear Los Angeles World Airports – Board of Airport Commissioners:

We are submitting this comment letter to Los Angeles World Airports ("LAWA") regarding the above-referenced Draft Environmental Impact Report ("DEIR") for the Landside Access Modernization Program ("LAMP").

Our property, Four Points by Sheraton LAX is located in the "Landside" area, at 9750 Airport Blvd. Los Angeles, CA 90045.

We have concerns about and provide comments on these issues:

Shuttle Issues:
We currently operate a shuttle into the Central Terminal Area ("CTA") to serve our customers and guests. Under the EIR with the implementation of "LAMP," it appears that we will no longer be allowed to pick up and drop off in the CTA, but instead will be limited to the Intermodal Transportation Facility West ("ITF West").

If the goal under LAMP implementation is to restrict vehicles within the CTA to reduce traffic congestion, it seems contrary to common sense that our shuttle buses - which hold scores of passengers - would be restricted from CTA access, while private cars, taxis, Lyft, Uber, limousines, which often carry only one or two passengers, would still be allowed access to the CTA.

FOURPOINTS.COM/

FOUR POINTS BY SHERATON

Our comment and request is that LAWA reconsider this restriction to our shuttle access to the CTA under the LAMP implementation. Our shuttles are "aggregators" of passengers, whereas taxis, Lyft, Uber and limousines typically transport only one or two passengers per trip.

In the EIR's Table 17 of Appendix O of the Off-Airport Traffic Study, the table contains vehicle occupancy numbers during peak travel times that appear to be too low. Our shuttles are quite full during peak travel periods, despite what Table 17 reflects. Our comment and request is that LAWA re-examine these vehicle occupancy assumptions for shuttles during peak periods, and clarify or correct Table 17, which appears to be flawed.

The EIR indicates that private shuttles must *only* use the ITF West. Our comment and request is that private shuttles be allowed access to both of the ITFs, as well as to the CTA. If the goal is to reduce traffic congestion, then if one facility is full or congested, the shuttle buses should be allowed the flexibility of dropping off and picking up at any of these facilities.

Very truly yours,

Re: Comment Letter in response to LAWA's Draft "LAMP" EIR

Dear Los Angeles World Airports – Board of Airport Commissioners:

On behalf of Hyatt Regency Los Angeles International Airport and Quik Park Parking Garage, we are submitting the following comment letter to Los Angeles World Airports ("LAWA") regarding the above-referenced Draft Environmental Impact Report ("DEIR") for the Landside Access Modernization Program ("LAMP").

1. The DEIR indicates in the Appendix O Report that **shuttle access** to the Central Terminal Area ("CTA") will be restricted (eliminated) for some classes of commercial operators, to encourage pick-up and drop-off at the ITF West, and to reduce congestion in the CTA. Appendix O Report reads: "*LAWA would restrict access to the CTA for some classes of commercial operators such as shared ride vans, scheduled service buses, courtesy shuttles, and pre-arranged charter carriers. LAWA* ***may*** *also institute pricing differential strategies to encourage other commercial vehicle operators such as taxis, limousines and … Uber and Lyft .. to pick up and drop off passengers at the ITF West. ….. Approximately 16 percent of all airport traffic would utilize the ITF West, which is assumed to consist of charter vans, taxis, limos and paid rides,* ***parking patrons, hotel shuttles****, and private vehicle pick ups and drop offs*."

   We are concerned about the impacts to our businesses, which currently have shuttle buses which are allowed to pick up and drop off passengers in the CTA area.

   If the goal under LAMP implementation is to restrict vehicles within the CTA to reduce traffic congestion, it seems counter-intuitive that per the DEIR, shuttle buses which hold scores of passengers, including the hotel shuttles and off-airport parking shuttles, would be restricted under any circumstances from CTA access, while private cars, taxis, Lyft, Uber, limousines – which often carry only one or two passengers – would still be allowed access to the CTA. **We request that LAWA reconsider this restriction on hotel and off-airport parking shuttles accessing the CTA under the LAMP implementation.** Hotel shuttles and off-airport parking shuttles are "aggregators" of passengers, whereas taxis, Lyft, Uber and limousines typically transport only one or two passengers per trip.

Further, in the DEIR's Table 17 of Appendix O of the Off-Airport Traffic Study, the table contains vehicle occupancy numbers that appear to be too low for some modes of transportation. Table 17 shows that "Vehicle Occupancy" for "Private Parking Shuttles is only 1.9 passengers on Arrival Level 1, and only 3.4 passengers on Departure Level 2. Similarly, Table 17 shows "Vehicle Occupancy" for "Hotel Shuttles" is only 3.5 passengers on Arrival Level 1 and only 3.9 passengers for Departure Level 2. These Vehicle Occupancy numbers, per Table 17's notes, reflect that these passenger numbers/vehicle occupancy numbers are during "**arrivals peak period**" and "**departures peak period**." The reality is that both Private Parking Shuttles and Hotel Shuttles operate close to full and sometimes standing room only, during peak periods. **We request** that LAWA re-examine these vehicle occupancy assumptions for Private Parking Shuttles and for Hotel Shuttles during peak periods, and clarify or correct Table 17.

An alternative, which we request is for LAWA to analyze prior to circulation of the FEIR, to continue to allow **curbside access in the CTA** to commercial vehicles carrying more passengers, while restricting private vehicles, taxis, Lyft, Uber and limousines to dropping off and picking up passengers on the first level of each CTA parking structure **for a fee**, or alternatively those private vehicles, taxis, Lyft, Uber.

2. The DEIR contained little discussion regarding a **possible pedestrian bridge over Sepulveda Boulevard** that would link Century Boulevard properties, businesses and their patrons to the CTA. The only discussion was in the FEIR was that "LAWA would preserve a pedestrian connection between the CTA and W. Century Boulevard as part of the proposed Project, through **either** an at-grade crossing or future pedestrian bridge." A pedestrian bridge linking Century Boulevard across Sepulveda and ultimately to the CTA would provide much **greater safety to pedestrians** than an at-grade pedestrian crossing, and is a priority to us and other owners and businesses who serve the airport. **We request** that the FEIR reflect further analysis including a conceptual pedestrian bridge plan in the FEIR.

We look forward to the above issues raised to LAWA to be addressed in the FEIR in much greater detail, and where appropriate for additional mitigation measures to be recommended.

Very warm regards,

Jeff Rostek
Managing Director
Hyatt Regency Los Angeles International Airport

581	Maria Tong	mmtong2000 @yahoo.com	713 Redwood Ave	El Segundo	CA	90245	LAMP DEIR	Dear Evelyn and Committee Members: It is good to know there is a program [Landside Access Modernization Program] looking into the traffic congestion around the LAX area, where the drop-offs and pick-ups of travelers have already increased, along with the air traffic itself. There are a few suggestions I would like to submit to the Committee in response, from the voice of a local El Segundo resident. Not to have those heavy engine aircraft [747 or equivalents, and Air Cargo] fly over the top of residential houses after 10 pm. Even though we have double glass windows or doors, when those heavy engine aircraft take off at a LOW altitude and fly over the top of our house, that noise can wake you up in the middle of the night, and the vibration that occurs makes the structure of the house creak. This creaking noise can also wake you up and causes me to be concerned about damage in the long run. These aircraft take-offs are really too low. Those heavy engine aircraft always fly LOW altitude when they fly over the El Segundo residential houses before heading towards the ocean. The distance is almost under one mile from my house. The heavy engine noise might well be over the limit of human hearing protection. One cannot even work in the yard with this kind of noise on a constant basis.	11/14/2016

LAMP-PC00027

To protect the value of El Segundo Estate and the people who live in El Segundo, we need your help and support.

Please allow the development of this Modernization Program to be not only environmental improvement for the ground, but also to Modernize the air traffic environment for people who live in the City of El Segundo, so we can love and be proud to have LAX, the world class airport, as our neighbor.

Thank you for your consideration, concern and support of your neighbors.

Maria Tong

Re: Comment Letter - Landside Access Modernization Program ("LAMP") EIR

Dear Ms. Quintanilla:

We are submitting this comment letter to Los Angeles World Airports ("LAWA") regarding the above-referenced Draft Environmental Impact Report ("DEIR") for the Landside Access Modernization Program ("LAMP").

In addition to fully supporting those questions, issues and concerns set forth generally in that certain Comment Letter submitted by Gateway to Los Angeles, dated November 11, 2016, and specifically in paragraphs 1, 4, 5, 8 and 13, we have additional concerns about and provide comments on the following issues:

SHUTTLE ACCESS ISSUES:
As LAWA and the Board of Airport Commissioners are aware, we currently operate shuttle fleets into the Central Terminal Area ("CTA") to serve our customers and guests utilizing each of our facilities located at 9101 Sepulveda Boulevard ("Sepulveda Parking Spot") and 5701 Century Boulevard ("Century Parking Spot"). Under the DEIR with the implementation of "LAMP," it appears that neither of Century Parking Spot or Sepulveda Parking Spot would be allowed to pick up and drop off in the CTA, but instead will be limited to the Intermodal Transportation Facility West ("ITF West"). This is problematic and concerning to us for a number of reasons, set forth below.

If the goal under LAMP implementation is to restrict vehicles within the CTA to reduce traffic congestion, it seems contrary to common sense that our shuttle buses - which hold scores of local passengers - would be restricted from CTA access, while private cars, taxis, Lyft, Uber, limousines, which often carry only one or two passengers, would still be allowed access to the CTA.

In addition to our belief that curtailing CTA access for passenger aggregators like our shuttles is not sound policy, it is not clear how The Parking Spot shuttles from the Sepulveda Parking Spot would even access ITF West. This underscores another significant concern for us in that the DEIR, while it is not explicitly clear, seems to include a prohibition against commercial vehicles utilizing ITF East. Again, we feel strongly that local passenger aggregating shuttles such as those used in our operations should still be permitted to access the CTA, but if that definitively

theParkingSpot

LAMP-PC00028

200 West Monroe Street, Suite 1500 • Chicago, IL 60606
Phone: 312.453.1700 • Fax: 312.453.1627

will not be the case, it is absolutely not clear to us why there would be any prohibitions against commercial shuttle use of the ITF East, which in the case of the Sepulveda Parking Spot would be the ITF located much closer in proximity than the ITF West.

Our comment and request is that LAWA reconsider this restriction to our shuttle access to the CTA under the LAMP implementation, and in the alternative, provide more information on whether commercial vehicles such as the shuttles utilized by the Sepulveda Parking Spot will have access to the more than just the ITF West (ideally the CTA but at a minimum ITF East). The DEIR indicates that private shuttles must *only* use the ITF West. Our comment and request is that private shuttles be allowed access to both of the ITFs, as well as to the CTA. If the goal is to reduce traffic congestion, then if one facility is full or congested, the shuttle buses should be allowed the flexibility of dropping off and picking up at any of these facilities.

Finally, in the DEIR's Table 17 of Appendix O of the Off-Airport Traffic Study, the table contains vehicle occupancy numbers during peak travel times that appear to be, from our operational knowledge, much too low. Our shuttles are quite full during peak travel periods, despite what Table 17 reflects. Our comment and request is that LAWA re-examine these vehicle occupancy assumptions for shuttles during peak periods, and clarify or correct Table 17, which appears to contain inaccurate information. As we have routinely done in the past with regard to many issues, including this specific item regarding shuttle occupancy, we are more than willing to work with LAWA staff to determine data that we believe will more closely represent real time and life numbers.

OFF-AIRPORT PRIVATE PARKING SHUTTLE ROUTES

Although Appendix W of the traffic impact analysis (TIA) provides an exhibit that identifies existing shuttle routes, there is no information in the DEIR that shows proposed shuttle routes and what the impact on shuttle routes will be due to the proposed changes to be made to 98th Street.

With implementation of LAMP, new shuttle routes will be required, however the DEIR does not disclose or discuss the proposed shuttle routes and what impact this would have to traffic flows on study area roadways and more specifically on 98th Street. Given the fact that our Century Parking Spot location's shuttles, guests and employees rely predominately on 98th Street for ingress and egress, this is very concerning. To underscore this point, the DEIR does not analyze the intersections of 96th Street at Sepulveda Boulevard, 98th Street at Sepulveda Boulevard, and New "A" Street at 98th Street which all may be impacted by the new shuttle routes that will be required to access the ITF and potentially the CTA.

98th Street extension traffic along the study area roadways will increase significantly as identified in Appendix W. Notwithstanding, the DEIR does not evaluate the potential effects of congestion due to the increase in traffic and how this would impact the intersection of 98th Street at Bellanca Avenue for which no operational level of service is disclosed in the DEIR. Given that the DEIR fails to disclose potential impacts to 98th Street at Bellanca Avenue, 96th Street at Sepulveda Boulevard, 98th Street at Sepulveda Boulevard, and New "A" Street at 98th Street it appears that

200 West Monroe Street, Suite 1500 • Chicago, IL 60606
Phone: 312.453.1700 • Fax: 312.453.1627

the DEIR does not provide adequate mitigation for these impacted intersections and thus fails as a source of public disclosure pursuant to the California Environmental Quality Act (CEQA).

Even more specifically, as identified in the DEIR, the traffic volumes on 98th Street west of Bellanca Avenue during the PM peak hour will increase from 225 trips for existing conditions to 1,625 trips under Future 2035 with LAMP conditions. This is over a 600% increase in traffic that would severely impact access to facilities on 98th Street including but not limited to the Century Parking Spot facility. Furthermore, the DEIR should have evaluated the operational level of service specifically at the Century Parking Spot location but failed to do so even though the traffic volumes for existing and future conditions are available and disclosed in the DEIR. Even more concerning is that the DEIR does not provide a queuing analysis on 98th Street with or without improvements. The queues on 98th Street are more likely than not to block access to existing driveways along the 98th Street corridor given the significant increase (over 600%) in forecasted volumes. In layman's terms, this means that not only will 98th Street have significant back-up but so too will the drive aisles inside of our Century Parking Spot location, causing significant customer dissatisfaction, environmental concerns due to increased vehicle idling not to mention likely insurmountable gridlock in getting into and out of our Century Parking Spot facility.

We strongly believe that the severe increase in traffic due to LAMP along 98th Street will provide for inadequate gaps for vehicles exiting the Century Parking Spot location and thus may also result in a safety concern for vehicles (including guests' vehicle and our shuttles) utilizing our driveway on 98th Street. The safety concerns are further exacerbated by the fact that the proposed roadway improvements on 98th Street will result in a complete elimination of the existing two-way left turn lane that currently provides a safe refuge for inbound and outbound vehicles making a turn on 98th Street. Vehicles wanting to make a left turn into or out of any driveways along 98th Street would now be required to cross two lanes of traffic and would not only block the through vehicle movements, causing delays, but could also result in a safety concern and an increase in automobile accidents (which will undoubtedly also cause delays). The FEIR should evaluate and address these safety issues along the numerous impacted driveways on 98th Street. As LAWA knows, if any new impacts are identified this could warrant recirculation of the DEIR pursuant to CEQA requirements.

The TIA and 98th Street Operational Analysis utilizes the Transportation Research Board, Circular 212 Critical Movement Analysis (CMA) Planning Method for intersection analysis. While this methodology is recommended in the LADOT Traffic Study Policies and Procedures (August 2014) for land use development projects it is not suitable for assessing impacts associated with infrastructure projects including transit, rail, bicycle and roadway improvements. We can all agree that LAMP is more than a mere land use development project. LADOT guidelines specifically state that microsimulation may be necessary to fully understand the effects of the project in terms of queue lengths, traffic signal timing parameters, and transit travel times etc. The DEIR does not provide any microsimulation and therefore fails to disclose potential queuing impacts.

LADOT guidelines also state that intersection capacity at intersections along a congested corridor may need to be adjusted to account for reduced capacity due to gridlock, heavy

Phone: 312.453.1700 • Fax: 312.453.1627

pedestrian volumes or other factors. Gridlock and heavy pedestrian volumes are expected under Future Conditions With Project, but the DEIR fails to account for these factors.

Our comment and request is that LAWA analyze the intersections of 96th Street at Sepulveda Boulevard, 98th Street at Sepulveda Boulevard, and New "A" Street at 98th Street for mitigation purposes and take into consideration and address the significant safety and service concerns related specifically to the Century Parking Spot location set forth in the preceding paragraphs as a result of increased 98th street traffic and vehicle queing issues.

MODE SHARE AND TRIP GENERATION

A review of the TIA in Appendix O of the DEIR identifies the various ground transportation mode shares at the CTA, however additional information must be provided to ensure full disclosure pursuant to requirements under CEQA.

Table 17 in the TIA identifies the existing ground transportation mode shares at the CTA as well as the vehicle occupancies assumed in the DEIR technical reports. The source cited for this information is Ricondo & Associates, Inc., however the DEIR does not disclose the count data information to support the mode shares or vehicle occupancies (with vehicle occupancies discussed in more detail in the section herein titled Shuttle Access Issues).

Generally speaking, the DEIR does not use consistent nomenclature when describing different modes of transportation (e.g., private parking shuttles in Table 17 versus off-airport private parking in Table 18). This makes it very difficult for the public and decision makers to appropriately review the documentation and fully understand what, exactly, is being analyzed so it is recommended that the FEIR use consistent nomenclature throughout the EIR.

Lastly, Table 18 in the TIA identifies future mode shares at the CTA, ITFs, and CONRAC. Specifically, the mode share for Off-Airport Private Parking identifies a significant reduction in the mode share from existing conditions (e.g. Table 17) and no information is provided to substantiate this reduction in mode share other than a source reference to Ricondo & Associates, Inc. however, as previously stated, no information from Ricondo & Associates, Inc. is provided in the DEIR. We would like to understand what assumptions were made in determining the significant reduction in mode share from existing conditions. This fact on its face is obviously concerning for an operator whose livelihood depends in large part on capturing mode share, but also raises the question posited here – what information and assumptions were relied upon in coming up with this calculation?

Further confounding us on this issue, Table 6 in the TIA identifies the existing trip generation for Off-Airport Parking during the AM, Mid-Day, and PM Peak Hours. The trip generation for future conditions is not consistent with the decrease in mode share shown in Tables 17 and 18. Again, as stated above, no information is provided to substantiate the trip generation other than a source reference to Ricondo & Associates, Inc. however, as previously stated, no information from Ricondo & Associates, Inc. is provided in the DEIR.

Our comment and request is that LAWA provide more detail with regard to the underlying data, information and assumptions that were used by LAWA and Ricondo & Associates, Inc. in

200 West Monroe Street, Suite 1500 • Chicago, IL 60606
Phone: 312.453.1700 • Fax: 312.453.1627

determining the figures set forth in the DEIR and specifically Tables 6, 17 and 18 with regard to existing and future mode share and trip generation.

We welcome the opportunity to continue working with LAWA on LAMP and the many other projects that are in store in the years to come. We applaud the efforts of Executive Director Flint and her staff to take these critically necessary steps forward in making sure that LAX operates as a world class airport benefiting the hundreds of thousands of national and international travelers coming through its doors every day, not to mention the scores of local Los Angeles citizens which The Parking Spot is proud to be able to serve during the trip through LAX.

Sincerely,

Kevin Shrier

VIA HAND DELIVERY

Los Angeles World Airports
Board of Airport Commissioners
Attention: Evelyn Quintanilla,
Chief of Airport Planning
One World Way, Room 218
Los Angeles CA 90045

Re: Los Angeles International Airport Landside Access Modernization Program DEIR comment letter (State Clearinghouse No. 2015021014)

Dear Honorable Commissioners and Ms. Quintanilla:

The following comments are in response to the Draft Environmental Impacted Report (DEIR) for LAX's Landside Access Modernization Program (LAMP) on behalf of Paul Solomon and 6171 Century, LLC, owner of the building located at 6171 W. Century Boulevard, located within the project area at the northeast corner of W. Century Boulevard and Vicksburg Avenue. 6171 W. Century is home to an 83,000 square foot office building, with tenants employing approximately 300 workers on-site. 6171 Century is a member of the Gateway Los Angeles Business Investment District, and this comment letter adopts by reference any DEIR comment letters submitted by the Gateway LA BID or other Gateway LA BID members to the extent they are not inconsistent with these comments.

As a preliminary matter, please ensure that all projected-related notices are timely provided to this office.

I. Traffic and Circulation

Traffic and circulation issues are the predominant concern, due to 6171 Century's location only one block east of Sepulveda in the heart of the project area between the Central Terminal Area (CTA) and the Intermodal Transportation Facilities (ITFs). It is critical that planned improvements to roadway and other transportation infrastructure in the general and immediate vicinity of 6171 Century do not hamper safe and uninterrupted access to 6171 Century and other nearby businesses by pedestrians, bicyclists, and drivers.

Pedestrian Access

The DEIR should more completely investigate, describe, and analyze pedestrian access to the CTA. In particular, the project must provide for continued safe pedestrian access between 6171 Century and the CTA. 6171 Century tenants appreciate that existing conditions in the

project area allow for relatively easy pedestrian access to the CTA's northern terminals. Terminal 1 is located less than 2,000 feet away. (Once constructed, Terminal 0 will be less than half that distance.) A series of sidewalks and crosswalks along existing street segments provide largely safe pedestrian access.

Challenges do exist, however. The crossing of Sepulveda Blvd is dangerous, and access to the CTA's southern terminals is circuitous and mysterious. Lack of adequate wayfaring signage is a significant problem. Given the project's massive planning and investment, much-needed improvements for pedestrian access to the entire CTA, including improved safety and signage, should not be an afterthought. With the planned Phase 2 removal of the W. Century Boulevard street segment west of S. Sepulveda Blvd. (DEIR 4.12-24), it is critical that accommodations for continued pedestrian access be planned for once the W. Century west of S. Sepulveda street segment is removed.

While pedestrian access to the West ITF has been accounted for in the DEIR, no similar planning appears to have been done to maintain pedestrian access between 6171 Century and other nearby offices, hotels, and other businesses and the CTA. DEIR Appx. O, p.90. The DEIR reports that "Pedestrian access from Century Boulevard to World Way North would be maintained," but no additional details are provided. *Id.* at 95. Pedestrian access between 6171 Century and the West ITF is an available, but inadequate, substitute for pedestrian access to the CTA, because many pedestrian trips would be extended in both time and distance.

This is not merely an issue of pedestrian convenience. When the CTA was largely evacuated recently due to fear of an active shooter, many travelers streamed out of the CTA to Century Boulevard. Consideration of this pedestrian route for emergency evacuation must be considered as part of the project.

Planned pedestrian access between 6171 Century and the West ITF appears to be adequate, but the DEIR should provide additional information to explain planned pedestrian improvements that will accompany Phase I and Phase II street segment changes. Planned pedestrian improvements in the vicinity of the West ITF (including street furniture, lighting fixtures, signposts, newspaper stands, trash receptacles, and other elements, *see* DEIR Appx. O, p. 90) should extend to the businesses along Century Boulevard to encourage and facilitate greater pedestrian use.

Bicycle Access

Continued and enhanced safe bicycle access between 6171 Century and the West ITF should also be further studied and provided as part of the project. A number of current 6171 Century tenants use bicycles as a primary transportation mode, and recent tenant improvements at 6171 Century have included bicycle lockers and shower facilities to encourage this use. With the implementation of new Metro and APM facilities the number of cyclists is likely to grow. Moreover, numerous nearby hotels, offices, and other businesses would likely increase facilities for their workers, tenants, and guests when planned LAMP facilities are constructed, particularly if bicycling infrastructure is intelligently expanded beyond what is presently planned.

The DEIR contemplates amending Mobility Plan 2035 in the project area to maintain consistency between the project and Mobility Plan 2035. DEIR 4.8-44. The DEIR finds that there will be no significant impacts to bicycle facilities. DEIR 4.12-153. While maintaining consistency with current planning goals and ensuring no significant impacts to bicycle facilities are admirable goals, the project could go a lot further toward expanding bicycle use within and without the project area, by planning for and providing bicycle facilities in addition to those already planned. The DEIR should provide a greater level of detail with respect to bicycle infrastructure, which would promote substantially greater input from the cycling community and other stakeholders to ensure that project plans are sufficient for their intended purpose and can continue to expand to adequately support a growing cycling community.

Existing and planned bicycle facilities are presented in Appendix O, Off-Airport Traffic. Figure 8, Existing and Planned Bicycle Facilities, DEIR Appx. O, p. 69. The proposed bicycle facilities described in that graphic appear to be somewhat inconsistent with those described in the DEIR elsewhere. *See* DEIR, Figure 2-55, p. 2-203. A clarification of the conflict between proposed facilities is necessary.

Finally, to the extent that bicycle facilities are not planned to extend further west on Century Boulevard than Airport Boulevard, 6171 Century suggests that the proposed Multi-Use Path be extended along the north side of W. Century Boulevard from Airport Boulevard to S. Sepulveda Boulevard. Alternately, a similar bicycle facility could be made part of 98th Street west of Airport Boulevard as shown in the above-cited Figure 8. DEIR Appx. O, p. 69.

Vehicular Access and Parking

It is critical that vehicle access to 6171 Century, its dedicated parking facilities, and other on- and off-street parking be maintained during all phases of construction and operation of the LAMP project. 6171 Century has a 12-space lot on site, 200 dedicated parking spaces in the Joe's Parking structure located at 6141 Century Boulevard, and tenants and guests of 6171 Century also use the Quik Park facility on Vicksburg Avenue between Century and 98th Street as well as parking meters located on Vicksburg Avenue between Century and 98th Street, and on 98th Street east of Vicksburg Avenue.

The DEIR notes that "[c]onstruction of the proposed Project could result in the closure of one or more lanes of a major off-Airport traffic carrying street for an extended length of time" and that "crosswalks, bike paths and pedestrian pathways may be restricted or close for a period of time." DEIR 4.12-238. The DEIR notes only that alternate routes would be provided. For such a massive undertaking, the DEIR provides very little detail as to the timing of expected impacts. For example, a Gantt chart provided in the DEIR shows that roadway projects during Phase I will begin in the second quarter of 2018 and continue until the fourth quarter of 2023, but these are not broken down in a meaningful way. Table 2-15, Construction Phasing, DEIR 2-179. Phase II roadway improvements will not begin until after the APM is operational, but no specifics with respect to expected timing are provided. DEIR 2-182. It would be most helpful to local businesses if a greater degree of precision could be provided for the timing of both Phase I and Phase II roadway impacts and expected detours and approximate durations of short and long-

term closures.

Mitigation measure MM-ST (LAMP)-1 creates a Construction Traffic Project Task Force to coordinate among LAWA and other public infrastructure projects and provide notification and an opportunity for public input and support, among other things. DEIR 4.6-36 to 37. This will be a vitally important mitigation for local businesses, but does not excuse the project from providing as much advance information about specific locations and timing of roadway impacts as possible, and amending that information with increasing levels of precision as actual construction commences.

With respect to mitigation measure MM-ST (LAMP)-4, which restricts "designated major or secondary highways" from being closed to vehicular or pedestrian traffic except at night or on weekends, because the street configuration in the vicinity of LAX is complex, 6171 Century requests more information as to specifically which streets and street segments are so designated, in order to know how the mitigation might protect its vehicle, parking, and other access. Depending on which streets this mitigation is intended to protect, additional mitigation measures may be necessary.

The DEIR notes that approximately 200 metered parking spaces will be removed, including approximately twelve in reasonably close proximity to 6171 Century along 98th Street to the east of Vicksburg Avenue. Table 2-14, Impacted Street Parking, DEIR p. 2-174. The DEIR also provides analysis of several operational options regarding 98th Street. DEIR Appx. O, pp. 190-192. The analysis of 98th Street operational options does not mention parking meters, suggesting that whether or not one of the operational options is selected, the parking meters will be removed as described in the main DEIR document. It would be helpful for the FEIR to clarify whether this is actually the case. Business owners generally prefer to retain as much short- and long-term street parking in the vicinity of their businesses as possible.

II. Other Project Concerns

Potential Cellular Telephone Infrastructure Conflicts

6171 W. Century Blvd. is a three-story office building with multiple cellular telephone antennas located on the roof. These provide cellular telephone signals radiating out in multiple directions, including to the south and east, toward the proposed elevated APM. The cellular telephone antennas are located at heights of approximately 45–60 feet. The APM guideway is described as varying in height from approximately 70 feet above grade within the CTA to a height of approximately 50 feet above grade near the ITF East and car rental facility. DEIR p. 2-32. Note, however, that the DEIR seems inconsistent on this point, stating that the top of rail height of the APM structure in the vicinity of the ITF West facility is only 40 feet. DEIR Appx. M, p. M-40. The precise height of the APM Guideway in the vicinity of 6171 W. Century is thus not entirely clear.

Whatever the height of the APM, the DEIR should analyze whether the location of the APM structure or trains might interfere with the existing cellular telephone antenna infrastructure

at 6171 W. Century, and if so, how significant the interference could be, and what mitigations would minimize such an impact, if any.

Noise and Vibrations

Based on the location of the 6171 Century building amidst major Phase II roadway activities in and around W. Century Boulevard, it appears that the 6171 Century tenants could experience significant noise impacts during one or both construction phases if traffic noise exceeds a property line measurement of an increase of 3 db(A) or more in Community Noise Equivalent Level (CNEL). Given that Phase I construction activities in the vicinity of 6171 Century and other local businesses will commence in 2018, and Phase II activities are intended to commence in approximately 2023 and not be completed until approximately 2035, it is critical that any potentially significant noise impacts that might affect local businesses at the center of construction and operational activities be fully identified and mitigated, since the building will experience 18 years or more of construction activity. An additional noise mitigation should be introduced requiring periodic noise monitoring in high construction activity locations and high construction traffic locations for both Phases I and II to determine whether additional noise mitigations might be necessary.

III. Conclusion

Thank you for the opportunity to provide these comments on the LAX LAMP project DEIR.

Sincerely,

John P. Given

Re: Comment Letter in response to LAWA's Draft "LAMP" EIR

Dear Ms. Quintanilla:

On behalf of **Gateway to LA, a Property-based Business Improvement District ("Gateway")** serving area property owners and stakeholders since 1998, we are submitting the following comment letter to Los Angeles World Airports ("LAWA") regarding the above-referenced Draft Environmental Impact Report ("DEIR") for the Landside Access Modernization Program ("LAMP").

1. The DEIR indicates in the Appendix O Report that **shuttle access** to the Central Terminal Area ("CTA") will be restricted (eliminated) for some classes of commercial operators, to encourage pick-up and drop-off at the ITF West, and to reduce congestion in the CTA. Appendix O Report reads: "*LAWA would restrict access to the CTA for some classes of commercial operators such as shared ride vans, scheduled service buses, courtesy shuttles, and pre-arranged charter carriers. LAWA **may** also institute pricing differential strategies to encourage other commercial vehicle operators such as taxis, limousines and … Uber and Lyft .. to pick up and drop off passengers at the ITF West. …. Approximately 16 percent of all airport traffic would utilize the ITF West, which is assumed to consist of charter vans, taxis, limos and paid rides, **parking patrons, hotel shuttles**, and private vehicle pick ups and drop offs.*"

   Gateway to LA is concerned about the impacts to the business and operations of those members who operate hotels and parking facilities, which currently have shuttle buses which are allowed to pick up and drop off passengers in the CTA area.

   If the goal under LAMP implementation is to restrict vehicles within the CTA to reduce traffic congestion, it seems counter-intuitive that per the DEIR, shuttle buses which hold scores of passengers, including the hotel shuttles and off-airport parking shuttles, would be restricted under any circumstances from CTA access, while private cars, taxis, Lyft, Uber, limousines – which often carry only one or two passengers – would still be allowed access to the CTA. **Gateway requests that LAWA reconsider this restriction on hotel and off-airport parking shuttles accessing the CTA under the LAMP implementation.** Hotel

9841 AIRPORT BOULEVARD, STE. 100, LOS ANGELES, CA 90045

shuttles and off-airport parking shuttles are "aggregators" of passengers, whereas taxis, Lyft, Uber and limousines typically transport only one or two passengers per trip.

Further, in the DEIR's Table 17 of Appendix O of the Off-Airport Traffic Study, the table contains vehicle occupancy numbers that appear to be too low for some modes of transportation. Table 17 shows that "Vehicle Occupancy" for "Private Parking Shuttles is only 1.9 passengers on Arrival Level 1, and only 3.4 passengers on Departure Level 2. Similarly, Table 17 shows "Vehicle Occupancy" for "Hotel Shuttles" is only 3.5 passengers on Arrival Level 1 and only 3.9 passengers for Departure Level 2. These Vehicle Occupancy numbers, per Table 17's notes, reflect that these passenger numbers/vehicle occupancy numbers are during "**arrivals peak period**" and "**departures peak period**." The reality is that both Private Parking Shuttles and Hotel Shuttles operate close to full and sometimes standing room only, during peak periods. **Gateway requests** that LAWA re-examine these vehicle occupancy assumptions for Private Parking Shuttles and for Hotel Shuttles during peak periods, and clarify or correct Table 17.

Additionally, several of the Gateway hotels are closer to the ITF East than to the ITF West. Similarly, several of the Gateway private parking operators are closer to the ITF East than the ITF West. The DEIR seems to indicate that hotel and private parking shuttles must ***only*** use the ITF West. **Gateway requests** clarification in the Final EIR (FEIR) that would accommodate hotel and private parking shuttles being allowed access to both ITFs, as well as to the CTA. If the goal is to reduce traffic congestion, then if one area is full or congested, the shuttle buses should be allowed the flexibility of dropping off and picking up at any of these facilities.

Gateway requests clarification in the FEIR related to the shuttle restriction issue for hotel shuttles and private parking shuttles. Gateway believes the DEIR, as written, unfairly concludes that to reduce congestion in the CTA, that CTA access should be eliminated for hotel and private parking shuttles which have high passenger occupancy, but at the same time allow CTA access to private vehicles, taxis, Lyft, Uber and limousines, with low passenger occupancy.

An alternative, which Gateway requests LAWA to analyze prior to circulation of the FEIR, is to continue to allow **curbside access in the CTA** to commercial vehicles carrying more passengers (for a reasonable fee per shuttle trip), while restricting private vehicles, taxis, Lyft, Uber and limousines to dropping off and picking up passengers on the first level of each CTA parking structure **for a fee**, or alternatively those private vehicles, taxis, Lyft, Uber and limousines can drop off or pick up at one of the ITFs **for free**.

Another alternative analysis which **Gateway requests** LAWA at least consider is that the FEIR analyze reclassification of taxis and Transportation Network

Carriers ("TNCs") like Lyft and Uber so that these commercial operators are treated in a manner which is consistent and fair compared to other commercial operators (which other commercial operators' shuttles carry more passengers per vehicle) who desire access to the CTA. If the goal is to reduce congestion in the CTA, hotel and private parking operator shuttles should not be arbitrarily penalized and denied access to the CTA, while private vehicles, taxis, Lyft, Uber and limousines which carry fewer passengers get to continue such CTA access.

2. The DEIR shows a diagram of existing shuttle routes, but does not include a diagram or analysis of future shuttle routes with the LAMP project implemented. **Gateway requests** that the FEIR show such a "future, with project" diagram in its FEIR.

3. **Gateway requests** clarification in the FEIR related to the future location of the **taxi, limousine and TNC holding area** under LAMP implementation. Fairly recently, this holding area was shifted by LAWA to allow vehicular access to the holding area from 98th Street, which access has negatively impacted traffic conditions along 98th Street and thus negatively impacted Gateway property owners and businesses due to the increased congestion along this corridor. The Off-Airport Traffic Study in Appendix O appears to be silent on the future location or relocation of the taxi holding area under LAMP implementation. Gateway strongly urges LAWA to analyze the impacts of the existing taxi holding area in terms of vehicular counts, and that the FEIR will reflect a location which does not allow access onto 98th Street within the BID area.

4. In terms of essential streets that serve Gateway to LA properties and businesses, 98th Street is second only to Century Boulevard in terms of its importance to Gateway. Under LAMP implementation, the vehicular traffic along 98th Street will be significantly altered and increased: 98th Street will be extended to provide an east-west connection between the 405, the CONRAC, the ITF East and the ITF West; a new or altered intersections will be created; a new segment of 98th Street will be constructed beneath the METRO/LAX Crenshaw rail line; and an existing segment of 98th Street will be widened. **Despite the amount of additional traffic that will now impact 98th Street, out of 183 intersections studied in the DEIR, only one intersection along 98th Street was analyzed**. Gateway does not understand this oversight, especially related to future conditions, and whether the alterations to and additional traffic along 98th Street will cause significant impacts. If only one intersection (98th Street and Airport Boulevard) along 98th Street was studied, how can the DEIR reach a conclusion that no further mitigation measures are required along 98th Street so that under LAMP implementation 98th Street does not end up in a gridlocked roadway condition? **Gateway requests** that additional 98th Street intersections be studied prior to circulation of the FEIR, including 98th Street and Bellanca, 98th Street and Aviation, 98th Street and Concourse Way, and 98th Street and Sepulveda, and that if there are impacts, that appropriate mitigation measures be recommended in the FEIR.

5. While the DEIR contains discussion related to the intersection of Bellanca Avenue and Century Boulevard, it was not clear based on Gateway's review of whether there was adequate analysis of future **queuing or "stacking" conditions** on both 98th Street (for vehicles headed westbound on 98th who are turning left onto Bellanca), as well as for cars travelling southbound on Bellanca trying to turn onto Century Boulevard. Especially during peak periods, Gateway has concerns about whether the respective intersections' Level of Service and the possibility of queuing or stacking of vehicles at the Bellanca/98th Street intersection and at the Bellanca/Century intersection under LAMP implementation were adequately analyzed. **Gateway requests** that the FEIR clarify these impacts, and if needed to include adequate mitigation measures.

6. In a collaborative effort several months ago, Gateway representatives, the City of Los Angeles Planning Department, the City's outside design team, and LAWA worked on streetscape and design plans leading to the creation (but not implementation) of the **Century Boulevard Streetscape Plan**. While the DEIR references the Century Boulevard Streetscape Plan and its design guidelines, and *seems* to indicate its implementation under the LAMP improvements, it is not included as an actual mitigation measure. **Gateway requests** that the FEIR clarify whether implementation of the Century Boulevard Streetscape Plan will be done under the LAMP program, and a timetable showing when the Streetscape Plan improvements will be implemented. Gateway is very concerned that adequate sidewalks to enhance pedestrian flow, bicycle lanes, pedestrian connectivity, and pedestrian and bicycle safety impacts be mitigated under the LAMP improvements.

7. The DEIR contained little discussion regarding a **possible pedestrian bridge over Sepulveda Boulevard** that would link Century Boulevard properties, businesses and their patrons to the CTA. The only discussion was in the FEIR was that "LAWA would preserve a pedestrian connection between the CTA and W. Century Boulevard as part of the proposed Project, through **either** an at-grade crossing or future pedestrian bridge." A pedestrian bridge linking Century Boulevard across Sepulveda and ultimately to the CTA would provide much **greater safety to pedestrians** than an at-grade pedestrian crossing, and is a priority to Gateway owners and businesses. **Gateway requests** that the FEIR reflect further analysis including a conceptual pedestrian bridge plan in the FEIR.

8. From Gateway's review of the DEIR, it is not clear to Gateway whether the ITF East will accommodate LAWA employee parking *and* LAX passenger parking. While our review of the DEIR indicates that the ITF East may provide 8,300 parking spaces in a structure, there is also discussion that alternatively, the ITF East may provide a 1,400-parking space surface lot, which is a difference of 6,900 parking spaces. **Gateway requests** that the FEIR provide clarification about: (a) the likely number of total parking spaces that will be provided in the ITF East; (b) when those ITF East parking spaces will become available; and (c)

who the ITF East parking spaces will accommodate (how many parking spaces for LAWA employees, and how many parking spaces for LAX passengers); and (d) **where LAWA employee parking** will be located if **off-airport** and within the BID's borders.

Additionally, in terms of the DEIR analysis concerning "**Potential Future Collateral Development**" sites, land uses were referenced but did not include the possible land use of private parking facilities. Since the DEIR indicates that the ITF East may provide 8,300 parking spaces in a structure, or alternatively, the ITF East could provide a 1,400-parking space surface lot, which is a difference of 6,900 parking spaces, **Gateway requests** that one of the land uses for "Potential Future Collateral Development" sites includes private commercial parking facilities, as well as greenbelt space, to provide flexibility. Additionally, since some of these Potential Future Collateral Development sites are anticipated to be used temporarily for construction staging based on the LAMP facilities' building/development schedule, a **timeline** should be provided in the FEIR of approximately ***when*** these sites, which the EIR estimates could accommodate up to 900,000 square feet of commercial development, could be available for future collateral development.

9. The EIR indicates in Section 1.4.1.11.2 related to **Law Enforcement and Police related impacts** that:

   "*The proposed Project would result in an increase of uses that would generate a demand for police protection services by passengers and employees. The proposed Project* ***could*** *include the placement of a satellite LAWAPD facility office within proximity to the CONRAC or ITF East to maintain adequate response times across the Project site, if needed. As such, the proposed Project would* ***not*** *result in a substantial increase in on-airport population or land use changes that would require a substantial increase in law enforcement services to maintain adequate services or require new or expanded facilities without providing adequate mechanisms for addressing these needs. The proposed Project would also incorporate various planned security features to reduce increased demand on LAWAPD, including but not limited to security fencing, surveillance cameras, security lighting, and emergency phones/call boxes. As discussed in Section 4.11.2, Law Enforcement, the proposed Project would have a less than significant impact with incorporation of mitigation measures.*"

   Gateway is concerned about adequate police protection, considering the millions of new square feet of development under the LAMP within the Gateway area and a significant increase of people and vehicular traffic coming to the new development which will include the Consolidated Rental Car Facility (CONRAC); the Intermodal Transportation Facilities (ITF East and ITF West), the Maintenance Facilities, the Automated People Mover System (APM) and its stations.

   These facilities alone – i.e., CONRAC, ITFs, Maintenance Facilities, APM and its stations - without counting any "*potential future related development*" will result in **over 10 million square feet of new development**, require many employees to staff each facility, attract thousands of people and airport passengers to the CONRAC, ITFs and APMs daily, and attract thousands of cars either dropping off

or picking up passengers, or parking. The facilities are being developed to limit vehicular traffic into and out of the Central Terminal Area (CTA) roadways, meaning that vehicles will be driving to and leaving from the "landside" non-airport area around Gateway to LA properties, in unprecedented numbers.

However, the **Law Enforcement mitigation measures** called for in the EIR are only for new lighting, cameras, call boxes and fencing. Instead of developing new police facilities and adding police personnel, the EIR is equivocal and states that the proposed Project "***could***" include the placement of a satellite LAWAPD facility office within proximity to the CONRAC or ITF East, but it is not a mitigation measure.

The EIR states: "At this time, LAWA has not included a satellite [police] office in the proposed Project description…" [Page 4.11-43 of EIR]

Gateway believes that the mitigation measure related to law enforcement, requiring only new lighting, cameras, call boxes and fencing, is not adequate to address the exponential increase in people, vehicular traffic and over 10 million square feet of new development under the LAMP improvements (CONRAC, ITF East, ITF West, Maintenance Facilities, APM and its stations). **Gateway requests** that the Final EIR reflect the inclusion of a new, fully-staffed satellite LAPD station to be located within the Gateway to LA boundaries.

10. Similarly, regarding mitigation measures as related to **fire facilities and staffing** under the LAMP improvements, Gateway is concerned as to whether the mitigation measures proposed in the DEIR are adequate considering the LAMP facilities which will bring over 10 million square feet of new development, including the CONRAC, two ITFs and APM system and other improvements, which facilities will help facilitate and transport thousands of passengers daily off-airport. For example, the height of the Automated People Mover system within Gateway's area will range from 50 to 70 feet in the air. If there are **mechanical malfunctions** or acts of terrorism, is there an existing fire station within close distance with trained fire personnel and equipment to reach a rail car that is full of passengers who need to be de-boarded? No such discussion was found in the DEIR. Instead, the DEIR reflected mitigation measures meant for a small development, such as compliance with fire and building code, new fire hydrants, sprinklers and fire extinguishers, which seems inadequate to protect neighboring Gateway properties after the massive LAMP facilities are developed and activated. **Gateway requests** that the Final EIR reflect the inclusion of a mitigation measure which adds specially-trained fire personnel, equipment and possibly an expanded fire station facility within Gateway's border to mitigate possible impacts under the LAMP improvements.

11. Likewise, with the addition of new traffic circulation patterns, over 10 million square feet of new development under the LAMP, including the CONRAC, two ITFs, the APM system and other improvements, which facilities will help facilitate

and transport thousands of passengers daily off-airport, Gateway has concerns about **emergency response times** as the DEIR should have identified delays in response times and proposed mitigation measures. Gateway's hotels rooms hold thousands of guests daily and Gateway businesses employ many service and professional personnel. If there is an emergency, Gateway owners are concerned about delays in emergency vehicles responding to the situation on a timely basis. Gateway requests that the FEIR clarify emergency response times, identify possible delays with development of the LAMP facilities, and propose adequate mitigation measures to be responsive.

12. In Gateway's review of the DEIR, there appeared to be no analysis of impacts from **light pollution and noise pollution** related to the rooftop parking activity of both the ITF East and ITF West. Since both ITFs will be developed with open roof parking, there is the potential for these open parking areas on the roofs to measure the size of a football field, as hundreds of vehicles will be parked on an open floor of parking with no roof covering the top. The DEIR should have included an analysis of potential impacts from light from the cars parking on the ITF roof at night, as well as from car alarms going off. Without adequate mitigation measures, this could impact Gateway hotel patrons facing either ITF, due to the night-time illumination from the rooftop parkers' car headlights. If car alarms go off, this could affect Gateway office tenants during the day and Gateway hotel patrons at night. **Gateway requests** that the FEIR reflect an analysis of these issues and propose mitigation measures if appropriate.

13. The DEIR reflects a mitigation measure called "**Construction Traffic Project Task Force**" or MM-ST (LAMP)-1, which states that LAWA will establish a Project Task Force specific to LAMP construction, to coordinate deliveries, monitor traffic conditions, advise motorists about detours and congested areas, and monitor and enforce delivery times and routes. **Gateway requests** that representatives from Gateway be included as members of this Project Task Force.

14. In Gateway's review of the DEIR, we found a lack of analysis concerning these possible impacts and corresponding mitigations, and request clarification or such analysis be discussed in the FEIR:

    a. Quantification of Vehicle Miles Travelled (VMT) on new street segments and on new or altered intersections, including "A" Street, "B" Street, "D" Street, Concourse Way extension and 98th Street extension. This lack of data in the DEIR makes it difficult to understand the potential impacts to Gateway owners and businesses in terms of traffic intensity and vehicular flow near their properties, and access or vehicular ingress/egress issues related to their properties.

b. The impact to existing properties along La Cienega Boulevard related to **new vehicular turn patterns** under LAMP that may affect Gateway property owners and businesses' ingress and egress along La Cienega Boulevard.

c. In terms of the "Potential Future Collateral Development" sites, the DEIR is silent about the development assumptions in terms of FAR or development intensity, making it difficult to understand the impacts to Gateway properties with the proposed development of the LAMP facilities **and** development of the "Potential Future Collateral Development" sites. For example, did the DEIR assume a certain Floor Area Ratio for the "Potential Future Collateral Development" sites or a particular land use?

d. Regarding: 1) the widening of 98th Street just east of Airport Boulevard; 2) the extension of 98th Street; the La Cienega/405 new ramp, no detailed design plans were provided in the DEIR.

e. Gateway did not see a discussion in the DEIR related to remote passenger check-in and/or luggage check-in at the ITF or CONRAC facilities, and requests that the FEIR discuss whether these services will be included as part of LAMP implementation.

f. Related to the development of METRO's Airport Metro Connector (AMC rail station) there was no discussion analysis in the LAMP DEIR related to how LAWA, the LAPD, the LAWAPD and/or the LAFD will coordinate fire-life-safety-emergency response as well as response to transient/homeless issues between the various City and County agencies.

We look forward to the above issues raised by Gateway to LA to be addressed in the FEIR in much greater detail, and where appropriate for additional mitigation measures to be recommended.

Very truly yours,

Laurie Hughes

Los Angeles International Airport Area Advisory Committee

Committee Members: Residents of El Segundo, Inglewood, Lennox, Hawthorne, Culver City, Marina del Rey and Westchester/Playa del Rey

November 14, 2016

Evelyn Quintanilla, Chief of Airport Planning
Los Angeles World Airports
1 World Way, Room 218
Los Angeles, CA 90045

Dear Ms. Quintanilla:

The Los Angeles International Airport Area Advisory Committee (LAXAAC), a committee of residents of the communities surrounding Los Angeles International Airport (LAX), is submitting these comments on the Draft Environmental Impact Report for the Landside Access Modernization Program (LAMP).

Initially, we commend LAWA for its efforts with respect to the LAMP, which our Committee fully anticipates will substantially improve not only the passenger experience at LAX but also improve the ground traffic in the neighborhoods surrounding the airport. We look forward to the day when the improvements described are fully operational. Nonetheless, there are some issues which the DEIR does not address adequately, and must be resolved in the final EIR.

The ITF, CONRAC and APM

As neighbors of the airport, our Committee members are hopeful that these facilities would take a substantial amount of traffic off the side streets as well as from the Central Terminal Area (CTA). In order for that to happen, passengers must actually use these facilities.

With respect to baggage check-in, the DEIR says only that there may be baggage check-in at both the ITF and the Consolidated Rental Car Facility (CONRAC), but that such baggage check-in may not occur until some unspecified time in the future, subject to FAA and TSA approval (Section 2.4.2). Nonetheless, we would hope that LAWA would do everything in its power to implement such facilities as soon as possible and to have them be complimentary for passengers. We expect that free check-in of bags at these locations would significantly impact their level of use, particularly for people with mobility issues, as well as for large families with substantial amounts of luggage.

The DEIR's discussion of the amount of time it would take passengers on the Automated People Mover (APM) to travel from CONRAC (9 minutes) and the ITF (7.7 minutes) to the CTA, mentions the wait time between trains, which it estimates as only two minutes (Table 2.2), but does not discuss the time to access the APM from parking or drop-off points. We are concerned that the additional time necessary to do so will impact usage of the APM. If, for example, it takes substantially longer to access and ride the APM from the ITF than it would take to be driven to the terminal and dropped off there, the EIR should mandate methods by which LAX can encourage passengers to use these facilities rather than to continue to follow the current procedure of having someone drive them into the CTA for pickup and drop off. The discussion of "pricing strategies" (page 85) to encourage use of the ITF instead of the CTA appears vague and needs clarification.

Although the DEIR considers alternatives for the APM, it does not discuss the possibility of constructing the APM so that it would be possible at a later date to construct an additional APM station

should it be determined that the walkways to the various terminals are too long. We recommend that LAWA evaluate whether it is possible to construct the APM to allow for future additional stations.

It is our understanding that the Metro light rail station proposed at 96th Street and Aviation Boulevard will not offer a park-and-ride lot. For that reason, the final EIR should include mitigation measures to discourage daily rail commuters from parking at the CONRAC or ITF in order to avoid an adverse impact on the availability of parking spaces for LAX customers.

In addition, although we commend the landscaping improvements planned for Sepulveda Boulevard, we anticipate that there will be additional numbers of passengers who will walk to and from LAX from Westchester on Sepulveda Boulevard. In order to make this area safer, LAWA should develop a mitigation plan for pedestrians for that street, with improvements in sidewalks, crosswalks and lighting.

Although the DEIR discusses cell phone waiting lots as a measure to encourage use of the ITF and CONRAC, there is no discussion of where such lots will be located. The current cell phone waiting lot has not been well used, due either to its location or the lack of publicity about it. Other parking lots (*i.e.*, Ralphs/CVS) and side streets such as West 92nd Street currently serve as *de facto* cell phone waiting lots, creating inconvenience for neighborhood residents.

Traffic

We are concerned that the traffic analysis underestimates the future traffic volume in the communities surrounding the airport, as well as the negative impacts of such volume on those communities. All the traffic volume forecasts for 2024 must be re-evaluated when LAMP's Phase 1 has been completed so that accurate traffic volume statistics are reviewed prior to any Phase 2 approvals.

We are concerned that traffic headed to the ITF and CONRAC will create traffic jams for northbound traffic on Aviation and La Cienega Boulevards and westbound traffic on Century Boulevard and Arbor Vitae Street. The DEIR does not fully discuss whether traffic headed for these facilities could be routed onto dedicated side streets which feed directly into them. Even with such mitigation, Aviation and Century Boulevards are likely to see greatly increased congestion, so we recommend that the DEIR implement staggered traffic lights and other mitigation measures on those streets. To avoid further cut-through traffic in the surrounding communities, the plan should not add any new streets that would permit further LAX access from the north.

In addition, funding for construction of the mitigation measures for the area freeways is not identified. In the event that LAWA is not permitted by law to fund these mitigation measures itself, funding from state agencies including Cal Trans and from surrounding cities must be specified. The new dedicated off-ramps from Interstate 405 are very important to the use of the ITF and CONRAC, and therefore, the funding of such improvements needs to be clarified. Can LAWA fund such improvements, or must other entities, such as the California Highway Department, participate? If so, to what extent is their participation expected? It would be pointless to identify mitigation measures that cannot be funded.

In addition, there is no reason to delay the implementation of those traffic mitigation measures that pertain to traffic generated by LAX employees and contractors. They should be implemented as soon as possible.

Construction Impacts

As neighbors of LAX, our committee members will be greatly impacted by the long-term construction that the LAMP will necessitate, and which the DEIR finds are "significant and unavoidable." We are pleased that the DEIR includes methods and procedures to ensure strict enforcement of all directives for controlling air pollution, noise, dust, hours of operation, construction workers' parking and transportation, truck hauling routes, equipment and materials staging and storing areas, and disturbance to neighboring communities. Please ensure that the construction permits provide for strict enforcement to mitigate the problem of fugitive dust and particulate matter spreading into nearby residential areas from construction sites.

We do not see in the DEIR any discussion of the impacts to all the surrounding communities caused by the reduction of CTA passenger parking during construction. We fully expect that passengers will increase their parking on residential streets during this construction, and the EIR should mandate mitigation measures to minimize that.

In addition, Imperial Highway is currently serving as a main hauling route during construction, and is in dire need of improvement. The EIR must include mitigation measures to improve and maintain this important thoroughfare both during and after construction, and must identify funds for such work.

We also are concerned about the 80 homeless individuals who the DEIR states are living in the Belford and Manchester Square areas who would "likely be absorbed into the nearby surrounding communities" (4.10.3.2.2), and the inadequate proposals which the DEIR suggests will shelter such people. Displacement of such people is not a "less than significant" impact (page 1072), and merely coordinating with other government agencies is inadequate. The final EIR should specify that LAWA assist financially with the construction of replacement housing for such people.

Finally, we hope that LAWA would implement a plan to communicate with the surrounding communities regarding construction impacts using both traditional and social media outlets.

Other Issues

The DEIR envisions the addition of 10 million square feet of airport facilities, yet the DEIR does not discuss the obvious need for additional police and fire department resources to serve such new facilities.

The relocation of the USO facility to the Theme building (Section 2.5.3) would not be easily accessible to service members because they will need to go to unsecured areas to access the USO facility. As it currently stands, many service members do not use the USO facility because it is too inconvenient for them to leave the secured area of their terminals for the USO facility. We do not see the proposal as an improvement, and recommend that the EIR propose moving the USO facility into a secured location accessible to all terminals.

In conclusion, we again compliment LAWA on focusing its efforts on improving the passenger experience at LAX and we look forward to the implementation of these plans. Please let us know if you have any questions regarding our views on the DEIR.

Very truly yours,

William Cumming

Los Angeles International Airport Area Advisory Committee
Committee Members: Residents of El Segundo, Inglewood, Lennox, Hawthorne, Culver City, Marina del Rey and Westchester/Playa del Rey

Mission Statement

The Los Angeles International Airport Area Advisory Committee (LAXAAC) has been in existence since 1976 as an advisory board to the Board of Airport Commissioners (BOAC).

Members of the committee are appointed by the appropriate legal authority (such as the Mayor or County Supervisor) in the communities immediately surrounding LAX:

El Segundo,
Lennox,
Hawthorne,
Inglewood,
Culver City,
Marina del Rey,
and the Westchester and Playa del Rey areas of Los Angeles.

The purpose of LAXAAC is to provide the BOAC with information regarding community sentiment with respect to airport operations. The members of LAXAAC have one overriding concern about LAX: **safety.** This concern includes safety for those who work or live near LAX in addition to air passengers, crews, and aircraft. Other significant concerns for committee members are noise, air and other pollution, and surface traffic in and around their communities.

The members of LAXAAC will continue to participate in LAX issue discussions and proposals and look forward to on-going interaction with the members of the BOAC and LAWA staff.

Comments to 9-2016 LAMP draft EIR STATE CLEARINGHOUSE NO. 2015021014

Evelyn Quintanilla
Chief of Airport Planning
Los Angeles World Airports
P.O. Box 92216
Los Angeles, CA 90009-2216.

Submitted online: www.lawa.org/ourLAX/comments.aspx

Dear Evelyn Quintanilla:

ARSAC has had no interest in filing suit against the Landside Access Modernization Project (LAMP). We then formally agreed in our 2016 Memorandum of Understanding with Los Angeles World Airports (LAWA) and the City of Los Angeles (MOU) that ARSAC will not file suit over the draft Environmental Impact Report (EIR) or aspects of this project. Pursuant to our rights under the MOU, we submit these comments to the LAMP DEIR.

ARSAC has participated in several briefings from LAWA and voiced concern over some aspects of this project but, in the totality, supports reduction of traffic in surrounding communities and Central Terminal Area (CTA) traffic via development of improved multimodal access into LAX and establishment of an effective network of regional airports. The following topics of concern are provided in accordance with the MOU to document our concerns and comments so that we may ultimately achieve the best possible project result.

Controlling Document Policy Changes

- Reverse the changes made during the previous Master Plan effort that modified the City General Plan to instruct constituents of the Westchester Playa Del Rey Plan to discover details of the LAX Plan and LAWA Plans from LAWA which would have precedence over their community rather than for LAWA to understand the existing WPDR Plan and to coordinate or plan accordingly.
- Removal of regional cooperation requirement should not be done. The EIR Goals and Objectives (P.7-2) fails to recognize that removal of regionalization statements eliminates the requirement to consider context within all network of airports instead of the narrower focus on only LAX.
- Removal of reference to the "Fly Away" Program, an on-going successful program, should not be removed.
- The new Appendix A is to provide for Monitoring and Reporting annually, but eliminates some requirements for mitigation efforts. This change is in conjunction with elimination of Specific Plan requirements because "LAWA does not intend to initiate any new LAX Master Plan projects." This "no new projects" could be changed after these requirements are removed. LAWA

currently, in good faith, intends to provide regular reporting of impacts but new management could change this if the requirement is removed.
- P7-10 (section 7.3) removes language regarding off airport parking, number of gates, and flyaways. It should instead include the ARSAC-LAWA MOU requirements.
- P7-11 (section 7.3.2) references some of the mitigation requirements but not all. All mitigations should be included. It also refers to air pollution reviews that should be based on actual data in subsequent years, not an assumed amount with no increase. Further, LAWA should be documenting PM 0.1 micron particle size as well as the "required" sizes. It is well documented that the smaller particles are more dangerous to breathe and that the correlation with larger sizes does not exist. This additional data should be required to create history until CARB or other agencies determines acceptable levels and the make up of particles.

Extension of MTA Metrorail

- Ensure that future rail designs can be extended in the into the Northside Development and north up either Sepulveda or Lincoln Boulevards. Although out of the scope of this project, also make it possible to accommodate transit south into the South Bay as well.

Automated People Mover (APM) and Central Terminal Area (CTA) improvements

- Accommodate luggage check as early as possible to minimize impacts on travelers with more than one bag or bulky items, children, elderly, or disabled.
- Within CTA ensure commercial and emergency vehicles are not impeded along with effective evacuation routes for vehicles and people.
- The proposed above grade APM must be convenient for both arrival and departing levels and for transferring passengers between terminals.
- Ensure the design will all for changes in service into each terminal along curbside or gates instead of locking in the few stops up the middle of the parking lots which require extended travel to the curbside before going to the gates.

General Comments

P 6-8 of the LAMP DEIR states "…based on the above analysis,…would not directly or indirectly induce LAX passenger growth." This is contrary to earlier studies. Congestion and inconvenience does impact growth at one airport or another when alternatives are available. A prior study showed that roadway capacity and gate constraints limited ultimate growth rather than current runway capacity. An anology is: if a group uses an quart pitcher to serve drinks and is satisfied then if a two gallon pitcher is substituted there will be more to serve as needed by a larger group. A comprehensive assessment of capacity constraints has not been completed. We expect "Natural" increased demand from population and economic growth to have as big an impact as the LAMP improvements so that congestion may remain after the project is complete.

The assumed passenger capacity and expected vehicle counts need clarification. LAWA has stated that it is based on the FAA estimates of 850K operations; whereas LAWA repeatedly has used a 2035 estimate of 96 MAP as the basis for estimating flight passengers to be used to serviced and as a basis for estimating for numbers of vehicles. The two numbers appear inconsistent. Attachment A is backup

ARSAC Alliance for a Regional Solution to Airport Congestion
8035 W. Manchester Ave., Ste. 710 Playa del Rey, CA 90293

material for this capacity review in which we calculated the annual ratio of millions of annual passengers (MAP)/100,000 flight operations using the annual flight operations/passengers information reports provided on the LAWA website. .

When the 2004 when Master Plan Alternative D was created it was expected that 153 gates would limit LAX capacity to 78.9 MAP (which coinsidently was the estimate for the limiting factor due to vehicles into the CTA). A changed flight mix with larger aircraft holding more passengers per flight operation and airline efficiency passenger load factors increases voids that assumption. This calculated ratio increased steadily from 2004 through 2015 (the last complete year available). The MAP increases yearly until the 2035 figure. The 2015 ratio calculates a 2035 estimate of 108 MAP, not 96. We would expect other limitations to stop LAX growth and cause the additional unconstrained growth sent to regional airports.

Additional comments

1. ARSAC had asked in its comment letter on the NOP to include other feasible APM configurations in the Central Terminal Area as a part of the range of alternatives. ARSAC's suggestions for APM alignments were created with passenger convenience in mind by going to all terminals with a minimum of walking distance between APM stations and the passenger terminals. Why was this analysis not done?
2. In proposing a "spinal" APM alignment in the CTA, it appears that LAWA has engaged in "pre-determination" of an alternative. The other alternatives included in the DEIR do not offer other APM alignments; it is as though the alteratives presented were "straw men" rather than feasible alternatives. Please explain how this selection of alternatives meets CEQA requirements?
3. ARSAC requests that LAWA consider building in a wye (three point train switch track) at the east end of the APM alignment in the CTA. The purpose of the wye would be to allow for LAWA to construct a future loop or double loop APM route in the CTA where the APM could be routed to all passenger terminals.
4. Historic Preservation- Theme Building. ARSAC agrees that the Theme Building be protected as a landmark. ARSAC encourages LAWA to find a new concessionaire to re-open the Theme Building as a restaurant and to have the observation deck open to the public.
   a. Why was Flight Path Learning Center & Museum listed as potential Theme Building tenant?
   b. Who at Flight Path did LAWA consult with before including a potential move to the Theme Building in this DEIR?
5. Historic Preservation- 1961 Control Tower. ARSAC agrees that the original "Jet Age" airport control tower should be preserved. As a part of this preservation, will LAWA reinstall the metal louvers that once clad the control tower to return the tower to its 1961 appearance?
6. Paleontological Survey. In Appendix A, PDF page 140, it is written, "Some areas were fenced-off and inaccessible during the survey; therefore, PCR could not thoroughly inspect these areas but they could be viewed from a distance."
   a. Why did the survey team not get access to the areas they needed to view? What efforts were made to make certain that access was granted?
   b. Why did LAWA pay for a report that was not complete where the survey team only looked through a fence and actually examined the soil of the subject properties?

ARSAC Alliance for a Regional Solution to Airport Congestion
8035 W. Manchester Ave., Ste. 710 Playa del Rey, CA 90293

   c. Does LAWA feel that the survey is adequate for CEQA compliance purposes? Or will LAWA have the survey updated before the Final EIR?
7. Upper Level and Lower Level Roadway user changes. At a recent BOAC meeting, staff had presented moving hotel shuttle buses and TNC's to the lower level. Other users would be confined to either upper or lower levels and a few could go to both. How does this proposal fit into LAMP if at all?

We look forward to your responses.

Sincerely,

Denny Schneider
President

racherman@netvip.com (310) 927-2127

Attachment A Evaluation of the Passenger Capacity at LAX

Here is year over year comparisons the last 10 using data from the LAWA.org website:

year	ops (000)	MAP	MAP/100K ops
2004 extrap	800	78.9	0.099
2008	558.4	59.8	0.107
2009	503	56.5	0.112
2010	520.7	59	0.113
2011	547.9	61.9	0.113
2012	549.9	63.7	0.116
2013	559.1	66.7	0.119
2014	578	70.7	0.122
2015	587.6	74.9	0.127
2035	850	96	0.113

*plugged in 96 MAP for 2035 estimate given by LAWA.

In 2004 (yr of the initial settlement) LAWA was limited to 78.9 Million Annual Passengers MAP)
this was a ratio of .099. This ratio increases every year since 2008 due to the introduction of larger aircraft and a higher load factor of more completely filled aircraft.
The last complete year, 2015, was 0.127. We would expect this to continue to increase as the load factors approach full and the aircraft coming to LAX grow in size. This is NOT the case of the LAWA estimate used of 96 MAP and 850,000 operations. This leads to a conclusion that the flight mix used for numbers of aircraft is questionable.

The total number of passengers is important on LAMP because it's the basis on estimating the number of vehicles entering the CTA and thereby impacting pollution and traffic counts. Given this number of operations assumed and the current load factor/size of aircraft would result in 107 MAP in 2035.

One or both of the numbers assumed are wrong...

Subject: LAX Landside Access Modernization Program – SUPPORT

Dear Ms. Quintanilla,

The Valley Industry and Commerce Association (VICA) supports the proposed Los Angeles International Airport (LAX) Landside Access Modernization Program (LAMP), which would enhance vehicular and pedestrian access to the airport.

As one of the largest international airports in the United States, we must ensure that passengers and visitors have convenient, affordable and reliable access to the airport facilities. Unfortunately, due to increasing demand, access to areas around the Central Terminal Area (CTA) have become severely congested. With LAX serving as the largest international gateway on the West Coast, VICA supports the proposed LAMP to improve passenger quality-of-service and provide world-class facilities for its customers.

In order to transform the airport into a modern airport, Los Angeles World Airports (LAWA) is committed to redeveloping ground access to the airport. We believe these improvements will provide seamless connections to major highway and public transit systems, easing traffic and congestion for all Angelinos. Without a direct connection to Metro, a consolidated car rental facility and alternative modes of transit access to the CTA – businesses and local residents will continue to face heavy traffic congestion.

Since 2004, LAWA has sought to address these concerns by proposing new facilities, infrastructure and system improvements to provide new options for passengers and employees accessing the passenger terminal areas. The DEIR represents years of collaboration and hard work to advance and transform LAX's access system. This plan will provide more certainty, reduce traffic congestion and improve air quality around the airport.

The project components – including the access to the Automated People Mover (APM), Intermodal Transportation Facilities (ITFs), Consolidated Rental Car Center (CONRAC) and a direct connection to Metro – will strengthen the region's economic standing and promote business growth throughout Southern California. By removing the number of vehicles within the CTA, LAWA anticipates improved traffic flow throughout surrounding areas of the airport.

LAX was created as a portal for economic investments throughout California. In 2015, LAX handled 655,564 aircraft landings and takeoffs. By enhancing the passenger experience with new access for all modes of transportation, Southern California is securing its place as an economic leader. Our local businesses rely on LAX to provide a connection to domestic and foreign markets around the world.

VICA is proud to support the LAX Landside Access Modernization Program as presented in the September 15, 2016 Draft Environmental Impact Report (DEIR). We believe LAWA has made a good-faith effort to communicate with effected stakeholders, mitigate potential negative impacts and put forward a strong proposal to ease traffic around LAX and promote economic growth.

Sincerely,

Kevin Tamaki
VICA Chairman

Stuart Waldman

CROWNE PLAZA
LOS ANGELES INTL AIRPORT

TAKE A MOMENT...

November 15, 2016

Los Angeles World Airports
Attention: Evelyn Quintanilla
One World Way, Room 218
Los Angeles CA 90045

Re: Comment Letter - Landside Access Modernization Program ("LAMP") EIR

Dear Los Angeles World Airports – Board of Airport Commissioners:

We are submitting this comment letter to Los Angeles World Airports ("LAWA") regarding the above-referenced Draft Environmental Impact Report ("DEIR") for the Landside Access Modernization Program ("LAMP").

The Crowne Plaza Los Angeles International Airport is located in the "Landside" area, at *5985 West Century Boulevard.*

We have concerns about and provide comments on the following issue:

Shuttle Issues:
We currently operate a shuttle into the Central Terminal Area ("CTA") to serve our customers and guests. Under the EIR with the implementation of "LAMP," it appears that we will no longer be allowed to pick up and drop off in the CTA, but instead will be limited to the Intermodal Transportation Facility West ("ITF West").

If the goal under LAMP implementation is to restrict vehicles within the CTA to reduce traffic congestion, it seems contrary to common sense that our shuttle buses - which hold scores of passengers - would be restricted from CTA access, while private cars, taxis, Lyft, Uber, limousines, which often carry only one or two passengers, would still be allowed access to the CTA.

Our comment and request is that LAWA reconsider this restriction to our shuttle access to the CTA under the LAMP implementation. Our shuttles are "aggregators" of passengers, whereas taxis, Lyft, Uber and limousines typically transport only one or two passengers per trip.

LOS ANGELES-INTL AIRPORT
T. 310-642-7500 F. 310-417-3608 E. W. www.crowneplaza.com/lax-intlapt
A. 5985 West Century Boulevard, Los Angeles, CA 90045-5463 USA

LAMP-PC00053

In the EIR's Table 17 of Appendix O of the Off-Airport Traffic Study, the table contains vehicle occupancy numbers during peak travel times that appear to be too low. Our shuttles are quite full during peak travel periods, despite what Table 17 reflects. Our comment and request is that LAWA re-examine these vehicle occupancy assumptions for shuttles during peak periods, and clarify or correct Table 17, which appears to be flawed.

The EIR indicates that private shuttles must *only* use the ITF West. Our comment and request is that private shuttles be allowed access to both of the ITFs, as well as to the CTA. If the goal is to reduce traffic congestion, then if one facility is full or congested, the shuttle buses should be allowed the flexibility of dropping off and picking up at any of these facilities.

Very truly yours,

Paul Gibbs

Re: Comment Letter - Landside Access Modernization Program ("LAMP") EIR

Dear Los Angeles World Airports – Board of Airport Commissioners:

We are submitting this comment letter to Los Angeles World Airports ("LAWA") regarding the above-referenced Draft Environmental Impact Report ("DEIR") for the Landside Access Modernization Program ("LAMP").

Our properties are located in the "Landside" area, at the addresses listed below.

- WallyPark, 9700 Bellanca Avenue, Los Angeles, CA 90045
- Airport Center, 5959 West Century Blvd., Los Angeles, CA 90045
- Joe's Airport Parking, 6151 West Century Blvd., Los Angeles, CA 90045
- WallyPark Express, 9600 South Sepulveda Blvd., Los Angeles, CA 90045

We have concerns about and provide comments on these issues:

Shuttle Issues:
We currently operate a shuttle into the Central Terminal Area ("CTA") to serve our customers and guests. Under the EIR with the implementation of "LAMP," it appears that we will no longer be allowed to pick up and drop off in the CTA, but instead will be limited to the Intermodal Transportation Facility West ("ITF West").

If the goal under LAMP implementation is to restrict vehicles within the CTA to reduce traffic congestion, it seems contrary to common sense that our shuttle buses - which hold scores of passengers - would be restricted from CTA access, while private cars, taxis, Lyft, Uber, limousines, which often carry only one or two passengers, would still be allowed access to the CTA.

Our comment and request is that LAWA reconsider this restriction to our shuttle access to the CTA under the LAMP implementation. Our shuttles are "aggregators" of

Attachment F.*1*.1

Construction – Criteria Pollutant and Greenhouse Gas Emissions

- Fugitive Dust Emissions
  - Emissions due to Demolition
  - Emissions due to Equipment
  - Emissions due to Grading
  - *Emissions due to Batching*

LAX Landside Access Modernization Program Project, Final EIR
Fugitive Dust emissions due to equipment use & material transfer

Fugitive Dust: 1 | Grading Dust: 0 < - - MANUALL TURNED OFF. GRADING IS REPRESENTED IN GRADING TAB.

LAX Landside Access Modernization Program Project, Final EIR
Fugitive Dust emissions due to grading

Source: Equation from USEPA, AP-42, Fifth Edition, Volume I, Chapter 11.9 - Western Surface Coal Mining, July 1998, Table 11.9-1

sf/acre = 43,560 | Fugitive Dust: 1

PM10 Emissions (lb/VMT) = 0.60 x 0.051 $(S)^2$
PM2.5 Emissions (lb/VMT) = 0.031 x 0.04 $(S)^{2.5}$

Where:
S = 7.1 mean vehicle speed in mph

PM10 Emissions (lb/VMT)	1.54
PM2.5 Emissions (lb/VMT)	0.17

Mitigation 61%

VMT = As/Wb x 43,560(sqft/acre) / 5,280(ft/mile)

Where:
As = varies acreage of grading site (acre)
Wb = 12 blade width (ft) CalEEMod default

This table assumes all disturbed area is to be graded. Not all grading below actually occurs on this project.

LAX Landside Access Modernization Program Project, Final EIR

LAX Landside Access Modernization Program Project Final EIR
Batch Plant Permit Consistency Analysis

Assumptions:
Delivery logistics provided in Connico Construction Assumptions PDF is accurate
All concrete deliveries occur during the construction phase of each project componer

LAX Landside Access Modernization Program Project, Final EIR

LAX Landside Access Modernization Program Project Final EIR
Batch Plant Permit Consistency Analysis

Assumptions:
Delivery logistics provided in Connico Construction Assumptions PDF is accurate
All concrete deliveries occur during the construction phase of each project component.

	Peak Total Concrete Demand (cy per month):	61,261
	LAWA Batching Permit Limits (cy per month):	70,000

Total Concrete Demand (cy per month):	Jan-17	Feb-17	Mar-17	Apr-17	May-17	Jun-17	Jul-17	Aug-17	Sep-17
	0	0	0	0	0	0	0	0	0

LAX Landside Access Modernization Program Project Final EIR

Batch Plant Permit Consistency Analysis

Assumptions:

Delivery logistics provided in Connico Construction Assumptions PDF is accurate

All concrete deliveries occur during the construction phase of each project componer

LAX Landside Access Modernization Program Project Final EIR

Batch Plant Permit Consistency Analysis

Assumptions:

Delivery logistics provided in Connico Construction Assumptions PDF is accurate

All concrete deliveries occur during the construction phase of each project componer

LAX Landside Access Modernization Program Project Final EIR

Batch Plant Permit Consistency Analysis

Assumptions:

Delivery logistics provided in Connico Construction Assumptions PDF is accurate

All concrete deliveries occur during the construction phase of each project componer

LAX Landside Access Modernization Program Project Final EIR
Batch Plant Permit Consistency Analysis

Assumptions:
Delivery logistics provided in Connico Construction Assumptions PDF is accurate
All concrete deliveries occur during the construction phase of each project componer

Attachment F.1.3

Construction Concentrations– Toxic Air Contaminants

- PM10 Inputs – 1 Hour and 8 Hour

Pollutant: PM10 , Concentrations, Units: ug/m3 , Emissions Averaging: Peak Month Average Day , Averaging Period: 1 Hour

Emissions Source: Break Wear (G001) Without Mitigation (no practical mitigation)			Emissions Source: Diesel Exhaust (G002) Without Mitigation			Emissions Source: Diesel Exhaust (G002) With Mitigation			Emissions Source: Fugitive Dust (G003) Without Mitigation (no practical mitigation)			Emissions Source: Gasoline Exhaust (G004) Without Mitigation			Emissions Source: Gasoline Exhaust (G004) With Mitigation			Emissions Source: Tire Wear (G005) Without Mitigation (no practical mitigation)
