Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient; Cair = Exposure Concentration
DBR = Daily Breathing Rate; ASF = Age sensitivity factor
EF = Fraction of Year; ED = Fraction of Averaging time
A = Absorption Fraction; FAH = Fraction of Time at Home
CF = Conversion Factor; CPF = Cancer Potency Factor

2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2017 Unmitigated Construction Through 2035 Operations - Lifetime Exposure
Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient; Cair = Exposure Concentration
DBR = Daily Breathing Rate; ASF = Age sensitivity factor
EF = Fraction of Year; ED = Fraction of Averaging time
A = Absorption Fraction; FAH = Fraction of Time at Home
CF = Conversion Factor; CPF = Cancer Potency Factor

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

2015 OEHHA Hazard Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations with 2024-2027 Unmitigated Construction - Lifetime Exposure, Residential Scenario
(Based on Peak Location of Residential Hazards[1])

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient; Cair = Exposure Concentration
DBR = Daily Breathing Rate; ASF = Age sensitivity factor
EF = Fraction of Year; ED = Fraction of Averaging time
A = Absorption Fraction; FAH = Fraction of Time at Home
CF = Conversion Factor; CPF = Cancer Potency Factor

2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations
with 2024-2027 Mitigated Construction - Lifetime Exposure, 70-Year Adult Resident Scenario
(Based on Peak Location of Residential Cancer Risks[1])

Equations
Risk = Cair*DBR*EF*CP*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

- Lifetime Exposure, Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Exposure Parameters	Ages 16<30	Ages 16<70
Worker 8-hr Daily Breathing Rate (DBR)	240 L/kg-d	230 L/kg-d
Fraction of Year (EF)	0.68 unitless	0.68 unitless
Absorption Fraction (A)	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m^3/L	0.000001 m^3/L
Age-adjustment (ASF)	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.01429 unitless	0.01429 unitless
Worker Adjustment Factor (WAH)	1 unitless	1 unitless

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

- Lifetime Exposure, Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Exposure Parameters	Ages 16<30	Ages 16<70
Worker Inhale Daily Breathing Rate (DBR)	240 L/kg-d	230 L/kg-d
Fraction of Year (EF)	0.69 unitless	0.69 unitless
Absorption Fraction (A)	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m³/L	0.000001 m³/L
Age-adjustment (ASF)	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.014129 unitless	0.01429 unitless
Worker Adjustment Factor (WAH)	1 unitless	1 unitless

Equations
Risk = Car*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Car / REL
Where: HQ = Hazard Quotient — Car = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

[1] Census tract was matched to air model grid points identified as residential or residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.04658196874087). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the cancer risk is the average of risk at within the census tract.

[4] Total cancer burden is the sum of individual census tract cancer burdens.

[1] Census tract was matched to air model grid points identified as residential or residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.04658196874087). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the cancer risk is the average of risk at within the census tract.

[4] Total cancer burden is the sum of individual census tract cancer burdens.

[1] Census tract was matched to air model grid points identified as residential or residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.04658196874087). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the cancer risk is the average of risk at within the census tract.

4 Total cancer burden is the sum of individual census tract cancer burdens.

[1] Census tract was matched to air model grid points identified as residential or residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.0465819687047). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the cancer risk is based on the average of risk at within the census tract.

4 Total cancer burden is the sum of individual census tract cancer burdens.
